THE NEUTRAL LINE .- Magnetism as a Motive Power and Generator of Electricity—In changing the derview with W. W. Gary, the Discoverer and third person. W. Gary, whom Huntingdon is proud to claim as one of her citizens, his experiments and re-searches having been mainly conducted at this

place, has, by his discovery of the neutral line in the magnetic field, set the scientific world overdose of bad whiskey, or worse beer slop, threw up the contents of his stomach on in commotion and enlisted the interest of that ore practical class of men who are on the lookout for a cheaper motive power than steam, a more convenient method of obtaining the electric current for telegraphic purposes than We understand that arrangements have been from a battery, and for the removal of the great obstacle in the way of the general introthe Huntingdon firemen will be lurnished transportation at the rate of one cent per mile on the occasion of their visit to Harrisburg on the occasion of their visit to Harrisburg on the 4th prox. The steamer, together with her engineer and firemen, will be transported free of charge.

A "back streeter" wants to know when Council will put in the-long talked-of cisterns line, the discoverer himself is quietly progress town. we are unable to impart the desired information, but presume if he calls upon Councils, at their next meeting, they will give to him. annot be obtained. It is not the purpose of this article to engage in this controversy, except, in the unobtrusive way in which Mr.

FIRST EXPERIMENTS.

The discovery by Mr. Gary of a fact in magnetic science which had escaped the observation of all other investigators was not an accident, but was the result of long years of la-bor. In his boyhood his attention was attracthis young mind led him to the pursuit of them myer, who has trundled a wheelbarrow from San Francisco, arrived in Johnstown on Sun-Y., where the son was born in 1837. When the latter was nine years of age the electric Capt. McLean, of Gen. Beaver's staff, in- and electro-magnet by way of illustrating the that somewhere else than in electricity, perhaps in magnetism itself, might be found the con erting influence he desired, and, consequently

he power he conceived to exist. WHY HE CAME TO HUNTINGDON In 1873 he came to Huntingdon for the pur ose of finding, in comparative seclusion, the ractical demonstration of the truth of his ew theories. He took up his residence in West Huntingdon, far enough from the busy part of the town and from neighbors, as he supposed, to be undisturbed; and there, for a year or two, he experimented and investigated until success crowned his efforts, without the outside world knowing what he was at. The fact which he took as the basis of his researches was that if a magnet moving upon a pivot in its centre was brought near another magnet, their poles being opposite, it would be attracted, and that when the latter was withdrawn the pivoted magnet would return to its place. From this fact he drew the deion that if he could neutralize or destroy the attractive power of the magnets for each other, and restore it at will, he could produce motion by that means. His object, therefore, was to discover a "cut off," as he called it then and as it became known afterward to others; that is, a method of intercepting the magnetic influence within its own field. He observed, while thus engaged, that an "iron bar which was held across, above, and near the point of the poles of the magnet," as he has described the experiment himself, "would worthed across, above, and near the point of the poles of the magnet," as he has described the experiment himself, "would so unfortunate one this time was John E. Morgan, in company with a sum townsman, Mr. John Morgan. It was the intention of young Morgan, in company with another young man of this place, William Himes, to go to Huntingdon on a freight train; and, as the trains usually run very fast through Mount Union, they went down to what is familiarly known as the "deep cut"— has described the experiment himself, "would to summon from among us, by death, our worthy Brother Pearson, therefore, Pearson, wherefore, Pearson, and appreciate what he has done for us as a Lodge and for our cause as an order; that we yield submission to the will of Him who doeth all things well.

