THOMAS LYON, Chemist, N. Y. SARATOGA SPRING WATER, sold by all Druggists Smallness of Cob Very Desirable in Seed Coru. W. C. SAWYER & CO. FOREIGN AND DOMESTIC CANDIES, TOYS AND FANCY ARTICLES, The selection of seed corn is one of the most important things which a farmer does at this season. Coarse cobs accom-pany late maturity, as a rule; fine cobs, well tipped out, indicate perfect maturi-ty, adaptation to the season and soil, and a fixedness of character which it is im-portant to maintain. The curing of corn takes place to a great extent after husk-ing, and the presence of a great, soft, moist cob in each ear gives a tendency to mold, which should be sedulously avoid-ed. The old experiment of fitting a pa-per cone to an ear of corn, then withdraw-ing the ear, shelling it and returning the kernels to the cone, is interesting and in-structive. If the kernels will all go easi-ly into the cone, the cob is too large, and of all sizes, s.
