## Quantity of Milk for a Pound of Butter. An important inquiry in the purchase

such fluids .- Scientific American

knitting wool, put in the choke of a fun-

nel, will do to filter any small portion of

and sale of a cow, is the amount of butter for which there are various reasons: one being that the owner of a cow may not have the conveniences for senarating one cow's milk from others in the dairy, or if the experiment is tried, it may be entrus ed to careless or unscrupulous or ignorant helps. It is therefore difficult to arrive at a correct result in this way; and we have found a much easier plan is to measure the cow's milk at each milking, which the owner, if he does not do the milking himself, may stand by and see thoroughly done and accurately measured. All that is necessary, then, to ascertain the quantity of butter per week, is to know the usual quantity of milk required for a pound of butter. This varies, of course, in different animals and with different breeds; but as an average, we should say, it takes eight to twelve quarts of milk to make a pound of butter. A cow giving twenty quarts per day, if the quality o not below the usual standard should therefore make two and a quarter pounds per day, or a little over twelve pounds per week. We have found that it takes less milk to make a pound of butter with a Jersey cow than any other breed. Six quarts of Jersey milk has sometime made it; but we put the average with this breed at eight quarts to a pound of butter. -C. L. Sharpless,

## Whitewashing Trees.

Do not whitewash the bark wpon th bodies of fruit and ornamental trees. We are at loss to know for what purpose some persons thus coat the bark of fruit and shade trees about their premises with lime, unless it is to make them look nice. It certainly does them more harm than good, as it serves to obstruct the respiratory of gans; and in a measure prevents thrifty growth. Should the bark become diseased and rough, or covered with moss. scrape it thoroughly with a hee or scraper of some suitable description; after which wash thoroughly with a strong solution of Dec.17,72-1y. soap and water. If this done properly every season, it will prove a great benefit, by destroying the insects which prey upon bark, and otherwise pron healthy condition thereof, and increasing the vigor and vitality of the tree .- Farm

## Lamb Soup.

Take the leg or neck and breast of lamb, which wash and put into a soup kettle with four or five quarts of water (according to the size of the family), one large er-cupful of rice, six or eight turnips, pared, washed and cut into small pieces, wo onions cut fine, a little sweet majoram with salt, black and red pepper to taste. After beiling over a slow fire about one lour, then pare and cut into quarters six r eight white potatoes, which wash, and dd with one table-spoonful of white sugar. and all age When nearly done, add a little parsley ainced fine, Then place the meat on a lish, which garnish with parsley, the soup

in a tureen, and send to table hot. This is equally nice, made precisely in the same manner as veal soup.

Aimond Sponge Cake.

One pound of sugar; twelve eggss; three quarters of a pound of flour; one ounce of bitter almonds (blanched), pound the almonds very fine, and pour on them four WANTED BOOK AGENTS for the table-spoonsful of beiling water; let them simmer for two or three minutes. Separ-

CERTAIN European chemists have shown why we should be careful about keeping fruit in our sitting-rooms or in a keeping fruit in our sitting-rooms or in a sick-room for any length of time. They have proved that, from the moment of plucking apples, cherries, currants, and other finits are subject to incessant transformation. At first they absorb oxygen, thus robbing the surrounding air of its vital element. Then they evolvo carbonic acid, and this in far greater volume than the purer gas is absorbed, so that we have poison given us in the place of pure air with compound interest. Temperature affects the rate of changes, warmth accelerating it.

AGENTS WANTED FOR THE FUNNY SIDE OF PHYSIC.

809 Pages, 250 Engravings.

An interesting and amusing treatise on the Medical Humbags of the past and present. It exposes the least acid, and the finish part of the purer gas is absorbed, so that we have poison given us in the place of pure air with compound interest. Temperature affects the rate of changes, warmth accelerating it.
