#### The Volcano of Santorin.

A<sup>®</sup> correspondent of the Boston Advestiser, writing from Greece, thus speaks of a visit to the volcanic island of Santorin:

Before us is now seen a vast column of vapor and smoke rising as it seemed out of the sea, and soaring high aloft over the isle Santorin. It is the new volcano now in full blast.

Santorin itself is evidently 'sea born' and was known as such by the ancients It is about twelve miles long and three to four broad in the broadest part. It is shaped like a crescent, the horns pointed westward, and tapering towards the points like a new moon. Between the horns are two other volcanic islets, so there is a vast basin enclosed which is the crater of an old volcano, but now the great harbor of

Santorin. The volcano sleeps for an uncertain