Resolved. That the members wear the usual the point of the poles of the magnet," as he has described the experiment himself, "would sustain an iron nail when near the magnet, they might board the train to a better advantage of the poles of the magnet, and they might board the train to a better advantage of the poles of the magnet, and they might board the train to a better advantage of the poles of the magnet, and they might board the train to a better advantage of the magnet, and they might board the train to a better advantage of the magnet, and the magnet of th

A NEUTRAL LINE, where the induced magnet was neutral, not a not be too heavy for the armature or induced

magnet, will cling to it with an inclination toward the permanent magnet, showing that the nail has a polarity opposite that of the latter. As the armature approaches the magnet, it will reach a line where the attraction between it and the nail ceases, and they will separate, the nail falling to the earth. from it, proving conclusively that there has been a change of polarity, the nail being, in this last stage of the experiment, of the same polarity as the magnet. If the armature be moved upward, the nail will again drop on reaching the neutral line, and be attracted afterward.

pendulum or swinging, and a rotary. Heretofore, this has been done by revolving the armature in front of and close to the poles hich it does twice in each revolution. produce a constant current it is necessary for it to revolve so rapidly that the time from its assage from the neutral line back to it is apperceptible; in other words, it must be nstantly, or nearly as that is possible, at the oint where the pelarity changes. This rapid otion can be produced only with an engine f several horse power. The only machinery hat Mr. Gary will require in causing the ibration of his armature will be one of his own magnetic motors. In telegraphing, the lever to which the armature will be attached will be vibrated with the fingers, just as the key of the present telegraphic instrument is

moved.

HOW THE INVENTION IS TO BE BROUGHT INTO and good on earth, we rejoice to know A number of gentlemen of this place and Boston, having formed a company for the have washed their robes and made them white NOTICE. purpose of bringing some of these inventious in the blood of the Lamb, there securely to into use, I called upon Mr. Gary, at his work-dwell with the blessed Lord forever. The

purposes where a small current of electricity is required.

A NEW SYSTEM OF TELEGRAPH He has invented a new system of telegraph ing, to be used in connection with his magneto electric machine, the details of which he did not like to give until secured by patent. He latter may be in charge of any person who can read. Although his machine produces enough electricity with small magnets to operate a telegraph sounder at a distance of smaller current will be sufficient, no more being necessary than will deflect the needle; and this current will telegraph across the continent by the mere pressure of the finger upon the key. The letters of the alphabet will be used instead of the Morse alphabet,

He proposes to do away with batteries and o use permanent magnets, from which he The method

The method He proposes to do away with batteries and be use permanent magnets, from which he fill obtain induced currents. The method able colored man of this place, was seriously injured by the falling of a scaffold, at the new school building, early on Monday morning.

DASTARDLY CONDUCT .- We are inbor. In his boyhood his attention was actism, ed to the subjects of electricity and magnetism, if, indeed, they are separable into more than if, indeed, they are separable into more than give exhibitions of their proficiency in black guardism, and from what we have been able to they succeeded most admirably. as a study and to a wonderful success to a study and to a wonderful success to a study and to a wonderful success to a success to a study and to a wonderful success to a succ tor. After a brief conversation one of the Huntingdon boys invited the party up to the clegraph was in its infancy, and his father, or lectures delivered by him, used a battery of humor each one of them poured out a quantud electro-magnet by way of illustrating the tity of poison and gulphed it down. After Capt. McLean, of Gen. Beaver's stan, inspected Company D, in this place, on Satur-spected Company D, in this place, on Satur-day evening last. Being without muskets, and only a few of the members uniformed, the inspection was rather a tame affair; but what there was of it we understand was highly sattered was of it we understand was highly satwhich the power of the magnet, which was then regarded as one of the static forces, might be converted into energy or dynamic power. He had just made. They were considerably conentertained this idea during the next fifteen fused by the force of the blows, and by the years, and, although he applied it in his first time they had sufficiently recovered to take in inventions for the employment of the power of permanent magnets, he advanced far beyond it at the end of that time. It then occurred to him did not pretend to follow them, but continued on up street, and while on their way home met four or five of their young friends and verting influence he desired, and, consequently about ten years ago, abandoning all occupation, he devoted himself to the discovery of had related the story of their wrongs and the brutal attack made upon them by these cow ardly blackguards, their friends started in pur suit of them, and at some point on Allegheny street came upon them, when they at once proceeded to "put a head" on a couple of them, but was prevented from giving them the drubbing they deserved by the interference of the railroad police. Before that officer could prevent it the drunken, cowardly blackguards had each received a black eve in pay ment of their base assault upon two of the most inoffensive young men of our town. If the same party comes this way again, for another drunk, and behave as they did on this occasion, we can assure them that the "Gilli gans" will attend to their case as it should

