Plants for Special Purposes.

We take the following interesting and valuable remarks in the adaption of plants for special purposes from Vick's New Illustrated Catalogue of seeds, just published : Much disappointment often results by

selecting plants that are not well adapted to the purposes for which they are designed. Most of the trailing Lobelias, for instance, are superb for pots and hanging baskets; but if planted in the garden, to add to the effect, and where it is desirable to make a good show to be seen at a distance, they are worthless. This is the reason why one customer will write, 'Those Lobelias you sent me were beautiful; I never had anything so graceful in a basket -a wilderness of delicate flowers, and in bloom so long;' while another says, 'All the seeds produced magnificent flowers except those choice Lobelias-they were tiny things, with flowers no better than many of our weeds.' Some inadvertently place tall and free going plants in the front of flower beds, instead of using them for the background; and, because they dislike them out of place, imagine that they can be of no use anywhere, while in their proper place they are really admirable. There are places where even the coarse Sunflower can be used with advantage and be made to produce a fine effect. Sad mistakes are often made with running or climbing plants. Of course they are comparatively worthless unless provided with the necessary support. Indeed, instead of being an ornament, they are almost a nuisance, if allowed to run about the ground, where they can never make a natural and healthy growth. The same plants, when used to cover an arbor. or buildings, or fence, or when properly trained upon a trellis provided for the pur pose, are the most effectve means provided for garden decoration. Here we have the true drapery of nature.

To aid in selecting seeds for special purposes, I name a few that can be used with advantage. Others, however, not mentioned here, are nearly or equally good, as I have not the space only to mention a

Flowers for a Constant Brilliant Show. These will be found in the first department of the Catalogue, and are familiar, doubtless, to most of our readers. The Aster, Antrrehinum, Balsam, Stock, Dianthus, Delphinium, Pansy, Petunia; Phlox, Drummondi, Portulaca, Salpiglossis, Scabiosa, Double Zinnia, and other varieties that we have not space to name, should have space in every collection.

For a Summer Hedge .- There are some situations where a low hedge or screen is very useful and ornamental. I don't know of anything that will make a prettier hedge, supported by neat brush, than the Sweet Pea, if sown early in spring and deep in the ground-not less than four inchesand the earth is kept well hoed up to the plants. In good soil, the hedge will be three or four feet high. The Amaranthus makes a fine ornamental hedge; the foilage is dark, rich, and some varieties two or three colored. Delphinium cordiopetalum always pleased me for this purpose-about eighteen inches or two feet in height .-Gomphrena globosa, in a good rich soil. makes a pretty hedge two feet in height.

Ornamental leaved Plants .- Plants with ornamental leaves are becoming popular in all parts of the world. They produce a very fine effect when grown in a group of half a dozen or more together. For use. fulness in this respect, I know of nothing better than Perilla Nankinensis, Cannas, Ricinus and Amaranthus. The seeds of all these but the Cannas may be sown in the open ground, and will produce a splendid effect the first season; or they may be transplanted from the hot bed. The Ricinus has a tap-root, and if grown in a hot bed should be in pots or in some manner so that they may be transplanted without injury The finest I have ever grown, however, were sown in the open ground about the time of corn-planting. The Canna does best started in heat. The Ricinus is the tallest of those named-from four to ten feet high-and should occupy the centre of the group.

Flowers Desirable for Fragrance. For fragrance, nothing equals the Mignonette, Sweet Asylum, and Sweet Peas.

For Baskets.-Convolvulus, Fenzlia, Ipomœa, Leptosiphon, (particularly L. hybrida) Loasa, Lobelia, Mignonette, Nemo phila, Petunia, Phlox Drummondi, Thunbergia, Tropæolum, Verbena, Sweet Alyssum.

Those of a pretty strong running habit, like the Morning Glories and Trapæolum majus, should have the tops pinched off if they run too far, which will make them dwarf and branching. All the varieties mentioned above, except the running sorts, are excellent for pots.

Climbing Plants.-These are particu larly valuable for covering buildings, fences, etc., and making beautiful, what but for them would be very unsightly. Nothing will give more satisfaction than the annual Climbers when properly cared for and used in the right place.
