## SUMNER ON BLAINE.

A Scathing Document. WASHINGTON, Aug. 5.-Senator Sun

WASHINGTON, Aug. 5.-Dear Sir :-have seen the letter addressed to me by you through the public prints, and I notice especially that, while animadverting authority overspreading, penetrating, upon my support of Horace Greeley, you permeating everywhere. Therefore in say not a word in vindication of that publicanism, which you would install greatly concerned about the company I manity.

leave to say that in joining the Republicans who brought forward an original abolitionist, I find myself with so many others devoted to the cause I have served always that I had not missed you until you hastened to report your absence; nor had I taken account of the "Southern secessionists," who, as you ayer, are now co-operating with me in support of this

original abolitionist, except to rejoice that if among former associates some, like yourself, hesitate, their places are supplied from an unexpected quarter. You entirely misunderstood me when you introduce an incident of the past, and build it on an argument why I should not support Horace Greeley. What has President Brooks to do with the Presidential election? Never while a sufferer did anybody hear me speak of him in unkindness, and now, after a lapse of more than half a generation, I will not unite with you in dragging user from the grave where he sleens to aggravate the passions of a political conflict and arrest the longing for concord. And here is the essential difference between you and me at this junct-

> A MIDDLE SIZED BOY'S COMPOSITION on GIRLS .- Girls are the most accountable things in the world-except women. Like the wicked fles, when you have them they ain't there. I can cipher clear to improper fractions, and the teacher says I do first rate; but I can't cipher out a proper or improper, and you can't either. The only rule in arith-metic that hits their case is the double rule of two. They are as full of Old Nick as their skin can hold, and they would die if they couldn't torment somebody. When they try to be mean they are as mean as pussely, though they ain't as they let on, except sometimes, and then they are a good deal meaner. The only way to get along with a girl when she comes at you with her nonsense, is to give her tit for tat, and that will flummux her ; and when you get a girl flummuxed she is as nice as a pin. A girl can sow more wild oats in a day than a boy can sow in a year, but girls get their wild oats sowed after awhile, which bows never do, and then they settle down as calm and placid as a mud puddle. But I like girls first rate, and I guess the boys all do. I don't care nany tricks they play on me—and they don't care either. The hoitytolest girls in the world can't always boil over like a glass of soda. By and by they will get nto the traces with somebody they like and pull as steady as any old stage horse. That is the beauty of them. So let them wave, I say; they will pay for it some day, sewing on buttons and trying to make a decent man of the feller they have spliced on to, and ten chances to one if they don't get the worst of it.

> WONDERS .- This world of ours is filled with wonders. The microscope reveals them not less than the telescope, each at either extreme of creation. In the insect creation particularly there is so much to know that has never been known of; wheels within wheels, without computation or number. Let us take a rapid glance at the proofs of this statement. The polypus it is said, like the fature hydra, receives new life from the knife. which is lifted to destroy it. The fly spider lays an egg as large as itself. There are four thousand and forty-one muscles in the caterpillar. Hooke discovered fourteen thousand mirrors in the eye of a drone, and to effect the respiration of a carp, thirteen thousand three hundred arterles, vessels, veins, bones, etc., are necessary. The body of every spider contains four little masses pierced with a multitude of imperceptible holes, each hole permitting the passage of a single thread with which the spider spins his web; so that what we call a spiders' thread consists of four thousand inited. Lenwhenock, by means of microscopes, observed spiders no bigger than a grain of sand, and which spun threads so fine that it took four thousand of them to equal in magnitude a single hair.
