A NEW-INVENTION .--- We were shown a few days ago a new patent for bending tire iron, punching apperatus, &c. To a blacksmith who has any great amount of tire bending to do, this new improvement is invaluable. It was invented by Mr. James M. Bryan, of Penningtonville, Chester county, Pa., and was used by him at his shops for some nine years. There are now many of them in use in this county and in Chester county. Mr. Bryan is a blacksmith and a thorough practical mechanic-hence this great invention.

our citizens are universally known-to

The objects of the machine are to bend either light or heavy iron when cold, to bend it to any given diameter or radius, and to punch cold iron, the machine being operated wholly by hand. It is a common adaptation of the lever so arranged in its parts as to yield great power. One man of ordinary weight can bend, with this machine, tires four inches by one inch, or three by one and a half inches, when cold. In punching, dies and punches of any form may be used, the die fitting in a hole under the plunger, and the punch in a hole in the plunger, and held by a set screw.

Every blacksmith should have one of these machines-they will bend cold iron, light or heavy, and can be set quickly, with exactness to any desired diameter or radius.

Punches and dies of any shape or size. Cultivator teeth, &c., &c., may also be set with, using dies of the desired form. Shears for cutting cold iron can also be applied after the same manner.

It is a common adaptation of the lever, se arranged in its parts as to yield immense power. It is quickly changed from bending to punching, and vice versa. It is strong and durable, and not liable to get out of order.
