Mr. Henry G. Vennor, a meteorologist of Montreal, whose weather phrophesics have heretofore been pretty generally verified, makes some direful predictions of storms, cold, etc., for June and July. In a late letend of May and first of June, will be felllike with frosts. July will be a terrible month for storms, with terms of intense heat, but another fall-like relapse, with frosts, will in all likelihood occur a few days before the 20th. I fear the storms of thunder and builwill be of unusual severity during July. I must claim the verification of my prediction relative to a cold wave with frosts, over a large portion of the the United States, between the 10th and 15th of May. The re lapse toward the close of the present month will be more severe than that just past,

The advance in the price of paper which presses hardest upon newspaper publishers, may be accounted for in a measure by the varied and continued new uses to which that article is applied. Among the thousands of articles of this material, some of the latest are car-wheels, water buckets, window shutters, boats, bath tubs, wash-basins, blankets, etc. But the very latest use of this material is in stoves, which is being successfully accomplished by German paper makers. A writer says of this new invention that, fire blazes cheerfuly without inflicting the slightest damage to the paper that incases it.
