

Autumn Sowing.

Most people have observed, no doubt, that self sown seeds, that is, seed that have from the growing plants of the previous sesson, sometimes produce the stronged and most healty plants that bloom the most freely. This is true of soversi kinds, and particularly of these that suffer The renson is that self grown areas got a very healthy growth in the spring, vegetating as soon as frost la gone, and are good aired plants at the time we usually put secia in the ground, even if they do not start in the fail. They thus mature and flower during the cool weather of spring. The clarkies and nemophiles and annual lackspurs are noted examples. There are also several varieties of hardy apouels that do well with spring sowing, that will bear autumn sowing in the open ground, and reward no with early spring flowers. Sweet alymum and white caudy tust will give us abundance of white for early cuiting if sown In enturn. In a shady soil the portulaces may be sown in autumn with good success. Boods of biennials and perennials, if sown sariy enough to produce strong little plants, will flower next summer ; pansies and chinese panks, though they bloom the first summer Haown in the spring, will make much stronger plants and flower more freely and earlier if young plants are grown in the

All hardy plants, the pmon ha, holly hocks, delphiniums perennial phlox, day lily, efficentes, and plants of a similar character, indeed, all that will indure our winters should be planted in the autumu, if possible, as they thus get a good start in the spring. -Floral Guide.

So-Called "Paper Farmers." They have tested theories, while others raised crops for market; they have given a glory to farming it would not otherwise posses. Fancy farmers have charged the wild hog into the Suffolk and Berkshire, the wild eattle of British into shorthorns, the mountain sheep with its lean body and hair fleece into the Southdown and Merino, They brought up the milk of cows from pints to gallons. They have lengthened the sirloin of the bullock, enlarged the ham of the bog. given strength to the shoulder of the ox endered finer the wool of the sheep, added fleatness to the horse, and made more beautiful every animal that is kept in the service of man, They have improved and hastened the development of all domestic animals till they scarcely resemble the oper from which they sprang. Fancy farmers introduced irrigation and under draining ; also grinding and cocking for stock. They baye brought guana from Peru and nitrate of sods from Chili. They introduced and domesticated all the plants we have of foreign origin. They brought out the theory of the rotation of crops as a natural means of keeping up and increasing the fortility of the seil. They first ground up gypsum and bones, and treated the latter with sold to make manure of peculiar value. They first analyzed soil as a means of determining what was wanted to increase its fertility They introduced the most improved meth eds of raising and distributing water Fancy farmers or fancy borticulturist have given us all our varieties of fruits, vege tables and flowers. A fancy former in Ver nt, a few years ago, originated the Early Rose potato, which added millions of del iars to the wealth of the country and prov ed a most important accession in every parof the world where introduced. Another of these same fancy men originated the Wil-
