On the subject of color-blindness, a correspondent writes to the Pall Mail Gazette: "A very large proportion of the cases of so-called color-blindness is, I am convinced, due to ignorance, and, in confirmation of this opinion, there is the undoubted fact that it is rarely found in examination of female candidates. If color-blindness is an organic defect of the visual apparatus, surely it ought to exist in somewhere about the same ratio in the male and female. I don't for a moment deny the existence of genuine color-blindness; but I do contend that the genuine defect is a rare one. My suggestion is that instruction in colors and their names also form a distinct item in the curriculum of all elementary schools."
