roofs on most liberal terms, and at the shortest notice. We respectfully call the attention of persons a-bout to build, to our invaluable method of roofing, now much used throughout the principal cities of the United States and their vicinities. This mode of roofing having all the combined requisities of cheapness, Durability, and Security against Fire and Water, and dispensing with high gable walls; the roofs require an inclination of not use than three-quarters (2) of an inch to the foot, and in many cases saving the entire cost of rafters—the ceiling joist being used. The guitters are made of the same material, without any extra charges; consequently, our roofs are put up at almost half the cost of either Tin, Slate, or Shingles. The material being of an imperishable nature, it surpasses all others in Durability; -besides, in case of any casuality, it is the most easily repaired of any other roof now in use. Yet, the best proof we can offer as to its being both fire and water proof, are our many re-

being both fire and water proof, are our many re-ferences, to any one of whom we are at liberty

to refer. N. B.-But let it be distinctly understood, (since we manufacture our own composition, and de the work in person,) that we warrant all our work proof against both Fire and Water; if they prove contrary, we will most willingly abide the results.

The materials being mostly non-conductors of heat, no roof is so cool in summer, or so warm in winter. Those wishing to use our roof should give the rafters a pitch of about one inch to the foot [msy 27, 1854.-4m.] [may 27, 1854.--4m.
