Now it is known that gambling has been one of the most fruit ful agents that the devil has even had to ful agents that the devil has ever had to strengthen his kingdom and operate against the kingdom of Christ. And may we not supse that church fairs and festivals are a de ice of the devil to introduce gambling into the church? Any one familiar with church fairs knows that many of them are made up of games of hazard or chance, so that the parties engaged in them would really be indictable according to our present statutes. Almost any plan or mean is resorted to at some of these church fairs in order to get the money. Some few years ago a well known church in this or currous information; "French Home Life.

The arguments, in relation to the first of these questions, lead to the belief that memory—simple, undiluted memory—should receive but little culture, and that all efforts should be made towards developing the reasoning powers of the mind. It would be interesting child the name of the first letter of the alphabe by a train of reasoning. There are four methods of obtaining knowledge. By simply Probably the most popular thing in the Number is Will Carleton's humorous and nathetic near 100 memorizing; by reasoning; by experiment and by observation. But the queen of the memory one fact in One fact in connection with this question is generally overlooked, or unobserved, and that is, how much of our learning is due to memory and how little to reasoning. A survey of the field of science will make this truth very plain. It is true, in mathematics, mechanical phiosophy and astronomy, many unknown facts may be discovered by reasoning; but even in these, memory bears the most important part for how could we explain the properties of the right-angled triangle if we have forgotten that a triangle is half of a parallelogram? But our known; but reasons are not reasoning. The John Esten Cocke's story, "Moonshiners"— child, in the first few years of its life, learns the scene of which is laid in the mountains of Western Virginia, with two hrilliant illustraory. It learns to read by the same method. As it advances in years it learns grammar, geography, history, botany, chemistry, natural history, geology, and a host of other branches of science, not by any process of reasoning, but by simply rubbing the mind against them until an impression is made that will remain. of science, not by any process of reasoning, but by simply rubbing the mind against them until an impression is made that will remain. The mechanic's arm is strengthened by use, so is the mind; and this being true beyond doubt, the surest way of establishing a good memory is, by a continued and careful memorizing of facts in a methodical manner. If we want a tree and set our eyes on the forest we shall never find what we want. But if we enter the forest and look carefully at every tree we shall not only find our tree, but know what is there beside. Again, the mind can not be kept vigorous without action. That person who
