

UNROLL THE GLORIOUS BANNER.

Unroll the glorious banner,
Let it fly upon the breeze,
The emblem of our country's pride,

SCARBOROUGH.

This is the time of year for our cornfields to exhibit all sorts of artistic ingenuity in the shape of old clothes stannary, and very odd and expressive tableaux, as well as a great amount of never-ending twine-glittering pieces of tin hung on poles by ever twisting and untwisting strings—old coffee pots, and dilapidated hats: all to intimidate every snail, but sagacious bird, the crow.

PHILADELPHIA COLLEGE.

This is one of Eight Colleges constituting the "National Chain," located in Philadelphia, New York City, Albany, Buffalo, Cleveland, Detroit, Chicago and St. Louis. Scholarships can be purchased at either point, good at all the Colleges.

Executions in Japan.

A letter from Jeddo (Japan) in the "Aurifer" contains the following passage: "Executions are very frequent in Japan, and at Jeddo scarcely a day passes without one. Beholding and ripping open the abdomen are the most usual punishments inflicted. The best mode that the murderers of a prince were executed to death in a large kettle. The other modes of execution to which the Japanese tribunals attempt to terrify criminals, are crucifixion, cutting open the chest, breaking up limbs with iron bars, exposing the criminal to the attacks of insects in hot weather, often stripping him naked and smearing his body with honey, &c.

THE FIRST TELEGRAPH DISPATCH FROM AN AERIAL STATION.

Balloons are proving a very useful aid to the army. The large area of the earth's surface, which is not commanded by the eye at the high elevation to which a balloon can ascend, gives great facilities for the observation and military reconnaissance. The balloon poised over an enemy's camp, may observe his defenses, count the troops, see his movements, and know where the can be assailed with advantage. All this can be done without exposure to danger itself, and is certainly preferable to military excursions in railroad cars to find out masked batteries by having them play on you directly from the troops engaged in the reconnaissance. A remarkable and novel feature which accompanies these balloon experiments, is the new application which is made of the magnetic telegraph. The rope which holds the balloon in place, also contains a magnetic wire, through which the observer in the balloon, can continually send information of his observation to the commanding officer below, or receive any directions which may be sent to him. Professor Lowe has just been making use of his balloon for this purpose, and the first telegraph dispatch from an aerial station half a mile above the earth, was sent to the War Department by the novel telegraph.

Sketch of Gen. Beauregard.

Gen. Beauregard, chief of the staff of P. T. Beauregard, commander-in-chief of the Confederate army, was born on his father's plantation, near New Orleans. He is a descendant of the most aristocratic Southern families. His father was a wealthy and influential Louisiana planter. His mother was of the noblest family of Italy. Gen. Beauregard entered the United States Military Academy at West Point, at an early age, where he graduated in 1838, taking the second honors in a class of forty-five graduates, and was appointed to the corps of engineers. He was promoted to first Lieutenant in June, 1840, and in that capacity served with great distinction during the Mexican war. He was twice brevetted for gallant and meritorious conduct in the field, and first time as captain for the battles of Contreras and Churubusco, to date from August 20, 1847; and again as Major for the battle of Chapultepec, to date from the 13th of September of that year. He was promoted to about forty-three years of age, in the prime of life and vigorous health, erect as a soldier, well made and remarkably active. There is great spirit and determination in his look, and he evidently possesses great natural power. The most characteristic feature of the General is perfect method in all his plans. He is regarded one of the ablest officers that ever was in the American army.

Last Hours of Senator Douglas.

A news paper correspondent, speaking of the last hours of Senator Douglas, says: "The day before his death he was visited on by the Roman Catholic Bishop, whose ministrations, however, were of little avail to the dying man, who said to him: 'Sir, when I desire it, I will communicate with you freely.' And on a subsequent occasion, when the Bishop asked him if he desired the ceremony of extreme unction to be administered to him, he said: 'No, I have no objection to discuss these things now.' His dying message to his two sons was: 'Tell them to obey the laws and support the Constitution of the United States. The funeral obsequies took place in Chicago on the 7th inst., with much solemnity, according to the rites of the Roman Catholic Church, of which his widow is a member. The turnout of people was immense, and all business was suspended."

Solpifer for Potatoes.

