Why do young men leave the farm and the workshop to engage in counter-jumping, mixing liquors, cleaning spit toons, and lounging around stables and liquor saloons? It is because they do not know any better, cannot realize where it leads to, or because they are perverted and willfully wicked. Many farmers are to blame for not supplying their sons with useful and entertaining books—with the means of improvement books—with the means of improvement and amusement at home. They fail to and antisement at holie. They are to realize that boys are boys, and that they love variety. It is observed by young Robert Corncob that young Mr. Yard-Robert Corncob that young Mr. Yardstick dresses nicely, goes into company, and is popular with the young ladies. This gives R. C. a desire to change his rougher but much healthier pursuit and becomes a clerk. Or, failing in this, it would be a good thing he thinks in the way of promotion, to learn to smoke, drink, tell stories, and get acquainted with bar room life and bar-room lions. Strong talk—profanity and vulgarity—strong liquor, and strong tobacco go together and may be found there. He begins by holding horses, holding spittoons, and doing such mental service as his low ambition and coarse nature sug-gests or permits. He usually "fetches up" in the poor house, in the gutter, or

in the prison.
Parents cannot be too careful in impressing their sons with right ideas as to the most desirable callings in life. and to cultivate in them a love for rura life. Who is there more noble, more independent, then the intelligent farmer, who owns his homestead stocked with horses, cattle, sheep, pigs, poultry, fruit-trees, vines and shrubs? The farmer who is thritty-and well-to-do, what care she for the finetuations in the price of stocks or dry goods? He will gather his crops, lay in a store of good things for the winter, and sell the surplus, His time is his own, and his crops grow while he sleeps. The life of the farmer is or should be the first choice of many of our young men. Next to this importance to the commonwealth is the mechanic and manufacturer. After the farmer or rather in juxtaposition with him, comes the mechanic, the inventor. He makes the labor-saving ma-chinery. By his contrivance we transport our productions and ourselves across continents and seas by means of the steam engines. It it the ongineer —not the politican—who is prominent -not the politican—who is prominent in building up a nation and making it a power. Then let us encourage oursons to become inventors, engineers, machinists, architects, builders, manufacturers, rather than to fritter away their precious lives in doing nothing, becoming nobedies, and in making life a failure. "Work, work, more work," is what is wanted to give health, weath is what is wanted to give health, wealth and power for good in the world.

IMPROVEMENTS IN FARMERS' HOMES.
There has been a very great change for the better in the homes of all classes of our people within the last thirty years. We-think quite a large share of this improvement is found in the strictly rural districts, and is fairly the results of the opportunities, and apply will goes of agriculture of the convertinities and avisite or a grid of the convertinities and avisite or a grid opportunities and privileges of agri-cultural life. The average rural parish is the equal of the city parish in inteli-gence, in good morals, and piety. So-cial life has not so much show and brilliancy, but quite as much solid happiness. The children coming up in the country have a much better chance of sound health, of a good education, and of a useful career in life. The division of labor, brought about by the introduction of manufacturers, has blest the fartion of manufacturers, has blest the farmer almost as much as my other class.
He no longer provides his own clothlng or makes his own furniture. He
can buy cheaper. The thrifty farmer
in the older States has an architect to
build his house, and there is taste displayed in the building and in its surroundings. He knows a good deal
about fruits and flowers, and what he
does not know his wife or daughter does does not know his wife or daughter does. The flower border is quite up to the town standard. The upholstery may town standard. The upholstery may not be quite so attractive, but the floors are carpeted, and the windows have blinds and curtains quite enough for cheerfulness and health. The table is neatly spread, and the chinaware and other appointments come from the same manufactories that furnish city homes. The cookery, especially that part of it. The cookery, especially that part of it furnished by the mistress of the mansion, is above the average in cities.

Pianos and melodeons are very common, and the same songs are heard there as in the town, and they are sung about as well. Professional singers do not go to the country for their audiences, not go to the country for their andiences, but the country comes to them and furnishes a fair share of their appreciative listners and admirers. There is leisure time in the country, time for reading and reflection, plenty of newspapers and magazines, and the village library has its numerous patrons in farmers' homes.—Parm five in this age of railroads and steamers is quite different form the life led by our fathers. It moves in the right direction—Ameri-It moves in the right direction -- Ameri-

