and Lungs, by MEDICATED INHALATION. The great point in the treatment of all human mala-dies is to get at the disease in a direct manner. All med-icides are estimated by their action upon the organ re-quiring relief. This is the important fact upon which Inhalation is based. If the Stomach is diseased, we take medicine directly into the Stomach. If the Lungs are diseased, breathe or inhale medicated vapors directly in-to fhem. The reason why Consumption and Diseases of the Lungs have heretofore resisted all treatment has been because they were not approached in a direct manner by medicines. They were intended to be local, and yet they were so administered that they could not act constitu-tionally, exponding their immediate action upon the Stomach, whilet the food ulcers within the Lungs were unmolested. INILALATION brings the modicine into direct contact with the discusse, without the disadvantag-des of violent action. Its application is so simple thai it may be employed by the youngest infant or feel-feet in-valid. It does not derange the Stomach, or interfere in the least with the strength, confort or business of the patient. ** No charge for consultation.
