were repulsed by the federal army under Gen. Sherman, with considerable loss.

ment with a Rebel Battery—Jur Gunboats Driven off and sunk. NASHVILE, November 5

Yesterday at daylight the gunboat Undine, No, 55, captured a few days ago by the rebels, came through the chute at Reynoldsburk island and landed relel troops, who then fired her and left.

Two flat-boats were also used.

No fighting has taken place to-day. The rebels are engaged to burying their dead. Gunboats from Paduch are in sight, and reinforcements have arrived. General Schofield takes command of the post of Johnsonville.

and subsisting on the country.

The Whereabouts of Forrest.

NASHVILLE, November, 5. Three reginents of cavalry are reported with a cavalry force, is reported near Johnsonville, which is simply garrisoned to repel any attack.

Capture of the Gunbgat Undine.

CATRO, Nov. 5. her as a gunboat. The rebels at Fort Her, that the plantiff's vote was not refused man are reported twelve thousand strong, with sixteen pieces of artillery. The was of African descent. The defendents transports Venus and Chaseman were captured the same day as the Undine. The pilot of the former reports that she was printed by shell and musketry. Captain mon, "there are three kinds of pride - England" in the stolid, brute-like countering in the stolid in the

the rebels had not destroyed her. The rebels have three batteries within a mile above and below Fort Herman. Thirteen or fourteen of the crew of the Undine are reported to have been killed after the

Rebel News from Hood's Army. [From the Richmond Examiner.]

A friend who left Jack sonville, Ala., onthe 27th ultimo, gives us some interesting information of Hood's army, and of recent operations in North Georgia. Hond's army laid encamped at Jacksonville, Alabame, for ten days. While there the men were under the most admirable discipline; not a depredation was committed. The citiizens appreciated this good conduct and opened their homes to the men, showing them every kindness and hospiour country, its institutions, and its gov- tality in their power. On the 22d ulterrment, are to remain for our protection the army broke camp at Jacksonville and

Curious Calculations. -The Scientific American says the simple

interest of one cent, at six per cent. per annum from the commencement of the Christian era to the close of the present year 1863, would be but the trifling sum of eleven dollars, seventeen ceats and eight eight; but if the same principal, at the same rate and time, had been allowed to accumulate at compound interest, it would require the enormous sum of \$84,840,000,-000 of globes of solid gold, each equal to the earth in magnitude, to pay the interest; and if the sum were equally divided among the inhabitants of the earth, now estimated to be one thousand millions, every man, woman and child would receive 84.840 golden wolds for an inhe itance .-Were all these globes placed side by side in a direct line, it would take lightning itself, that can girdle the earth in the wink of an eye, 73,000 years to travel from end to end. And if a Parrott gun were discharged at one extremity while a man was stationed at the other-light travelling 192,000 miles in a second; the initial velocity of a cannon ball being about 1500 per second, and in this case supposed to continue at the same rate; and sound moving through the atmosphere 1.120 feet in a second-he would see the flash after waiting 110,000 years; the ball would reach him in seventy-four billions of years; but he would not hear the report till the end of a thousand millions of centuries. -Again, if all the masses of gold were fused into one prodigiou: ball, having the sun for its centre, it would reach out into space, in all directions, one thousand seven hundred and thirty millions of miles, almost reaching the orbit of Herschel or Uranus; and, if the interest were confinued till the end of the present century, it would entirely fill up the solar system, and even encroach five hundred millions of miles on the domain of the void beyond the planet Neptune, whose orbit, at the distance of two thousand eight hundred and fifty millions of miles from the sun, encircles our whole system of worlds.
