The city was shocked by the uurder of a young girl by the Jew, Ru-benstien, under poeuliar revolting eirean-stances, which was followed by the slaught-er of Simmons by Fuchs. That case is the most horrible on record. The murdered man was made drunk, so drunk as to be unconscious. Then his murderer deliber-ately chopped his head off, and, cutting his body into small pieces, backed the most of it in a cook stove till it could not be distinguished from any other meat. If had got the body almost finished when he was interrupted. The head and one leg remuined, and by these the crime was its covered. MENT.</b>	Alcohol was invented 950 years ago by the son of a strange woman named Hagar, in Arabia. Ladies used it with a powder to paint themselves that they might appear more beautiful, and this powder was called alcohol. During the reign of William and Mary, an act was passed encouraging the manufacture of spirits. Soon after, intemperance and profligacy prevailed to such an extent, that the retailers in intox- icating drinks put up signs in public places, informing the people that they might get drunk on a penny, and have some straw to get sober. In the sixteenth century, distilled spir- its spread over the continent of Europe. About this time it was introduced into the colonies as the United States was then called. The first notice we have of its use in public life, was among the laborers in the Hungarian mines in the fifteenth cen- tury. In 1751, it was used by the Ea- glish soldiers as a cordial. The alcohol from Europe was made from grapes and sold in Italy and Spain as medicine. The Genoese afterwards madeit fromgrain, and sold it as medicine. During the reign of Henry VII, brandy was first known in Ireland, and soon its alarming effects in- duced the governor to pass a law prohibit- ing its manufacture. About 120 years ago it was used as a beverage, especially among the soldiers in the English colonies in North America under the preposterous notion that it prevented sickness, and made men fearless in the field of battle.— It was looked upon as a sovereign cure.— Such is a brief sketch of its introduction into society as a beverage. The history of it is written in the wretchedness, the tears, the groans, the poverty and murder of thousands. It has marched througen	cold toward him that he did him more harm than if he had actively opposed him. The poor outcast, who is so not by his own action, who is driven from door to door and fed on what dogs refuse, who receives no refreshing food or rest in all his weary travels, nor a word of comfort from any creature in the form of men, requires de- fence. What crime has he committed that he must be arrested and put to "hard labor," "smash- ing stones on the streets," er be bound to a soulless individual or corporation ? The birds of the air are invited to partake of your dainty feast, but he, who is your fellow man, must be arrested, and for what? <i>Because he is poor</i> ; because you have denied him a place to dis- pose of all he owns—his labor—and to keep his useless soul and body together he begs your ordinances and must be dealt with after the mauner of your willing criminals. Shame upon a nation of freemen that cannot provid	So there is, but we cannot tell you of any plan that is cheaper, nor of any plan by which even dogs can be fed without expense. PHILANTHROPIC. The fammine quotation from Byron does not partale of the nature of argument, yet penetically. "When Berkley aid there was no matter. "Tax then no matter what so matter." "When Berkley aid there was no matter. "Tax then no matter what so matter." "Whatley's "Historic doubts concerning the existence of Napoleon Bourparts." is nother illustration of ingenious reasoning, but it accomplished its object as a mine upon the doubts of undeitevers in the analytic doubts of undeitevers in the analytic data as a metaphysical production. In our own time there has been some progress in mental science, but the progress is due not to the mataphysical production. In our own time there has been some progress in mental science, but the progress is due not to the instephy- sician but to the physiologist who with the scalpel and the meroscope has ez- plored the nertox system in all its devel- opments, from the nellusen to the highest orders of mammalia, including man. The physicist has succeeded where the physhist has failed. The pure physicist records before that true theology is not incomes- ent with nature. This was the style of Golike and all true vataries of science, and religious feeling has progressed with cience, proving that the religion of Jesus Christ has nothing to far from the pro- gress of science, but is rather conditued ustrengthenesi by it than otherwise. Metaphyseis is but little else than the stablest has been exhausted in the hype of ages by the multitude of students. The physicist is coment to study facts, the results of actual observation, he gen- ericeded observations. Eis materials are inchanstible, being coreal with universal
