BARBARA'S LOVE STORY, BY ANTHONY R. ANDERSON.

“And now that do you intend to do for your living, Barbara?”

“I have not thought anything about the matter yet, aunty.”

“I am passionately fond of music, and my fingers play lovingly over the familiar keys.”

“I wonder to myself, most miserably, what Will Rexford will say and do when I am gone.”

“Papa was all that is kind and noble,” I cry passionately.

“I think you forget yourself, Barbara,” she says idly.

“I am not for myself alone. I cannot help feeling that the memory of my dear father has been cruelly insulted by the letter which has just reached me.”

“I am not for myself alone. I cannot help feeling that the memory of my dear father has been cruelly insulted by the letter which has just reached me.”

many pennies, judging from your rapid expression—laughs Mr. Rexford.

“And then we begin to discuss the relative merits and defects of other poets, forgetting all about the important fact that belongs to the creme-de-la-creme while I am only a poor governess.”

“I met him very often in my walks after this. He is so kind and courteous, what else could I do?”

OUR SOUTHERN LETTER.

Special to the Carbon Advocate. Your correspondent spent about three weeks in the city of Charlotte, the county seat of Mecklenburg, N. C.

The Carolinian Military Institute is also located here. It was established in 1873 by Gen. J. E. Johnston.

A new cotton factory is now in successful operation here, near by W. Oats & Bros.

These gentlemen are the right men in the right place—men of good morals, cultivated, intelligent, honest, and industrious.

SCIENTIFIC MISCELLANY. For the Carbon Advocate.

French hydrographers find the water of the Mediterranean sea to be saltier and denser than in the Atlantic.

—Herr Koblentz has recently made experiments in the use of electricity in the manufacture of iron.

—Extended microscopical examinations have convinced Prof. Reisch that coal is a compound of carbon and hydrogen.

—Ninety per cent. of the yellow sand of the Sahara desert is found to be quartz grains, the angles of which are remarkably rounded—evidently by attrition.

—The electrical piano of Bondet is a recent novel application of electricity. An ordinary instrument is provided with two sets of hammers, the upper or electric series being brought into action by pressing on plain keys.
