Yours, Respectfully,

As we said last week, there is no probability of any activity in the anthracite coal trade before the first of April next. One purpose of the parties to the coal combination is to reduce the surplus stock of coal on the market, to allow of a full and continued supply of coal fresh mined to the end of the sea, or. To this could be sevent coal regions when on. To this end the several coal region are crying how little they can do in the way of production, and tornage all around is no crly at a standstill. Of the little report-ed last week by the Reading Railread Contpany nearly or quite all was anthracite from the Lebigli and Wyoming coal regions and bitumi gous coal from west of Harrisburg. Not a ten was sent to Port Richmond dur-ing the week, but the shipments of old stock nce reached 23,500 tons and was princi sally carried by the company's steam col-iers. On the 27th inst., shipments of coal from, the mines will be commenced in mode-ate amounts in the Schuylkill region. The ck of coal on hand, however, will be sely watched, and the supply not be al-ved to run ahead of the current demand. Ulthough last week was what is known in officing that week was what is known in the trails as a working week by the Lehigh alley Rail; oad, very little coal was brought after at An. boy, and of the amount reaching that point a considerable portion of a considerable portion of the creams in the ears for want of shipping It is so much more satisfacto into addrectly into vessels than to dump the coal and load from the wharves that the oaded cars are permitted to stand upon the loaded cars are permitted to stand upon the tracks and sidings. The Lehigh Navigation Company stopped work at all their collieries but one hast week, and except at that one work will be suspended for the remainder of the month. The only encouraging feature of the trade at this, the gloomist part of the year's business, is the strengthened assurance that the conditions of the combination will be adhered to. This is the season of the year when the coal trade is dullest and the particular time when each income is smallparticular time when each income is small-est. It is true the expenditures are corres-pondingly lessened, but it universally results in more or less of financial inconvenience, and the present is no exception to the rule, though there is no reason to doubt that all the parties in interest will pass safely through to the time for active business. The report made current last week, on the strength of a newspaper paragraph that the Reasing Haffread Company had borrowed in Lendon a million of deliars at 96 cents on the dollar, is incurrect, no such lean having cen made, all the temporary loans required by the company having been secured at 6 per cent from capitalists in our own market.

Death in His Favorite Robe.

The mortuary statistics of the whole civil-ized world show that about one-fifth of all mankind die of consumption alone, and the number of deaths due to consumption bears a greater ratio to the whole number than that of any office three diseases together. Moreover, investigation proves that this ratio is steadily increasing. Its increasing previlence has led to the popular belief that consumption is incirable. Every year hundreds of these sufferors sock, in the sunny retreats of Florida or the dry atmesphere of Colorado; for health—and find only a grave. The influence of the atmosphere—the only remedial agent that either Fifrida or Colorado can afford the consumptive—is at best only pallintine. The cure of consumption depends upon two essential condition; 1st the arrest of the abnormal breaking down of the dissues, which prevents emaciation, and 2d. the restoration of healthy nutrition; in order to stop the formation of tuberculous matter. Fulfill these mankind die of consumption alone, and the mation of tuberculous matter. Fulfill those conditions, and consumption is as curable as fever. To fulfill these conditions the reas fever. To fulfill these conditions the required remedy must increase the appetite, favor the assimilation of food, and enrich the blood, thus returding the development of uthercles. To accomplish this, a more powerful alterative than Dr. Pierce's Golden Medical Discovery hus fever been discovered. At the same time, it suches the irritation of the nervous system produced by violent coughing, which in its turn so offen leads to more serious results. The use of "expectorants" in consumption is absolutely suicidal. For white removing the tubercles already formed, they produce yet more serisuicidal. For while removing the tubercles already formed, they produce yet more serious results by influtning and destroying the sound and healthy tiseffes. Consumption requires a remedy that will soothe while it relieves; harsh rigidicines, but add their to the flame that slready threatens to consume the system. The Golden Medical Discovery (utifills these conditions, and has been pronounced the best remedy yet discovered to allay and arrest consumption

A TOUCHING DEATH-BED SCHOOL.

"Oh, if I had only received it before, I am confident it would have cared me." These im-pressive words were speken by a gentleman in the last stages of communities, who, on his death-hey, had received a bettle of Hale's Rowey of Horebonad and Tar, and heat taken only a part of it, when he found he could breethe with almost perfect case; his cough had left him, but, not having commenced the article in time, his constitution was broken, and he had not sufficient -trength left to overcome the disease. Therefore the public will see the necessity of keeping this article in the house, ready for immediate use, as it is a cerfain cure for all coughs, colds, hoarseness, difficult breathing, and all affections of the threat, t ronchial tubes and lungs, leading to consumption. Sold by all druggets, and at Crittenden's Central Medicine Warehouse, f Sixth avenue, New York City, at 50 cents and \$1. Great saying by purchasing large size.
