ten feet 'from the body. The application of manure, therefore, to give the best re-sults, should be distributed around the tree at a distance of from five to eight feet from the trunk. In positions where the turf is desired to be maintained, cut and roll it back, put on the manure, fork it in very lightly, and then replace the turf.—Horticulturist.

WHITE-WASHING.-The time for spring WHITE-WASHING. The time for spring cleaning and fixing up has come, and one of the most important items is white-washing. We often wonder why far-mers do not do more of this, when, by a day or two spent in white-washing the barns and out-houses, the fences, etc., we can make everything look so cheerful and neat. For an out-door white-wash, the following gives good satisfaction : Take a tub, put in it 2 bushel of fresh burnt lime_and pour on enough watef to slack lime, and pour on enough water to slack it. When it gets hot, stir in about a pound of tallow or grease, and mix it well.— Then add hot water enough to make it thin enough for use

of tallow or grease, and mix it well.— Then add hot water enough to make it thin enough for use. For cellars, a simple mixture of fresh lime and water is best, and should be applied one or twice a year. For house rooms, we flud nothing equal to "Paris White," found in drug stores. For every two pounds of whiting, take one ounce of the best while glue; cover this with water over night; and, in the morning, dissolve over the fire, being careful not to burn it. Mix the whiting in hot water, and while hot, add the glue, stirring it thoroughly, and adding enough hot water to make it about as thick as good cream. If you get it too thin, add a little more of the Paris White. This makes a very fine white-wash, that will not rub off. To make a light pink, add a little vermillion red. For a sky blue, a small amount of Prussian blue will give the required tint. For a straw color, use a little chrome yellow. The colors should be finely powdered, and may be used for tinting outside white-wash. Stift the wash often while using. Apply with a good white-wash, brush, with long hairs, using a thin board at the corners of papered rooms, to prevent the wash from spolling the paper. —Cor. North Western Farmer.

ROAD MAKING .- The following hints upon this subject we find worthy of consideration; and as in the Spring much time is devoted to repairing and making roads, we give them for the benefit of farmers and others:

and others: "In road-making, one great requisite is the ready and total removal of the water. There cannot be a good road where water stands by the side of it or on it. If the ditches have no ready outlet, the road bed will soak up the moisture more or less by capillary attraction, and thus remain rut-ted and muddy. It is vain to think of having a good road on asubsoil filled with stagnant water. Even on side hill, if wa-ter remains on the upper side, it will in-jure the road by passing under. Provide then, if possible, for the thorough drain age of your roads, either by surface or covered ditches. See that the road bed is evenly and elightly rounded, so that the water can readily find its way to the drains. If the soil is clayey or loamy, give it a few inches of gravel, or even coarse send, and you will have a fine and pleasant passage-way. If thesoil iseandy, it needs an addition of clay to correct it, and this will correct it so that good roads may be had over the lightest sandy soils."

MILK BUISCUIT. — Take six large white potatoes, boil them and mash them thro' a cullender, with a quart of hot milk. Stir in enough flour to make a stiff sponge, add a teaspoonful of sait, the same of sugar, and a teacup of yeast. Set it to rise three or four hours, when light take a j fbof butter, rubbed in flour, and throw on the snonze with sufficient flour to make a soft dough. Out out when light and let them sign hair an hour be fore baking. Bake twenty minutes.
