## REPUBLICAN.

GEO. B. GOODLANDER, Proprietor.

PRINCIPLES—not MEN.

TERMS—\$2 per annum, in Advance.

VOL. 38—WHOLE NO. 2000.

CLEARFIELD, PA., THURSDAY, JAN. 3, 1867.

NEW SERIES—VOL. 7, NO. 21.

## The Source of Crime—Our Duty as Philanthropists and Christians.

"Vice is a monster of such frightful main,

That to be hated need but to be seen;

Yet seen to oft, familiar with her face,

We first loathe, then pity, then curse."

The initiatory steps in any line of sinful indulgence are warmly contested by the moral influences that hover around, despite the most energetic efforts to throw them beyond our natural bent. We may hate even the thoughts that first form the groundwork which culminates in overt acts of wickedness, knowing to a demonstration that a future in which they operate is beset by thorns, ending in loss of reputation, temporal comforts, and life itself. We may loathe the object of pursuit, denouncing the impulse that drives us forward; yet, there is a charm, an unnatural agency which takes the will captive, makes us plant slaves, submitting our minds and bodies to acts of humiliation and shame.

We are living in an age of excesses and wickedness. Crime is fearfully on the increase. The city and country prints are filled with narrations of murders, rapine and theft, with their collateral train of evil surroundings.

All classes of society are represented in the roll of tragedy and crime, where in is recorded "man's inhumanity to man."

We find the Rovs. Kinslys and Hudsons, reputed ambassadors of Christ, figuring with the Probsts and Springs, whose lives were spent in crime from earliest infancy, the petted Ketem and the sneak river thief, side by side in the list of criminals.

These are the cropping sows during the "civil" struggle. The list of killed and wounded, by bullet, shell and sword, by exposure, fever and starvation, may present a more fearful bulk of mortality, furnish the homes of thousands with dark mantles, obstructing the rays of hope as it once gleamed on all around. Such sorrows are smothered by the march of time, often leaving the heart purer and better qualified, afterwards, for subsequent conflicts. This second crop, however, is more blighting in its effects, more fearful in its developments, and more, far more detrimental in its germinating resources. The widow wife, the fatherless child and doting parent, find some consolation in the thought that their loved ones yielded life as an offering in defense of home and country; but no consolation survives the wreck dashed upon the highway and lost beneath the avenging sword of justice. The wife, child or parent see no "silver lining" in the dark, portentious cloud that engulfs them, no rain-bow of promise, assuring that all is well beyond the dividing line.

The returned soldier, a complete wreck, a mere remnant of his former self, although an object of commiseration, is honored by the true patriot while the moral wreck, which goes down in the storm of life's rugged waters, is remembered only as a reproach upon the name of humanity.

This is indeed an age controlled by wicked passions, the powers of evil have even marshaled their hosts within the visible church, using its influence to prolong strife and social feuds.

The God of peace, of brotherly love, of christian charity and forbearance, has been compelled to abdicate the Throne, while the God of war, of hate and selfishness, has reared his seat prepared at the word of the people, to keep alive the elements of discord, disunion and oppression. These bitter fruits legitimate offshoots from the field of carnage, flourish after the smoke of battle, after the war has ceased, after the articles of capitulation are signed and sealed, with double vigor. We are just beginning to reap the bitter fruits of national sin. The North and South alike share in this harvest. There is no escape from the direful curse only in the resources of that portion of our people who profess to mould their actions upon christian principles—who profess to be guided by moral checks and wholesome laws, founded upon principles of equity and justice. The home influence must be a christian influence, including a sentiment of love, of expanded philanthropy, of forgiveness, or we suffer by schism, jealousies feelings of alienation, calculated to undermine society in all her departments. Let us as individuals, as integral parts of this republic use our efforts to create a wholesome state of society, and the world will commence.

Our country must recognize the great principles that are taught in the scriptures, making them a controlling power in the land, or we never will be exalted as a nation. Passion will never elevate us, will never give us a permanent influence, will never make us one in every good word and work.

Let the leaven of christian charity, brotherly love and national unity dwell among our professed christian people and it will not be long before our will come to its bone and we will rise up from the valley of death and carnage a great army. There is no need of dividing lines, no need of protracting feuds, if the moral elements, North and South, unite their recuperative powers.—*Lycoming Gazette.*

A German forest keeper, eighty-two years old, not wishing to carry to the grave with him an important secret, has published in the Leipzig Journal a recipe he has used for fifty years, and which, he says, has saved several men and a great number of animals from a horrible death by hydrophobia. The bite must be bathed as soon as possible with warm vinegar and water, and when this has dried, a few drops of mercuric acid poured upon the wound will destroy the poison of the saliva and relieve the patient from all present or future danger.
