PHILADELPHIA.

The general improvement in business the past year, with the prospect of a very large increased demand for all kinds of Dress Goods, induced all American buyers of Foreign Goods to place immense orders. This was universally the case, so much so that, perhaps without exageration, 50 per cent, more goods were imported than the country could possibly consume. As a consequence, there has been a great break in prices in a great many fabrics, which we shall

· AGRICULTURE

Meeting of the Lancaster County Agricultu-ral and Morticultural Society—Crop Re-ports—Effects of the Severa Weather— Essay—A Blast at the Penusylva. pia Agricultural College,

&c. &c. The February meeting of the Lancaster County Agricultural and Horticultural society was held in their room in city hall yesterday afternoon, President Witmer in the chair.

In the absence of the secretary, M. D. Kendig, Calvin Cooper acted as secretary. The reading of the minutes of last meeting was dispensed with. The following members and visitors were

Joseph F. Witmer, president, Paradise; Calvin Cooper, Bird-in-Hand; Henry Kurtz, Mount Joy; Casper Hiller, Conestoga : John C. Linville, Salisbury ; Wm. H. Brosius, Drumore ; Washington L. Hershey, Chickies : Frank R. Diffenderffer, city : Henry Shiffner, Upper Leacock ; Henry Herr, Lancaster township; J. M. Johnston, city; Cyrus Neff, Manor; John Sterline, West Hempfield; Simon P. Eby, city; John Resh, Pequea; W. W. Griest, city; Dr. Wm. Compton, city; E. S. Hershey; James Wood, Little Britain John H. Frey, Ephrata; J. H. Her-shey, Rohrerstown; Dr. C. A. Greene,

city; Levi S. Reist, Oregon.
M. L. Greider, of Rapho, and John E. Huber, of Pequea, were proposed for mem-bership and elected. Crop Reports.

Henry Kurtz said he could report a very heavy crop of ice and snow, and an abundance of unstripped tobacco. Of the stripped tobacco only a small proportion has been sold. The ground is so deeply covered with snow and ice that it is impossible to tell what is the condition of the winter wheat. It is reported that the peach trees and some of the apple trees are frozen.

Casper Hiller said that if the peach trees were not frozen it might be regarded as almost a miracle; for it is generally conceded that the peach will not stand a temperature of more than 10 to 15 below zero, and this winter the mercury has fallen to 20 and 24 below. In 1856, when the mercury fell to 11 below zero, peach trees planted on high and dry ground survived the winter, while those planted in the low ground were killed. This year the wood of the peach is plump and full of sap, and there is a chance that the trees may survive. It is not likely that the apple trees will be

John C. Linville did not think the peach trees would be killed. The past season was remarkably dry, and the wood became mature and hardy before the cold weather set in. Many young peach and pear trees have, however, been killed by the rabbits, which have entirely girdled them. He feared that the wheat in low and wet

sections was badly damaged, as it has been so long covered with solid ice. Johnson Miller had little to report except that he still remained in winter quarters, the mercury this morning marking 4 degrees below zero. He fears the wheat has been greatly injured by the severe weather. He never know a good harvest to follow a very cold winter.

President Witmer said he had cut through the snow and ice to examine the wheat, but a neighbor of his, who had filled an ice-house with ice cut from the

pond in a wheat field, reported that the wheat looked green and healthy. Casper Hiller said that this winter the ground was well covered with snow before the severe weather came; so that the great sheets of ice with which the ground is covered, do not lie directly on the young wheat, but are found some distance above it, and therefore not so liable to kill it. more ice and snow on the ground in the

James Wood said he thought there was winter of 1856 than there is this winter, and yet we had an unusually good crop of straw that year. Dr. C. A. Greene read the following short paper on "Insects" and the longer one upon the horse:

Insects. Prof. Riley has notified the farmers of Laucaster county that the seventeen-year locusts will make their unwelcome appearance this summer in this county; and my prediction is that if they so show themselves no decided harm will will take place -solely from the fact that insect life in all its forms will be largely killed off by the continuous severe cold of this winter. Neither the mature insets, larva, chrysalis,

The Horse.

or egg can stand freezing.

