A WORDERFUL DISCOVERY.

The Only Article that Will Rortere Hair on Bald Heads.

The greatest discovery of our day, so far as a large portion of luministy is concerned, is CAR-HOLINE, an article prepared from petroleum, and which effects a complete and radical cure in case of teldness, or where the hair, owing to diseases of the scalp, has become thin and tends to fall out. It is also a speedy restorative, and while its use socures a lunnelant growth of hair, it also brings back the natural color, and gives the most complete satisfaction in the using. The falling out of the hair, the accumulations of dandruif, and the premature change in color are all evidences of a diseased condition of the scalp and the glands which nourish the hair. To arrest these causes the article used muck possess medical as well as chemical virtues, and the homeo must begin under the sculp to be of permatent and lasting benefit. Such an article is CAL-BOLASSE, and, line many other wonderful discov-ories, it is found to consist of elements almost in neir natural state. Petroleum oil is the article but it is after it it a been chemically treated and cthe tollet. It was in far-off Russia that the effect of petroleum upon the halr was first observed, a Government efficer having noticed that a partially hald-handed servent of his, when trimming the hange, had a habit of wiping his oil-besmeared hands in his scanty locks, and the result was in a few mouths a much ther head of black, glossy hair than he ever had before. The oil was tried on torses and entitle that had lost their hair from the cattle plague, and the results were as rapid as they were marvelous. The manes and even the talls of horses, which had fallen out, were completely re-stored in a few weeks. These exp-riments were seralded to the world, but the knowledge was practically useless to the prematurely baid and gray, as me in civilized society could tolerate the use of refined petroleum as a dressing for the hair. But the shill of one of our chemiats has overcome the difficulty, and by a process known only to himself, he has, after very elaborate and costly experiments, succeeded in decolorizing refined petroleum, which renders it susceptible of being handled as daintily as the famous can de cologue. The experiments with the deodorized liquid on the human hair were at-sended with the most astonishing results. A few applications, where the hair was thin and falling, gave remarkable tone and vigor to the scalp and

"We have seed proportions for the hair for upward, of weathy sees, but have never had one to sell as well or give see a universal satisfaction. We therefore research it with connidence to our friends and the pentul public."

Mr. Gresses.
