with a nin in each side, and blow out the

inside, leaving a clear shell, than to boil

The Lime, the popular bean smong smateurs and market gargeners, is slow in find the worthy poor, comes about ing is way to the gardens of farmers. The dry as near being a dead letter as beans sell for several dollars a bushel, and anything we know of. If it the market has never been adequately supisn't dead, in ten cases out of pied. Lims beans are rathly last isn't dead, in ten cases out of pied as bountifully as most other pole plied. Lims beans are easily raised, and beans ; and they continue to blossom and bear until kirled by the frost. We know o no reason why they cannot be made specialty, like hops or tobacco, and grown irade against the invasion of on a large scale. They would require better wil and treatment than the common field beau, but as the price is three times greater. these could well be afforded. A rich graypeople and miscellaneous no- elly or sandy loam suits them best, and the bodies, and finally, rising to phosphatic manures are well adapted to an alpine height of scorn, ex found them to run too much to vines, even claims: "Aye, all of you here with heavy dressings of compost prepared ORIENTAL JOURNAL!! are Philistines-mere Philis- from muck and stable manure. The yine tines!" "Yes," said an old is a strong grower, and requires abundant gentleman, softly, "we are thickly from the top to the bottom of the should be four feet apart, and the hills four feet apart in the row. In planting we prefor to put the eye downwards, and not more than one inch deep. The first of June is early enough for this latitude. This lean needs frequent cultivation, until the vines s'isde the ground. This crop is well suited for farmers remote from cities and markets. The market gardener will not grow Lima beans to sell dry, because they are worth nore in the green state, and he can sell all he can raise. But the farmer, however renote from the city, can market his whole erop in the winter, and be well paid for his

labor .- Agriculturist. Bequisites to Success with Onions. Onions differ from most other crops in not requiring a rotation. In some places

KIDNEY-WORT the hard has been in onions annually for half a century. If the crop is to be grown for the first time, newly cleared land is best, and next to that, coil which has been in corn or p-tatoes. A good, deep, rich beam, is essential, as is heavy manuring Fifty lowls of stable manure to the acre are an ordinary manuring, and may be supdemented by sshee, bone flour, or guano, as a top dressing. The scods should be so yn very early , should be of the previous year's growth, and from a reliable raiser The rows are a feet apart, leaving every se enth for a path, and from three to six land not before in onions, thin sowing is bette than thick. After sowing, roll the surface. Son a sow an ounce or two of radish el with every pound of enion seed. The relishes come up in a few days and mark he rows so that a hand cultivator or push hoe can be run close to the nows even before the onions are up. - American Agri

Poles for Boans and Other Climbers. Waste birches and alders so esminants used for bean poles, are about the possest, for they last only one season at the best, and sometimes break off at the surface of the ground, and let down the beautiful pyramid f green before the pods are ripe. White Cotar from the swamps is durable, and the rough back enables the vines to climb without may nelp from strings, but there are not always accompible. Red Cedar is much more widely distributed, and on the whole makes the best bean pole. The wood is as good as White Cedar, and young trees, from which poles are made, grow quite stout at the ground, and, if well set, will resist very strong winds, A set of these poles will last Shorn of its Power to Harm.
