"But if Mrs. Milner does not object."

A SPRING IN A WATCH

AN IMPORTANT BIT OF STEEL THAT FREQUENTLY BREAKS.

Watchmakors Nay That Sudden Changes of Weather Are Dangerons to These Unpertain Pieces of Mochanism-Male aprings in Expensive Watches.

"Mainsprings are very much like peo-ple," said a Broadway watchmaker the pie," said a broadway watchmaker the other day. "They are as asceptible to extreme degrees of heat and cold as human beings. When the thermometer is howering around the freezing point or dancing away up in the nineties the lit-tle mainspring will give up in disgust and uncoll itself and die, just as men succamb to freezing or sumstroke." This uncertain dires of uncharing in the

This uncertain piece of nucliarian is supposed to be adjusted to meet the various degrees of temperature, but Warrous degrees of temperature, but when the change is very great and comes with short notice there is nothing that can prevent them from sampling. They are made in Switzerland of the very finest quality of steel, abscintely flawhess. Very often the watchmaker can detect a bad spring before putting it in the watch, either by its color or the active of the very often bank. the softness of its spring. These have been too highly tempered in the making, and instead of being subjected to merely a red heat the fire has been brought to a real next, thus weakening the strength to white heat, thus weakening the strength of the metal. The finest watches that are handled by reliable dealers are put through a "cooking and freezing" proc-ess before they are sold, for the purpose of testing their reliability in all temper-atures. atures.

The watch is first placed in a little metal box, which is made airtight. Then a strong gas flame is turned on The under surface of the box and is kept there for two or three hours, so that the watch is so hot at the end of that time that it could not be touched with the bare hand. From this it is immediated with the

ately taken and put into another me-tallic box which is buried in ice. There the costly watch is allowed to freeze

for an equal length of time, when its torture ceases and the examination is made. If during this excessive test the urolled in trades unions.

made. If during this excessive test the watch appears to have ticked merrily on without deviating a fractional part of a second it is placed back in the case and marked guaranteed for two years." The mainspring is the first piece of mechanism that succumbs to the test. If it survives nothing else need be foared. Mainsprings are, however, about the only part of a watch that the cameler suffer

Like the human frame, if the ribbonike little coil of steel can withstand the ef-fects of this change it may be considered proof against breaking when the change proof against breaking when the change or copper. Like the human frame, if the ribbonlike Sweet oil and putty powder, followed

### A Million Friends

A triend in need is a filend indeed, and Into the dealer's with blood in their eyes, declaring that they have paid an enor-mous price for the timepiece and the mainspiring has broken after only a week's use. "That is nothing," remarked the jewel-er. "We have them samp in our case before the watch has ever been shown for sals." Others imagine that they might have wound the watch too tight but this does not harm it. It is rather

before the watch has ever been shown for alls. Others imagine that they might have wound the watch too tight but this does not harm it. It is rather the jerky, hurried winding that will eventually tell on the temper of the metal. Every good stem winder has a stop pheed in the stem, which prevents the winding too tight.
