These Speciacles are manufactured from MINUTE CRYSTAL PERBLES melted togother, and are called DIAMOND on account of their hardness and brilliancy.

It is well known that spectacles cut from Brazilian or feotch pebbles are very injurious to the eye, because of their polarizing light. Having been tested with the polariscope, the diamond lenses have been found to admit lifteen per cent, less heade rays than any other pebble.

They are ground with great scientific accuracy, are free from chromatic aberrations, and produce a brightness and distinctness of vision not before attained in spectacles, F. C. KRAMER, CARLISER, PA.
