How to Make a Lawn.

A correspondent of the Country Gentleman writes :-"The very best grass I have made use of for a lawn is unquestionably orchard grass. But then, to make it effectual for this purpose, no half-way measures should be practiced in preparing the ground, sowing the seed, and cutting the grass. The soil should be rich, in fine tilth, and free from weeds-The best preparation of it is to cultivate it in potatoes or some other heed crop the preseding year. If this can be taken off in August, early or late, according to climate, the seed may be safely sown in that month if not, leave it till the following spring, and

then put it in as early as possible. Plough, harrow very fine, and level the ground. Then sow at least at the rate of four bushels per acre, so that the ground can be thickly stocked. If this is not done, the grass forms tussocks, and these spoil the beauty of the lawn. Never sow clover or any other seed with this for a lawn, but one may do so with clover only for a fie d crop if desired, as both are ready at the same time to cut for hay, which, to have it tender and succulen', should be in the earliest of blessoming. After sowing, brush the surface nicely, and then roll. Cut the grass as often as it gets about four inches high. This keeps it from growing coarse, and makes a closer firmer sod. This grass is the first to shoot up in the spring, and the last to turn brown in late autumn or during the winter. Ray grass, if treated in the above manner, comes next to orchard grass in making a superior lawn."

of the same good, strong Muslin, 3-Ply Linen Bosom, Linen Wristbands, Shoulder 68 Strawberries. The last pint of strawberries is picked then what? Will you plow down the old 68 bed or go to work for another crop from the same ground ? Some prople think it best to have a bed entirely new for each year's I have also a full line of the No. 1 GRADE, which is excelled by any nowhere 68 picking. An old, and very large grower of this fruit, starts the harrow after the crop is gathered and keeps the soil mellow through June and July. He uses a fine steel toothed harrow with twelve teeth, between the rows the same as in a newly planted bed. This outs the ground fine and does not cover the plants. No matter if one-fourth to one third of the vines are rooted out, and the remainder "Jook sadly demoralized" in consequence they will soon recover, and the next crop will be all the better for the sovere scarify-68 ing. Some growers first mow off the leaves and use a plough instead of a harrow ploughing a furrow from the row, leaving an unploughed space six to nine inches wide, 68 thirning out the plants in the row with a hand plough, afterwards using the harrow between the rows, A new bed may be started now, to fruit next year by spading up a ball of earth with the plants, and setting Bottom Price Store of Lehighton. Without the plants in rows both ways and use a wheelberrow with a sheet-iron wheel, having a sharp-edged a sheet-iron wheel, having a sharp-edged rim for cutting the runners. This will do the work. The fine toothed harrow can be run both ways, so that no hand-hoeing is needed. In the matted row system, the runners may be kept out off until early in Au gust when the horse cultivation should cease and the runners be allowed to take root .-

Farmer's Journal. FARM NOTES.

-The richest and thickest cream o ntains from 55 to 65 per cent. of water. -A few drops of ammonia added to the water in a vase of flowers will preserve them much longer. -Cows should be milked at least twice

ach day, and at regular hours. The stripsings contain most of the cream, or butter, and this a poor milker rarely obtains. -Among newly set plants, cabbages and

tomatoes, the frequent use of a sharp-toothed rake, which can be passed rapidly over the ground, will destroy wast numbers of -Within a few years the exportation of

dried apples from this country to France has enormously increased. It is now said

and crack like walnuts, on occasion. They

seem to enjoy it very much, and it does them good, conducing to their more rapid fattening by the carbon they swallow. -To slip geraniums, take a bottle, fill it with water, then take your slip and wrap cotton about it about an inch from the top; press it firmly into the bottle (the cotton pre. serving the slip and keeping the water from

evaporating); then place in a sunny place, and soon roots will appear. A. A. THUMAS, Corner Ninth and F Streets. Washington, D. C., attends to Pension and Back Pay. Bounty Claims collections four hour's work out of doors, and thinks the women who in Europe de men's work in the fields are better off than the American housewife, of whose life five-sixths are spent in the kitchen. There is more

truth than poetry in this. -Many of the most pernicious weeds with which farmers have to contend are eagerly caten by sheep in their early or soft state, and ultimately may be eradicated in this way. It is stated as a fact that land stocked with sheep is comparatively free all from

-A Maine farmer says : "Where I to plant an orchard and had two locations, one in a valley surrounded by hills except on the south side, and the other a high elevation exposed to high winds, I would choose tha latter in preference to the former. The greaobject is to keep back the blooming as long as possible, and this can be done best in
