Oh, the sounding of the flail ? lever music can be sweeter Than the beating of the flail ? —Harper's Magazine. Pruning Fruit Trees. There is but one proper time for pruning I kinds of fruit trees, which is during or bout the period that the days are the ngest. The writer has pruned during every bouch of the year, and observed closely the fect of different seasons, and has become ally satisfied that the latter part of June the only proper time for pruning. If the mbs to be removed are cut as closely to be trunk, or larger limbs, as is practicable and the work be done at the period that I ave recommended, wounds two inches in ismeter may, on a vigorous tree, be en- rely healed over in a single year. No rehard of apple, pear or peach trees is senefitted by plowing or cultivating after the trees are five years old, but the ground hould be mulched with anything that ill shade it, and the mulching should al- ays extend from the trunk to a line from to to three feet larger than that covered y the heads of the trees. This keeps the artent moist and friable at the locality of the principal root feeders of the tree, and y extending the mulching beyond the has of the roots, they will be induced to then themselves. The benefit is too ap- arent to require any comment from me. Here is not a winter or spring-pruned or- hard in the country, the trees of which re twenty years old, in which many of the trees have not hollow trunks. This is coasioned by injudicious pruning. If the larger limb is amputated at the proper time, the wound will not heal ver, the wood of the wound will not heal ver, the wood of the wound will die, rake and admit rain water, which, when armed by the sun, combines the true ele- ents of decomposition, viz : heat and hoisture. Decay commences at the wood	EDINBURGH REVIEW, (Whig-) LONDON QUARTERLY REVIEW, (Conserva- tive.) WESTMINSTER REVIEW, (Liberal.)