A correspondent of the London Gardener's Chronicle dated his potato seeds with sulphur, and found that it not only drove away slugs, worms and insects, but that the crop was entirely free from the disease, while others in the adjoining row, planted without sulphur, were "seriously damaged by disease."

The State of Mississippi.

The State of Mississippi is said to have volunteers in the field eleven full regiments of volunteers, leaving seventy five organized companies of infantry, and seventeen of cavalry and artillery, anxiously waiting orders to march.

To Clean Marble.

Mix a quantity of strong soap with quick lime, to the consistency of a paste, and spread over the stone, and let it lie over night. Then rub off with a soft cloth, and polish with a dry woolen rag.

DEVINO RUBIAR.

Rhubarb dries very well, and when well prepared, will keep good for a indefinite period. The best mode that it should be broken off while they are crisp and tender, and cut into pieces about an inch in length. These pieces should then be strung on a thin twine, and hung up to dry. Rhubarb shrinks in a dry place, and more than any other plant I am acquainted with, and strongly resembles pieces of soft wood. When wanted for use, it should be soaked in water overnight, and the next day simmered over a slow fire. None of its properties appear to be lost by drying, and it is equally good a sauce in winter as that made from any other dried fruit. Very few varieties are suitable for drying, and most of them contain too much woody fibre. The best variety of rhubarb for any purpose is the Victoria, which grows in a cold, but not a very cold, soil. It is a native of the mountains of the Alps, and is a very hardy plant, and grows in all climates, and is a very useful vegetable. It is a native of the mountains of the Alps, and is a very hardy plant, and grows in all climates, and is a very useful vegetable.

WHAT IS NOT CHARITY.

It is not charity to give a penny to a street mendicant of whom nothing is known, while we haggled at a poor man out of employment for a miserable dime. It is not charity to beat down a semestress to starvation prices; to let her sit chilled in wet clothes sewing all day; to deduct from her pitiful remuneration if the storm day she promptly appears. It is not charity to take a poor relation into the family, make her a slave to all your whims, and taunt her continually with her dependent situation. It is not charity to turn a man out of work into the streets with his family, because he cannot find employment. It is not charity to extract the utmost farthing from the widow or orphan. It is not charity to give with a supercilious air and patronage as if God had made you, the rich, man different, and to despise the poor, the ignorant, or the claimant that he is poor. It is not charity to be an extortioner—no though you bestow alms by the thousand—Boston Journal.

To Free Swine from Vermin.

A writer in the "Switzer" writes: "If your hogs are troubled by vermin, rub their backs with a better, take a rough twelve foot log to the feeding place, and keep it constantly smeared with tar. No spaniel ever loved water better than a lousy hog loves tar, and he applies it himself. The more you smear the hogs with tar, the better they will be. It is not only good for the hogs, but it is also good for the farmer, as it keeps the hogs from eating the corn. It is also good for the farmer, as it keeps the hogs from eating the corn. It is also good for the farmer, as it keeps the hogs from eating the corn."

GINGER BEER.

Put two gallons of cold water into a pot upon the fire, add to it two ounces of good ginger bruised, and two pounds of white or brown sugar. Let all this come to the boil, and continue boiling for about half an hour. Strain it through a cloth, and pour into a jar or tub, and add one sliced lemon, and a half an ounce of cream of tartar. When nearly cold, put in a teaspoonful of yeast, to work. The beer is now made; and after it has stood for a day, and is quite clear, bottle it for use. Tie down the corks firmly.

BRILLIANT DESCRIPTION.

A gentleman on board a steamboat with his family, was asked by his childer what "made the boat go," when he gave them a minute description of the machinery in the following words: "You see, my dears, this thing umble goes along through the water, and is pushed on by the fire, and that connects with the crank-umcrankum, and then that man, he's engineer, you know, kind of stairs up there—that 'd' you call it with his long poker, and they all shove along, and the boat goes ahead."

CASSIUS M. CLAY'S LETTER.

We have good reason to believe that the publication by Cassius M. Clay of a letter to the subject of our foreign relations not only fails to be approved by the Administration, but is in insubordination to the law of 1856, which expressly forbids any such communication from a diplomat or consular officer.—N. Y. Tribune.

SOLPIFIER FOR POTATOES.
