—JURISDICTION.

—The anthracite coal trade continues in much the same condition as this time last week, says Monday's Philadelphia Ledger. The better supply of vessels to the East-ports well filled up the short stock there, and until the fuller amount there is worked out of new orders for coal may be expected to be a little slack. The continuance of the drought in the coal regions so much interferes with coal production that it is not probable that there will be any general outcry for coal in production at the mines. The orders for coal are pretty full and the present situation of the trade is generally satisfactory. The demand for coal is not the price, most meet generally expectations than for several years before at this season of the year. The outlook for business during the next year, and, indeed, even into the next year, is very good, and the quantity moved will engage all the shipping facilities. Vessels may be in a little better supply, but rates of freight are not lower. The season is so far advanced that the demand for vessels will be so great that it does not seem possible that materially lower rates can prevail this year. The committees of the Lehigh and Schuylkill Coal Exchanges met on Friday and resolved that no change in prices would be recommended for October. The only change likely to be made in the price of coal this month is the decline of 25 cents, per ton in Lykens Valley red ash coal. The prices of white ash and black ash coal will be so great that it does not seem possible that materially lower rates can prevail this year.
