LIVER COMPLAINT.

This disease is discovered by a fixed obtuse pain and weight in the right side under the short ibs, attended with heat, uneasiness about the ribs, attended with heat, uneasiness about the pit of the stomach,—there is in, the right side also a distension—the patient loses his appetite and becomes sick and troubled with consting. The tongue becomes rough and black, ccunt mance changes to a pale or citron color or yellow, like those afflicted with jaundice—difficulty of breathing, disturbed rest, attended with a dry cough, difficulty of laying on the left side—the body becomes weak, and finally the disease terminates into mother of a more serious insture, which in all probability is far beyond the power of human skill. Dr. Harlich's Compound Tonic Strengthening & German Aperient Pills, if taken at the commencement of this disease, will check it, and by continuing the use of the medicine a few weeks, a perfect cure will be will check it, and by continuing the use of the medicine a few weeks, a perfect cure will be performed. THE public are informed that the subscriber has bought the right of the above water which, for the state of Pennsylvania. It is considered by those having them in use, as one of

MICHAEL M'MATH.

This is to certify, that I have put in one of Howd's Patent Cast Iron Direct Action Water Wheels, in the place of a Reaction Wheel; that the Direct Wheel does not flood the tail race as much by three inches as the reaction did, and that I can grind seven bushels with the direct action wheel an hour, and drive two run of stones, where I could not grind four bushels in the same time with the reaction and drive one run of stones.

Alloway, May 5, 1838.
This may certify that I have been engaged in putting in S. B. Howd's cast iron direct action Water Wheel, both in the State of New York and in Michigan, and can give it as my decaded opinion that with S feet head or under, rightly put in, it will do more business with the same water than any other water wheel which I have yet had any experience in, and in reference to back water, is second best to none that I have yet tried. In reference to guarding against ice; there can be no better operation, and it is very easy to be kept in repair.

Alloway, September 3, 1838.

This may certify that I have had in my Mill one of Mr. Howd's direct water wheels for the space of one year. It is a five feet wheel, and I have had a re-action in the same place—I have also had Wheeler's Union Wheel, yet I think Mr. Hawdy will do more business with her with Mr. Howd's will do more business with less water than any other. I have tried. It does well in back water. I have had from 5 to 6 feet head. I think we could do as much work with half the water as we used to do with the under shoot wheel, which has also been in operation in my mill.

LAWRENCE RILEY. in my mill.

Lyons, September 3, 1838.
This may certify, that we have used one of S. Howd's patent water Wheels since December last, by the side of a re-action wheel; and we think that Howd's will do double the business, with the same water that the reaction wheel will do or very near. We never have but three feet head, and can grind with that eight bushels per hour. We are subject to back water. This wheel will do as good business under back water as the re-action, and we recommend it to the arrention and patronage of the public.
