Salt for the Throat.

In these days, writes a clergyman, when diseases of the throat are so universally prevalent, and in so many cases fatal, we feel it our duty to say a word in behalf of a simple, and what has been with us a most effectual, if not a positive cure of sore throat. For many years past, indeed we may say during the whole of a life of more than forty years, we have been subject to sore throat, and more particularly a dry hacking cough, which is not only distressing to ourselves, but to our friends and those whom we are brought into business contact. Last fall we were induced to try what virtue there was in common salt. We commenced by using it three times a day, morning, noon and and night. We dissolved a large tablespoonful of pure salt in about half a small tumbler full of cold water. With this we gargled the throat most thoroughly just before meal time. The result has been that during the entire winter we were not only free from coughs and colds, but the dry, hacking cough has entirely disappear ed. We attribute these satisfactory re sults solely to the use of the gargle, and most cordially recommend a trial of it to those who are subject to diseases of the throat. Many persons who have never tried the salt gargle have the impression that it is unpleasant. Such is not the case. On the contrary, it is pleasant, and after a few days' use, no person who loves a nice clean mouth and first-rate sharpen er of the appetite will abandon it.

It would be very strange if this was not the case; for this soil, even if ever so mellow, is raw, just like manure when it is green or long. It is not yet converted or changed into plant-food. It needs just what the long manure needs-to he changed by the heat and the air-that is, decomposed or rotted. When the top-soil is less fertile than it

used to be when the land was first tilled, you may rest assured that this under soil is always better than the upper soil because the upper has deteriorated, while the under has not, but rather improved. It is, therefore, inadvisable, nay suici-

But turn it up in the fall, and let the frost and the elements take hold of it, and you have another soil; it is turned into manure, a good part of it. A little lime mixed with it, scattered and harrowed in, or manure, or both, would facilitate the process. In the spring sow, either with or without another ploughing, and you will find no more occasion to complain. We have great fertility to draw upon from below, but it requires managing.- Evening
