## FARMERS' COLUMN

The Feeding of Stock Prof. D. D. Siade, Harvard University

writes as follows in the American Agricul The proximate principles that are organ colic, softens the gums, reduces inflamulation nitrogenous substances, as they contain nitand gives tone and energy to the whole avstem. Mas. Wisslow's Scotning Staur this element. Starch enters largely into the ron CRILDREN TERTRING is pleasant to the Laste, and is the pracription of one of the composition of the various grains, corn, wheat, rye, cats. It exists also in potatoes nurses in the United States, and is for sale by all druggists throughout the world. Price 25 cents a bottle. and this always takes place in the process o digestion. Sugar is also derived from both animal and vegetable sources. Thus we have milk sugar and liver sugar, which are produced in the mammary gland and in the liver, as also sugar of honey, prepared by the bee. Under vegetable sugars, we have the cane, grape, and sugar of starch. The fate are also derived from both animal and vegetable substances. Certain kinds of food favor the production of fat more than iac Belts and Electric Appliances on trial others. This is particularly the case with for thirty days to men (young or old) who those containing large quantities of sugar. is about the only American are afflicted with nervous debility, but vi- It is a well established fact that the negroes as well as the animals, employed in sugar growing countries grow remarkably lat dur ing the season of sugar-making, and lose this condition when the season is finished But saccharine materials are not sufficient for this purpose, as is shown when swine are fed on substances containing abundance

of starch, which, as we have meen, is easily converted into sugar by the process of d gestion. Fatty or oily matters must also b applied. Pigs led on boiled potatoes alone which contain touch starch, fatten muare also given them in some form with the food. The nitrogenous substances, albumen, fibrine, and caseine, differ from the other preximate principles in that they coagulate. ion in other substances. These enter large ly into the animal tissues and fluids, and yet experiments show that although highly nutritions and necessary as food, if given alone, animals become after a time enfeeble and setually may die of starvation. No one class of proximate principles can be bed-bugs, skunks, chipmunks; gophers. 15c sufficient for the nutrition of the body, but the food to be nurishing must contain all of the o, and must be mixed together in the proportions best suited for the different kinds of animals, and for the purposes in view, whether the growth of muscle and strength, the increase of fat, or a great amount of the milk secretion, without e gard to its quality. In a word, that our mimols may thrive well, there must be a variety in the food gives. Steaming . ooking the lood under certain circumstan ces may render some articles more palatable. and possibly more mitritious and more eas

ily digested, but there is no economy in giving to unimals, from whom we expect anything in return, poor food of any description especially if we are obliged to disguise pend upon the age, condition, object in young or old, married or single, if out of view, and amount of exercise. Feed with remembering that in young animals, flesh strength, and fat are to be formed. Grafting the Grape Vine-A New

We desire to have new varieties of grapes me quickly into bearing, but vines from nurseries are frequently tardy. Even after properly grafted may produce fruit in a quarian subjects as well as to the coshort time. Grafting on cut-off underground gnarly stumps or vines, as usually practised, is very uncertain at best. Our method is to take a geod strong branch or cane of vine, or even a whole young vine when a change of fruit is desired, and whip the graft in the usual way. We then cover up the vine in the soil as near the roots as possible, leaving above ground only a buil or two of the graft. It is well known how quickly a layer will make a bearing vine,as it has the advantage of the parent roots as well as the roots it produces. The layer may be extended, if long enough, to grow where the vine is to remain. Vineyards SOLD BY DRUCCISTS. Price \$1. may in this way be quickly changed to

### better varieties .- Agriculturist. Hungarian Grass This is a valuable crop supplying good

green fodder, as well as hay, and a large bezel, into which an extra strong crystal is quantity can be obtained from a small area after the ordinary hay crop is pretty ac sown after rye, or on and ground. Plow the land to a moderate depth and make the sur face very fine. A liberal dressing of fine rich. If the crop is wanted for feeding sown at intervals from the last of May (at the North), to the middle or last of July. It for hay, delay sowing until about the middle of June, as the plants will not grow Cases about ten months ago, and the other rapidly until the nights are warm; this trame back to me with the request to will give pienty of time for a full growth, make it wind easier. On examination I Use fresh and well ripened seed ; one bush found that the stem was rusty, and I in el per acre is sufficient, though a bushel and quired into the cause of it. The gentleman at half is sometimes used. The crop should stated to me that he was starting some saw logs that had ledged in the bend of the riv. until the heads of the grass are well formed. -Agriculturist.

-Frequent cultivation is a good substiit. When he got it out it was running and tute for manure but pays much better with e thought all right. In about three months manure than without. This we have tries he found that the stem was hard to turn and on garden crops, especially potatoes, cabl can say that the watch is all that the old saw has come down to us from the fathmpany claims for it and recommend it to ers, that he who would have early cabbage sprouts must hoe them every morning be fore brenkfast. We have tried this in the spring time for meenings enough to prove that it is not one of the old wives fables. In
