SHUTTLE OR LOCK STITCH, THE Grover & Baker Elastic-Stitch Sewing Machines are superior to all others for the following reasons:

1. They sew direct from the spools, and require no rewinding of thread:

2. They are more easily understood and used, and less liable to derangement than other machines.

3. They are capable of executing perfectly, without change of adjustment, a much greater variety of work than other machines.

change of adjustment, a much greater variety of work
than other machines.

4. The stitch made by these machines is much more
firm, elastic, and durable, especially upon articles
which require to be washed and ironed, than any
other stitch.

5. This stitch, owing to the manner in which the
under thread is inwrought, is much the most plump
and beautiful in use, and retains this plumpness and
beauty even upon articles frequently washed and
ironed until they are worn out.

6. The structure of the seam is such that though it
be cut or broken at intervals of only a few stitches it

will neither open, run, or ravei, our remains arm and durable.

7. Unlike other machines, these fasten both ends of the seam by their own operation.

8. With these machines, white silk is used upon the right or face side of the seam, cotton may be used upon the other side without lessening the strength or durability of the seam. This can be done on no other machine, and is a great saving upon all articles stitched or made up with silk.

9. These machines, in addition to their superior merits as instruments for sewing, by a change of adjustment, easily learned and practiced, execute the most beautiful and permanent embroidery and ornamental work.
