Indian Juggling.

The fort of Calcutta, commonly known as Fort William, is one of the most splendid and convenient military establishments

festivity, from the presence of native jugglers, renowned for their surprising skill and dexterity. The performances of these strange people have been so often described, that I shall only make mention of a few, for otherwise I might tire the reader. One of them struck me as being curious PANAMA BAY, N. G., Feb. 3, 1861. from its having a strong resemblance to the facts recorded in sacred history, as having been performed by the magicians of Egypt, in the time of Moses, and in the presence of Pharaoh. As it is well known that the Hindu tricks have been handed down from the most distant ages, from fa-

her to son, there is little wonder that such a similarity can exist. The particular trick alluded to, is the apparent conversion of a brass coin into a snake. The juggler gave me the coin to hold, and then seated himself, about five yards from me, on a small rug, from which he never attempted to move during the whole performance. I showed the coin to several persons who were close beside me, on a form in front of the juggler. At a sign from him, I not only grasped the coin I held firmly in my right hand, but, crossing that hand with equal tightness with the left, I enclosed them both as firmly as I could between my knees. Of course I was positively certain that the small coin was within my double fists. The juggler then began a sort of incantation, accompanied by a monotonous and discordant kind of recitative, and repeating the words, Ram, Sammu, during some minutes. He then suddenly stop-ped, and, still keeping his seat, made a quick motion with his right hand, as if throwing something at me, giving at the same time a puff with his mouth.

At that instant I felt my hands suddendistend, and become partly open, while experienced a sensation as if a cold ball In addition to the common English branches, instructions will be given in Latin Greek, and disagreeable, was now between my French, German, and the Higher Mathematics, also, in Drawing, Painting, and music.

He then took it cautiously by the tail, and opening his mouth to its widest extent, let the head of the snake drop into it, and deliberately commenced to swallow the animal, till the end of the tail only was visible; then mak ing a sudden gulp, the whole of the snake was apparently swallowed. During the remainder of the performances, we never saw this snake again, nor did the man profess his ability to make it re-appear; but he performed another snake trick, which surprised us very much. He took from a bag another cobra-di capello, and, walking into the centre of the room, enclosed it in his hands in a folded state. He waved or shook it for some time in this condition, and then opened his fists, when, hey, presto!-the snake was gone, and in its place appeared several small ones, which he suffered to fall from his hands, when

The shadows of all day long play at silent games of beauty. Everything is double if it stands in light. The tree sees an unrevealed and muffled self-lying darkly along the ground. The slender stems of flowers, golden rod, way side asters, meadow daisies, and rare lilies, (rare and yet abundant, in every nice, level meadow,) cast forth a dim and tremulous line of shadow, that lies long all the morning, shortening till noon, and creaping out again from the root all afternoon until the sun shoots it westward in the morning. A million shadowy arrows such as these spring from Apollo's bow of light at every step. Fly-ing in every direction they cross, interlaing in every direction they cross, interla-cing each other in a soft net-work of dim lines. The fort is of en the scene of animated turn been current in society. I do not know whether any notice of this is not the highest style of culture, yet is nobler in its aims and uses than any other field. If so, you will perhaps put upon the scene of this is not the highest style of culture, yet is nobler in its aims and uses than any other record the 'squaring of the circle' which I send you. It is as follows: scholastic education is imperfect which does not tend to develop the religious nature, so is any religious education inadequate which fails to excreise healthfully the intellectual nature. But the school is the grand agency for

the awakening and guidance of the youthful mind, for imparting to it that salutary discipline which shall tend to form habits of intellectual honesty and fearlessness, of mental energy and patience. It is not designed to be a finely ordered shop making mere intellectual machines of its scholars, but to be a mental garden in which vigorous growth shall be fostered and guided by wise skill, in which all enriching influences shall be exerted for the beautifying and perfecting of the immortal growths that rise heavenward therein.

This is not imaginative, but more real and important than almost any other earthly interest. And because it is so, we feel justified in calling attention to the real nature and unspeakably great benefits of true education.
