

FARMERS' COLUMN.

How to Train a Colt to Harness.

Put on him an easy collar, having a pair of reins attached, and tie two pieces to lengthen the traces and let a strong man walk behind holding them. After a few minutes the leader may order the man to pull the traces very gently, as to press the collar but slightly at first. In a little time he may pull lighter, and the leader keep his eye on the colt, and if he shows any signs of flinching let him enter the traces to be slackened, and then gradually draw again until the colt is seen to lean into his collar, when his whole form holds the traces may use the man force, for a short time only. The traces must now be slackened again, and the same course gone over repeatedly, but stopping the colt occasionally to gentle him, taking care, however, to slack the traces just as he stops and turn a little to one side when starting each time, while the man pulls the opposite trace.

A Woman Under Water.

"Don't go out on that log!" screamed the masculine attendant as one of the damsels walked out on the careening limb of an old dead tree, which lay diagonally with the bank. "Why?" she said, looking on. "It will turn with you!" shouted the gentleman, warningly. "How can it?" and the line with a long sweep of the pole descended into the water. Just then there was a slight oscillation of the log, two dainty feet stepped from under a cloud of skirts, a sly-like form, bent gracefully to the treacherous flood, and, with stifled scream, body and feet disappeared from view. But for a moment only. The next instant, like the twin extremities of a pair of scissors, two symmetrically modeled female contortions appeared above the surface, bobbed about for a second, and then sank again. By this time the gentleman was in the water, and by good fortune contrived to get hold of one of the girl's feet, and was tugging away manfully in the direction of the bank. But the unfortunate lady appeared to be turned wrong side out, and dragged heavily like an inverted umbrella. But a landing was made at last, and the young lady, like a capsize sailing vessel, was put right side up with care. As soon, however, as she had regained her usual balance, she turned furiously upon her rescuer.

Feeding for Milk.

D. G. Roberts, manager of Hon. Thomas Allen's farm at Pittsfield, believes in semi-feeding for cows. The Berkshire County Eagle thus summarizes the paper read by him at the recent farmers' institute in that town: Cows should be turned out early and have access to the entire pasture they are to enjoy through the season. Early pasture should be supplemented with feed. Orchard grass and clover sown together on good well-tilled soil at the rate of 2 bushels of the former and fifteen pounds of the latter to an acre should be mowed for them as a partial sowing, to be followed by oats, barley and peas, and this in turn by felder corn. Orchard grass and clover for winter feed is the best. He gave the record of what was cut in 1877-8 from a six-acre lot after being cultivated in the ordinary way for two years. It had been seeded with barley in 1875 and in October cut out ten tons to the acre. The two crops of 1877, cut June 10 and 11 and August 10 and 11, stood in the field 5 days and together weighed at the barn 254 tons. In 1878 the crops weighed 27 tons. Each fall there was a fine aftermath. In the spring of '78 ten acres were thus seeded, half with spring wheat and half with barley, and in October 10 tons of orchard grass and clover were put into the barn. Winter experiments with the seeds in feeding, compared with timothy and red clover, showed that 20 cows gave 200 pounds against 227 on an 8-day experiment. As to roots, the best and turnip received high praise. Cabbages, and after milking were well spoken of. Under his winter treatment 19.88 pounds milk made 1 pound of butter, and in June it required from pasture 22.11, and as his cows mostly came in in the fall the experiment may be judged in the light of the fact that the new milk cow does not give milk as rich as that which yields 5 months after. He argued that milk was as profitable in winter as in summer, notwithstanding many argue it costs so much to get it. Mr. Roberts feeds regularly at 445, hay at 620 the cows are milked and fed on roots with grain. At 10 they are turned out to water and exercise. At 2 p. m. they return to their stables and are cleaned. The second feeding begins at 4 p. m. similar to that of the morning, including milking after eating hay.

Farmers, Don't!

Don't listen to or have anything to do with lightning-rod peddlers. Don't sign any papers under the delusion that you are making a fair contract with a stranger who has some patent device, the rights of which he proposes to sell you for the county or state. Don't give your note in payment for anything to strangers. Don't mortgage your farm. Don't go in debt hoping to pay at a more convenient season. Don't buy what you can do without by pinching a little. Don't invest in costly agricultural implements under the stimulus of accomplishing as much work in one day as you can in three or four with less costly implements, when you have plenty of time to get through the work on hand with cheaper tools. In one case you have the time and money to; in the other you spend the money and waste the time. Don't attempt to improve your stock by using half-blood males. Don't attempt to cultivate more land than you can do thoroughly. Don't let your work push you, but always push it. Don't plant in the moon, but put your ground in the best order and plant when the season seems most favorable. Attend to the most grossly neglected parts of your farm, and get the best of the season. For the CARBON ADVOCATE read it at home with your family, and it will prove the best investment on the farm.

PROGRAMME FOR THE 4TH.

A communication from a leading citizen at the last meeting made known to the plans of the Lane Kilo Club for the coming season. It was desired to know if the club would take a place in the procession, and whether any member could be induced to deliver an oration, if more than one oration was necessary to insure a whooping time.