Use of Lime in Agriculture.—The action of lime is two-fold; first physical, and second, chemical. As a mechanical agent it opens stiff chys, rendering them friable, mellow, and more easily worked; chemically, it acts upon the vegetable matter of the soil and sets free those stores of valuable substances which, without the action of this agent, must have remained inertand useless. It also enters directly inand useless. It also enters directly into the composition of plants, and in many varieties forms a large proportion of the weight of their inorgantic constituents. It neutralizes certain acids which are often present in soils, rendering them useful to vegetation instead of being positively injurious, which they are in their original state. The existence of water in the soil, however, affects the action of limo very considerably. If the land is wet and undrained, lime will not exert the same influence which it would do in the case and useless. It also enters directly inundrained, lime will not exert the same influence which it would do in the case of thoroughly drained land. A greater quantity of limo is necessary to produce a given effect, and thus the neglect of thorough drainage entails a considerable greater expenditure in liming, than would have been necessary, if the land was either naturally or artificially dry.—Cameron's Chemistry of Agriculture.

Nourishing Freth Tries.—Horti, culturists in Switzerland and Germany make a practice of baring into the ground among the roots of fruit trees with an instrument, made for the purpose, and pouring in liquid manure, to stimulate the growth and productiveness of trees, and also to enable them to resist the drought. A crow-bar driven among the roots will make a hole large enough to receive and distribute severenough to receive and distribute several gallons of liquid manure.

To shoe a hoof bound horse it is necessary to shoe him with a plain strong shoe; have the shoe to lie on the center of the heel of the foot; have your shoe bevelled on the outside of the heel, from the fast nail back, so that when he treads upon the shoe the pressure of the horse's weight well spread the heel of the foot. Use the hoof ointment up on the heel on the heel.

CURE FOR SWEENY.—Here is a cure for sweeny that I have never seen pull-lished, and It has never failed where I have known it tried:-Wormwood 2 oz; organic oil, 2 oz; alcohol, 2 pint; turpintine,1 gill; the white of three eggs. Pour in the mixture while beating the eggs. Apply with the hand once every day.—Cor. Country Gent'

We see stated that as much as 300 bushels of Norway oats has been raised to the acre, or at that rate. This is so entirely beyond anything known or heard of, as to be almost incredible.

For restoring Gray Hair to a natural Vitality and Color.

A dressing which is at once agreeable. healthy, and effectual for preserving the hair. Faded or gray hair is soon restored to its original color with the gloss and freshness of youth Thin hair is thick-

ened, falling hair checked, and baldhess often, though not always, cured by its use. Nothing can restore the hair where the follicles are destroyed, or the glands atrophied and decayed. But such as remain can be saved for usefulness by this application. Instead of fouling the hair with a pasty sedint, it will keep it clean and vigorous. occasional use will prevent the hai em turning gray or falling off, and the equently prevent baldness. Free ake some preparations dangerous and parious to the hair, the Vigor can

rely for a HAIR DRESSING, othing else can be found to desirable. 'ontaining neither oil nor dye, it does not soil white cambric, and yet lasts long on the hair, giving it a rich glossy lustre and a grateful perfume.

ly benefit but not harm it. If wanted

S. HALL, Homoopathie Physicians and Stational Electritions. Office and residence No. 37 South Honover street, Carlisle Pa. All acuto and chronic diseases sexilifully treated. Special attention will be given to the cure of all chronic diseases as Scrofilia, Cancer, Bronchitis, Epitiensy, Dyspepsia, Tetter, Liver Compilaints, St. Vitus Dance, Goltre, Paralysis, Nouralgia and General Debility.

Ladies suffering from Prolapsus Uterl, Leucorheca, Amenorrheca, Dysmenorrheca, Norvous Affections, and any form of Uterine Compilaints can be speedily cured. The above diseases have their origin in loss of the vital power of the body, brought on by interious excesses, sedentary, brought on by interious excesses, sedentary males suffering from any chronic affection, are especially invited to call and examine Drs. Hall's superior method of treating diseases.

Health we consider to be an equilibrium of the electric condition of the human system, and the more perfect the equilibrium, the more perfect the health, Disease, on the contrary, is either a plus or minus of the whole, or a portion—making one part plus and the other minus, and thereby causing obstruction and stagnation of the vital fail. Electricity is the natural element of the Norvous System, the connecting flink between mind and matter and the mode state decision of the vital fail. Electricity is the natural element of the Norvous System, the connecting flink between mind and matter and the mode state decision of the vital field. Electricity is the natural element of the Norvous System, the connecting flink between mind and matter and the mode state decision of the vital field. Electricity is the natural flenk between the decomposition and recomposition—and always cooperates with vitality in Imparting health and strength to the human system. If Electricity is the generating agent of animal life, how important then it must be in the continuance of that life, as also in the preservation of health. We would here state, for the benefit of the system—the decomposition and
