Think how poorly off you would leave your wife and child if any thing should happen to you, and what thing should happen to you, and what would become of your wife if anything should happen to the child?" "Do not mention it."

The old lion in the cage, though a nonster in size, was inoffensive, tame and obedient. In the language of the keepers, he was "good for nothing but to make show and sit back in the corner, grind his teeth, and growl." Besides, he was his friend, and upon more than one occasion had acted the part of a peacemaker. The leopards-a pair of spotted cheetahs-were scarcely to be taken into consideration .-The black tiger, the most rare and strikingly beautiful animal in any collection, was ordinarily quiet, though when fally aroused not to be trifled with.

But the lioness was the special one to be dreaded and watched. She was a beast of uncommon power, with massive arms, long curving claws, tail lithe and nervous as a serpent, teeth sharp as needles, flexible, treacherous, smooth, tawny skin and yellow eyes that ever flashed fiercely .-Never, even in her best moods, had she been submissive, and her mildest play was

"Oh! I'll look out for number one."

The conversation did not tend to ease his mind, and before dressing he went out and held another conversation with his particular attendant, and took another look

into the performing cage.

The animals were more quiet than when he had seen them previously, the lioness especially appeared in a playful mood, and with something of the load lifted from his heart he returned, with but little time remaining before he would be called upon to prove his right to the proud title of Lion Tamer.

And every inch he looked one as he stepped in view of the densely crowded assembly. Gorgeous in his new costume, and with a look of calmness and determi "But the trouble commenced with this nation upon his face-looked, with his same lioness."

The lioness grumblingly arose, crawled suddenly to his feet, rose and laid her great claws upon his shoulders, making him swerve with her weight, and raising her terrible head upon a level with his own. Slowly and slowly they turned round as if waltzing, the low mutterings of the beast becoming more plainly audible every mo ment, and her yellow feline eyes snapping with hidden fires.

With an amazing exhibition of strength, he wrestled with, tripped and threw her from him, and the canvas tent rang again. But instantly she was upon her feet, lashing her sides with her prehensile tail, drawing back her lips so as to show her teeth, and uttering the deepest and fiercest of growls.

Lame torn and weak the Lion Tamer entered the cage the next day before the most unprecedented crowd, it having been dvertised that he would do so in his bloody clothes, but never again could he be tempted to take child or pail of blood behind the bars.

Hints on the Care of the Eyes,

There are, perhaps, more individuals who ascribe their weakness of sight to a use of their eyes under an insufficient artificial illumination than to any other one cause. In a great many instances this may not be strictly true, but there can be doubt that faulty artificial light is one of the most productive causes of a certain class of injuries, to which the eye can be exposed. The two sources of trouble with the ordinary artificial lights are-first, that they are not pure white, and secondly, that they are unsteady. The first defect is found in all artificial lights except the lime, electric and magnesium lights; the second especially in candles and gas. The lime, electric and magnesium lights; the second especially in candles and gas. The vellowness is, in a measure, counteracted by using, in the case of lamps and gas, himneys of a violet or blue tint, and the flickering of the gas may be obviated largely by employing an Argand burner. All hings considered, a German student-lamp furnishes the most satisfactory light. The next best is gas with an Argand burner. The chimneys of both may, as above suggested, be advantageously of a light-blue

The position of the light in relation to the body is of great importance. If a shade is used on the lamp or burner (it should, by preference, be of ground or "milk" glass, never of colored glass), the light may stand directly in front of the body and the work be allowed to lie in the light under the shade, which will protect the eyes from the glare of the flame. If no shade is used the back should be turned to the source of light which ought to fall over the left shoulder. The same rule applies in the management of daylight. In this case the light should come from behind and slightly above, and fall directly on the work, whence it is reflected to the eye. It should never fall directly in

The light in the room during sleep is also not without its influence. As a rule, the room during sleeping hours should be dark; and, in particular, care should be taken to avoid sleeping opposite a window Even the strongest eyes are, after the repose of the night, more or less sensitive to

EATH OF THE HEAD OF THE CHURCH OF SAINTS-HIS WONDERFUL CAREER. SKETCH OF THE SECT OF JOSEPH SMITH Brigham Young died at his residence, in Salt Lake City, on Wednesday of last week, from an attack of cholera morbus. For the following obituary of the dead Prophet we are indebted to the Philadelphia Times of the 30th ultimo:

The renowned ruler of the Mormons of Utah, who died yesterday, was born in the remote end of a very long tube, and, with even in our own beautiful State.

