The Lutheran Church was "filled to overflowing" on Christmas eve, 1885; the occasion being the celebration of the birth of our Saviour. The church room, in the vicinity of the pulpit, was tastefully decorated. The exercises included the singing of Christmas anthems, responsive reading and remarks by the pastor and A. M. Mehrkam. At the close of the evening's exercises the little one's hearts were made happy by the usual distribution of candies and oranges.

At the reformed church the same evening, the large Sunday school room was very handsomely decorated with evergreen, and the usual order of exercises—the singing of Christmas carols, address by the pastor, etc.—proceeded with. The large room was completely crowded with a delighted audience. The exercises of the evening concluded with the distribution of a choice box of candy to each member of the school.

The Methodist Church was artistically decorated with evergreen and flags which made a very pleasing appearance; both the school room and the large audience room were filled with members of the school and people from Weissport and Packerton. A very interesting programme consisting of bible reading, music by the choir and several very appropriate tableaux, the pastor made a few remarks relative to the occasion, and here as in the sister churches, the members of the school were liberally treated to candy, cakes and oranges. The several members of the school who had the management of the exercises in hand deserve to be commended on the successful termination of the evening's exercises.

The Iron Trade. The trade in pig iron continues brisk. A further advance of prices is however being discouraged in order to prevent more furnaces from blowing in.

Gray dry at \$15 and \$16.50. The manufacture of base ball in this country has become an important industry, and an ingenious one, too, according to the description given of the process: First, there is a little hard rubber ball; around which there is wound a strong blue coarse yarn, and when this reaches a prescribed size, it is firmly wrapped with white Venetian yarn.

The balls are now placed in an oven and baked until the moisture is taken out of them and they are reduced in size, this making them solid. They are then coated with cement, which causes the balls to retain their shape, and they cannot be knocked crooked. After this comes some fine blue yarn, and around the whole is placed fine white gilling twine. The balls are weighed, each to have a certain weight, and the covers are put on, these being made of the best horse hide. It consists of two pieces, each cut in the shape of the figure 8. By bending one section one way and the other in an opposite direction, a complete cover is obtained. This is a simple and effectual substitute for the former method of covering, with four pieces of leather.