> sad and fatal accident happened to a young man of our town on Saturday evening. other, and restore it at will, he could produce motion by that means. His object, therefore, was to discover a "cut off," as he called it then and as it become known afternoon of the country of the cou they might board the train to a better advan-tage. About seven and a-half o'clock an exwould be running a big risk. But at the same time young Morgan walked down about ten or fifteen yards below Himes, and unamagnet at all." The experiment by which this wares to the latter, made an attempt to board discovery was made may be tried by any one. His remains were carried to the cemetery below town for interment on Tuesof people. The stricken family have the sympathy of the whole community. pathy of the whole community. This is another sad warning to those who persist in jumping on the cars.—Mt. Union Times, 20th

SAD DEATH BY THE CARS .- Another

THE COMING CAMPS .- A writer in the Philadelphia Sunday Times has this to say of Same date last year ...... Same date last year ...... will soon be in geason. Already the Metho dist papers are full of announcements of them It would not be possible in this article to describe the various applications of the change of the club ought to secure the best man in the lot. A little Huntingdon girls.

The would not be possible in this article to describe the various applications of the change of polarity in an induced magnet as a motive power. It will be well understood from what has preceded that the magnet becomes alternative and holday. Most of the people who visit the nately an attracting and repelling power, and is no longer the dead force that magnetism many come just for the fun of it. Many has occurred on the E. B. T. R. R. for a long time, happened passenger engine No. 4 on Tuesday. Mr. Charley Allen engineer and believed to the considered. From it has been obtained as was considered. From it has been obtained as walking-beam or reciprocating motion, a bendulum or swinging, and a rotary. ing on the only day of leisure which they have in all the seven. Good Methodists ob Not the least valuable of the many application's of Mr. Gary's discovery is that for the generation of electricity for the telegraph and the electric light. If the armature be surrounded by a coil of insulated wire, and then placed over the neles of a magnet, a current of the many application's form of electricity for the telegraph and the electric light. If the armature be surrounded by a coil of insulated wire, and then placed over the neles of a magnet, a current of the many excellent people favor the largest likerty in Sunday admissions. Regarding the caup meeting not merely as a means of grace for the mature Christians, who are its promorounded by a coil of insulated wire, and then placed over the poles of a magnet, a current for the mature Christians who are its promo of electricity will be induced whenever the armature is moved to or from the neutral line, sinders, even though they be an unrighteous and the space through which it must move to effect this does not usually exceed the eighth of an inch. The rapid vibration of the armature, which may be made with the exertion of very little power, will give as constant a current as is now obtained with one of the meeting to which Sunday visitors are admitlight. It is well known that the light has been impracticable for general use on account of the expense of generating the electricity. perhaps it is the best to close the gates. Bu there is the great outside public clamoring for admission and willing to listen to the Gospel of a permanent or electro magnet, the elec. The controversy goes on between the advoricity being generated when the armature cates of opening and closing, and looks as i asses the neutral line between the poles, it would be particularly lively about mid-To summer.

THE DEATH OF ANNIE RALSTON .- IT last week's issue of the Journel we published a notice of the death of Miss Annie Ralston, daughter of our esteemed friend, Samuel Ralston, esq., of Warriorsmark. Since then we have come into possession of the following tribute to her memory, read in the Warriorsmark M. E. Sabbath School on Sunday after-

noon, the 15th inst:
"In the Providence of God, death has visited the circle of our Sabbath School in the taking away of Annie Ralston, one of our best and most beloved teachers.

