THE REPUBLICAN. WEDNESDAY MORNING, MARCH 19, 1873. IT NEVER PAYS. It never pays to fret and growl. When fortune seems our foe, The better deal will push ahead.

THE theory that a given quantity or weight of brains is necessary for the exercise of the mental faculties, therefore all men are provided with an equal quantity, has been lately exploded.

CURIOSITIES OF HUMAN LIFE. Care has been taken to make the following statements accurate, the best authorities having been consulted in their preparation.

LENGTH OF HUMAN LIFE. The average length of life is 72 years. One-fourth to die before the age of 25. One-half before the age of 50.

POPULATION. An able professor of the University of Berlin has lately made the following estimate of the population of the globe.

DEATHS. The number of deaths per annum as founded on statistics for 1871 is 32,850,000. The number of deaths per day is 90,000.

BIRTHS. The number of births per day is 106,000. The number of births per hour is 4,450.

OF THE SEXES. There are more males than females born by 1 per cent. At the age of 20 there are more females than males.

OF SUICIDES. Three-fourths of all suicides are males. The greatest number are caused by divorcees.

OF WEIGHT. The average weight at birth is 6 1/2 pounds—the weight of males a little exceeding that of females.

That of females, 20 times. The average weight of all people is 100 pounds. Probably the largest and heaviest single family in the world is the Howland family, of Kentucky; and, possibly, there has never at any time existed a parallel to it.

Computed strength of father and sons, 6,500 pounds. Entire ages, 557 years. Many of the grandchildren of this family are 6 1/2 feet in height, and weigh over 200 pounds.

It seems we are now to have in the agricultural bureau a microscopist! In fact it is a part of our new bureaucratic system.

Dr. Mott gives the following daily proportion of food as requisite to sustain life healthfully and scantily. 1st Class—Persons of moderate health and little exercise.

Now, I always supposed that entomology did refer to bugs. [Laughter.] The Commissioner gives the various modes of fusing these bugs out.

Let there be annotations go out with these reports, Mr. Chairman. I would not be so particular in this remarkable nomenclature had we not been advised to-day by the honorable gentleman [Mr. Garfield] that it was the duty of the Federal Government.

Every moment during life a portion of our substance becomes dead, combines with some of the inhaled oxygen, and is thus removed. By this process it is believed that the whole body renews itself every seven years.

News.—General Grant said in his inaugural address on Tuesday, alluding to the cares and responsibilities of public life: "I have had scarcely a respite since the eventful firing on Fort Sumpter to the present day."

It is called "embracery," which is as pretty and soft a title for bribery and corruption as anybody could desire.

Hon. S. S. Cox's Speech on the Agricultural Report of 1872. We put aside this work of agricultural wonder for the purpose of reviewing it, as our wont is, when we came upon a few remarks made on the floor of the House by the Hon. S. S. Cox, the Mercurio of Congress.

It is very evident when we send these out we ought to send out at the same time an interpretation of them for the benefit of the common people.

It seems we are now to have in the agricultural bureau a microscopist! In fact it is a part of our new bureaucratic system.

Dr. Mott gives the following daily proportion of food as requisite to sustain life healthfully and scantily. 1st Class—Persons of moderate health and little exercise.

News.—General Grant said in his inaugural address on Tuesday, alluding to the cares and responsibilities of public life: "I have had scarcely a respite since the eventful firing on Fort Sumpter to the present day."

It is called "embracery," which is as pretty and soft a title for bribery and corruption as anybody could desire.

Its work. We have here on one page—as you see—what seems a hydraulic ram; and then on another, in magnificent wood and type, the picture and description of the merino ram 'Dictator.' (See page 187.)

It is very evident when we send these out we ought to send out at the same time an interpretation of them for the benefit of the common people.

It seems we are now to have in the agricultural bureau a microscopist! In fact it is a part of our new bureaucratic system.

It is called "embracery," which is as pretty and soft a title for bribery and corruption as anybody could desire.

Bridges. The Chinese lay claim to having been the first bridge builders, and as the word bridge does not occur in the Bible, we are led to believe that the Ancient Jews and Egyptians were unacquainted with this method of crossing streams to any considerable extent.

It is very evident when we send these out we ought to send out at the same time an interpretation of them for the benefit of the common people.

It seems we are now to have in the agricultural bureau a microscopist! In fact it is a part of our new bureaucratic system.

It is called "embracery," which is as pretty and soft a title for bribery and corruption as anybody could desire.

comparison with which the efforts of ancient skill are entirely dwarfed.—One of the most celebrated bridges of our time is the Britannia Bridge, 1,100 feet long, reaching over Menai Strait, and connecting Carnarvon with Anglesea. It is a tubular structure, resting on piers. An island of solid rock stands midway of the Strait, and upon this firm foundation the ends of the tubes rest.

It is very evident when we send these out we ought to send out at the same time an interpretation of them for the benefit of the common people.

It seems we are now to have in the agricultural bureau a microscopist! In fact it is a part of our new bureaucratic system.

It is called "embracery," which is as pretty and soft a title for bribery and corruption as anybody could desire.

Don't fret. What good does it do? Certainly you are none the happier—nor your friends—because you constantly air your troubles. Fretting is useless and unnecessary.

It is very evident when we send these out we ought to send out at the same time an interpretation of them for the benefit of the common people.

It seems we are now to have in the agricultural bureau a microscopist! In fact it is a part of our new bureaucratic system.
