

FARMERS' COLUMN.

THE BELLFLOWER is a native of Persia. There are 25 cubic feet of roots earth in a ton. There are no hoxes in Greenland and Lapland. Milk cleanliness has a great effect upon the assimilation of food. To suffer from heat, it is up to a cherry red, and the face is hot. The most durable woods in dry places are cedar, oak, yellow pine and chestnut. Sound ice, ten inches thick, will bear a pressure of 1000 pounds to the square foot. Last year Texas was an importer of grain, this year she has a surplus for exportation. It is asserted that the dairy products of the United States have twice the value of the wheat crop. It is estimated that the amount of grain grown upon the canals and the Hudson river is 1,700,000 bushels. There is no crop raised which yields so large an amount of food and with so little labor as the potato. Farmers in New Jersey and Pennsylvania are giving considerable attention to the culture of pine plants. The most fertile farms in New England today are a rule, those that are devoted to stock and dairy farming. A Kentucky firm contracted to furnish 100,000 turkeys to the Eastern market during the season of Christmas holidays. The potato grows in the house and is kept in good shape by placing the end buds of those shoots that grow too vigorously. The popping properties of corn depend upon an oil which expands on the application of heat and bursts upon the seed. It is best merely for laying on fat that oil meal is valuable, but also in the increase of the nutritive qualities of the manure pile. Now is the time to thin out poultry, call out all the hens over two years old, and keep no more cubs than are wanted for next season's use. Decayed species of any kind is highly injurious to stock. It has a paralyzing effect upon the animal fed with it, sometimes causing death. A company has been organized in New Orleans, with a capital of \$100,000, to manufacture jute bagging, which has hitherto been imported. Irrigation and drainage are often successfully united. Water from drains in uplands can be successfully employed for irrigating the lands below. The entire length of the intestinal canal of the horse is ninety feet, the small intestine being 60 feet in length and the largest twenty-four. The proprietors of many private gardens in England spend from \$25,000 to \$50,000 per annum in labor and materials alone in beautifying their grounds. At the Board of Trade at Little Falls, N. Y., there was sold during the season of 1880 cheese to the value of \$1,714,563.32 being \$645,571.25 more than was sold in 1879. A new variety of grapevine, which grows and produces fruit in the open air at Warren and Elgin, has recently been brought to the notice of the St. Petersburg Horticultural Society. Good sweet milk contains one-fourth more sugar than butter; this sugar turns to acid, and if this acid is too much developed before churning the coveted cream is destroyed. A blackish tree, with beautifully figured leaves, lately out of a marsh in Canada, when cut up, sold in New York at \$3000, the stump was sold for \$100, the product being used for making iron veneers. Jesse Owen, of Chemung county, New York, made from 8000 pounds of amber cane, raised on sixty square rods of land, sixty gallons of syrup. The seed was planted the same as corn, in hills, and cultivated both ways. In Germany the dairymen send his butter through the mail to the consumer's table. In winter it is sent in parchment paper and wrapped in common paper, in summer in tin cans or wooden boxes made expressly for that purpose. In the process of dressing hogs for English bacon the hair is removed by being sliced, instead of being skinned off, therefore the animal should not be too fat and should be kept suitable for making this single bacon, for which there is growing demand a cross with the pure Berkshire. Any land which will grow good corn or wheat will grow raspberries. The ground should be well ploughed and receive a liberal coating of manure before planting. Plant blackberries in rows three feet, and the red varieties six by three feet. If in hills, sow six feet each way, if in hills, so that they can be cultivated each way. A lady who has raised a large number of hogs says that after vainly trying the recommended remedies for lice she has hit upon the plan of giving them once or twice a week a large dose of Graham flour, in which a handful of saltpetre has been mixed. The hens like it, and are freed from lice and kept healthy through the season. E. A. R. writes that light in a milk room is injurious to the cream. He recommends coloring cream by mixing one-half pint of dark molasses in a milk pail of 100 quarts. This will cause the cream to rise better, and the butter will have a rich color and pleasant taste, besides working better. The butter must have half an ounce of salt to the pound, and "if gilt edge" must have three grains of annatto coloring to 100 gallons of cream. Dairying has made great progress during the past few years. Three thousand pounds of milk, being skinned off, will yield one hundred and twenty pounds of butter per cow, a no longer satisfactory profitable and a low grade of butter will only add to the unsatisfactory condition of the dairymen's business. It is said to cost less per pound to raise turkeys than to raise chickens. You cannot raise fine, large poultry from small, ill-formed birds, no matter how large the cock is. It is true that the cock has the greater influence in determining the external portion of the bird. The better turkey is the largest and heaviest of its species, and will give better results at the close of the season than any other. It should be, therefore, as it is, the favorite. In breeding this magnificent fowl care should be taken to procure large birds of a suitable age. The older the better, up to three years.

CENTRAL DRUG STORE,

In Lehigh, Pa., Bank St., Lehigh, Pa., Dr. Charles T. Horn, PROPRIETOR. Respectfully announces to the people that he has replenished his stock, and offers

DRUGS AND CHEMICALS

Strictly fresh and Pure. Also Hosiery and Cattle powders, Patent Medicines, Brushes, Soaps, Oils, Perfumery, Surgical Instruments, and all the latest and best of every kind. Lehigh, Pa., Sept. 18, 1880.