Yesterday af-ternoon, a *Chronicle* representative being at either end of the wires-one at each of the above described boxes—communication was established. The word "Hello" was called into the Fourth avenue box, and directly a still, small voice answered at the ear, "Hello, what do you want?" The tones came as though the speaker was at the remote and of a very long table and

after the ear had become somewhat familiar with the unwonted sounds, they were very distinct and satisfactory. Even the different qualities in the voices of different persons could be noted. The whistling of an air was also transmitted clearly. speaking, all that was necessary was a clearness of utterance, and in listening, an electricist of the ear was requisite. The alertness of the ear was requisite. The mechanism of this wonderful machine is mechanism of this wonderful machine is simple in its construction, but the manner in which the telephone does its work requires some familiarity with the electrician's profession to clearly comprehend. In the Bell telephone, the vibrations of the air caused by the voice, agitate or vibrate a disk of thin iron, precisely as sound waves vibrate the tympanum of the ear. waves vibrate the tympanum of the ear. In the latter organ, back of the tympanum, lay the complicated organs of hearing. In the Bell telephone, just back of the iron disk there lies, at right angles to it, a magnetized bar of steel, or permanent magnet, whose ends project to within a very small distance of the metal disk. When the latter is vibrated by the air waves produced by the speaker's voice, this small distance

receiving disk, acting as described in combination with the magnetic quality of the bar of steel, produces the results attained by the instrument.

Through its infancy, this morvellous invention can be made available in the mest practical manner, and all who desire to inspect the device and test its powers, are invited by Mr. David to step into his office in the First National Bank building and take the evidence of their own senses.
With the Bell telephone, distance virtually amounts to nothing. The manufacturer, in his office can issue verbal orders to the foreman or manager at his mills away as readily as though the two were on opposite sides of a desk. In fact, this device gives miles of slender wire the capacity and communicative power of a few teet of speaking tube, and its applicability to. business purposes seems almost endless. — Pittsburgh Chronicle.

## A Terrible Experience.

rible example of the use of opium. Henry L. Sanford is now twenty eight years old and began to take morphine about seven years ago, because whisky did not satisfy. "That," said he to a reporter of the World, "had a splendid effect on me, make me lively and ambitious, and gave me an amount of happiness I cannot express to you. It transformed me at once. I became strong and independent. Nothing was too hard for me to undertake. I speculated and made lots of money. At the end of two years my sufferings began. He went to the lunatic asylum, but could not be cured. He soon went up to 45 grains a day, and began taking it by injection, for it had ceased to have any effect if taken through the mouth. He had used a hypodermic syringe, but losing this got a common syringe, which he could not insert into the flesh without first cutting a hole. He used to take a razor and cut a gash in his thigh and then with the scissors bore a hole into the flesh, into which he would insert the syringe and inject the morphine. During the last two years he has taken over sixty grains a day, and has often taken over one drachm which is equal to five hundred grains of opium. He is in jail for stealing surgical instruments, which he disposed of to purchase the poisonous drug, and he describes his sufferings thus: "If I wasn't so help less I'd soon be out of this hell I'm in. I have no fear of the next world. There is nothing in this for me. For over two years I have been dead. There is no blood in me. I can eat nothing, and that which would keep life in me I cannot get. Even when asleep I have no rest. I am constantly dreaming of being thrown in among a lot of dead and being compelled to east their flesh. I know when I wake up, when asleep I have no rest. I am concovered as I am with cold perspiration, that it is but a dream, but the effect of makes my desire for morphine a torture. I would kill my own father in a minute it I could get enough for one dose. When the desire comes on me I would not ex-change the morphine for Heaven. Give me the dose and then hang me if you like.