A CHAPTER OF ACCIDENTS .- Charlie changing the pronoun from the first to the third person.

The company was organized to manufacture and sell his magneto electric machine for the production of electricity for telegraphing, railroad signals, call bells in hotels, and other purposes where a small current of alcatricity. boat mule, was thrown from the animal, on Thursday afternoon of last week, and had one

of his shoulders severely bruised. Mrs. John Brisbin, of Kishacoquillas Valley, then on her way to Allenville, in company with her brother, on Thursday of last week, was thrown from the wagon, by the horses taking fright and running away, and had one of her legs broken in two places, besides sus-taining internal injuries from which her life is despaired of. Mrs. Brisbin formerly resided in this place, and her many friends here will be sorry to hear of her misfortune.

From our friend, Judge Clarkson, we learn that on Saturday last A. W. Pheasant, of Cass township, had his left leg broken below the knee. Mr. Pheasant was hauling rails, and coming to a tolerably steep hill he jumped from the wagon for the purpose of drawing the rubbers, and in doing so the presumption is that one of the rails fell off the wagon and will be used instead of the Morse alphabet, and consequently any letter may be made with struck him on the head, knocking him down, and in falling his leg got under the wheels. Besides the broken bone, the flesh is crushed and lacerated, and fears are entertained that present.

school building, early on Monday morning.
The scaffold was about eight feet long and pretty well filled with brick, which the "tenders" had placed there before the arrival ormed that a party of roughs, said to hail of the brick-layers, so that they would not be rom Tyrone, landed in our town on Philadelphia Express, on Friday night last, and as soon as they got off the train they started for cended the ladder with a hod full, and stepthe first drinking saloon that came under their notice, where they filled themselves with villainous whisky and then started out to villainous whisky and then started out to some eight or ten feet. He retained hold of the control o his hod, which we believe was the means of guardism, and from what we have been able to learn they succeeded most admirably. About eleven o'clock they staggered into the bar-room of the Jackson House, where they met a couple of young men of our town, and both the upper and lower jaw, knocked out. Besides these injuries he complains of his breast and one of his arms paining him con siderably. He made a very narrow escape

It imparts glossiness to the dandruff and making the hair grow luxuriantly where it is scattered and scant. It imparts glossiness to the dandruff and making the hair grow luxuriantly where it is scattered and scant. It is not the scant and the scant and the scant and by my portrait, my hair is growing out luxuriantly, and I soon hope to have a near of mark as in myyouta-ful days. Will do just as recommended, used as directed, or money refunded.

LAS GO COLOGNE de SANDALINE is the concentrated essues of the Sandal Tree, to which is super-

nterweaving of ingredients, the most exquisite perfunes about the to the world an article, at once grateful and enjoyable. In the Tollet boasted traditions of the harem. The Eau de Cologne de Sandnare we whence it has been carefully extracted. To the Invalid it will be reever and whenever used a most salutary perfune. It is put up in engraved, and covered with rich Satin, handsomely labelled. It has is of Europe, and received the indorsement of the Crowned Heads alded to the continental potentates by Eugénie in the painty days

of the Old World, first heralded to the continental potentates by Engenie in the palmy days of the regime of Napoleon III.

Price, SLOD per bottle each. Supplied through Pharmacists and Fancy Goods Dealers.

DR. GOUNOD'S GREAT MEDICAL WORK,

This indispensable volume is a carefully prepared Treatise, covering over 250 pages, and comprehended within a portable compass. It contains the most valuable information ever imparted the human understanding. It touches upon every conceivable subject, the Anatomy and hysiology of the Body, the diseases that affect it, how they may be avoided, and how cared. It points ut the hindrances that often stand in the way of matrimony, and gives the remedies for their removal. It is contained the containty becomes assured. In short, it enables each individual to become his own Physician.

The Price, \$1.00 a copy. Postpaid on receipt of money.

I am willing to stake my Professional Reputation as a Physician on the merits of all ne above.