There is no animal to which man is more decidedly indebted than the noble, intelligent, willing horse, and many men so understand it, and treat him with due consideration. Many persons think as much of his comfort as they do of their own. He is always well fed at proper times and well cleaned and watered, kept in a well ventilated warm stable. It gives me real pleasure to stand and look at the Dress Goods Dyed either in the piece or in Garments; also, all kinds of siks, Ribbons, Linen, Cotton and Woolen Goods Dyed. Gentlemen's Coats, Overcoats, Pants. Vests, &c., Dyed or Scoured; also, Indigo Blue Dyeing done.

All orders or goods lett with us will receive property attention. that they like to take him some extra tidbits, and feed him with their own hands. Unfortunately for the reasoning animal there is another class of humans who are either ignorant of his wants or else they are of such brutal instincts themselves that his wants are only partially fulfilled, and such horses suffer more than man has any knowledge of. Wonderful and exceedingly interesting anecdotes have been told and verified in reference to the reasoning ability of this useful quadruped. I've studied him well, and I believe if his tongue was unloosened sometimes, he would give his owner such a scorehing, withering lecture on ingratitude as would force him from real remorse to treat him as he deserves.

The horse and man are a good deal alike. He wants a variety of food just like man. Some farmers think if they throw him a half peck of corn in the ear they have well fed him and they do it day after day. Now, a horse gets just as tired of whole corn as a man does of liver or a horse, which would not, after a time, eat bread, sugar, beets, carrots, cabbages, and even the potato peelings and other table droppings, especially when some bran or meal was liberally sprinkled on

too often, and its influence is a matter of economy, if not of kindness; it pays anyone to keep the animal warm, and any man who owns or has hired a horse and will let him stand unblanketed in the streets for hours, ought to get thirty days imprisonment for the first offence of the kind. During the winter the bridle bit should always be warmed before it is placed in the horse's month. Hundreds of horses suffer pain by the frozen bit hav, ing taken off the skin from the tongue and mouth by this cruel proceeding. To all those persons who in order to

make the horse "show off" (as they say) to advantage, tightly check up the head, would only say it is extremely cruel, and if they con't believe it let them put a wooden bit in their own mouth and let some one draw their head back for ten minutes and I'll guarantee they will never

so tantalize him again. Galls and sores on borses are usually caused by pure carelessness on the part of change the arrangement of the harness or under the harness which galls the animal. See that the collars are always clean and well oiled. If the inside is left dirty it is bound to make a sore.

Blinders are the relic of barbarus times. A horse does not need such an appendage any more than a man does. One half of the horses know more than men do, and if they could express their opinion on this subject they would say : "Take off these horrid things; at the very time when I am | use as manure. the most anxious to know whether there is danger in my rear, I can't see, and if I could my fears would at once be quieted. Why keep me in ignorance of what is behind me? You think I'll shy! O,no, I shy because I imagine danger. Besides, the stiff things strike my eyes, and the bones around my eyes and make them very much inflamed and uncomfortable." From my experience I can advisedly say they are of no use whatever, and there is no horse in the world, but will soon become so intelligent without them as in no manner to require them. Besides the above they often cause decided suffering by the closeness of the blinder injuring the eyes and sight. Film and cataract of the eye are often caused by the blinder.

Most animals are far better off without the crupper. It galls and pains them, and whenever it can be, it should be left off. In fine, let me say a horse if properly cared for, well-fed, well-kept in a clean, wellventilated stable, ought and will be in good working condition at twenty years of age, and it richly pays the owner to eare kindly for this intelligent, willing, obedient and affectionate animal

Henry Kurtz endorsed nearly all Dr. Greene said about the horse but didn't think that blinders could be dispensed with, especially where the horse was hitched to reaping or mowing machines. Casper Hiller took exception to the statement that the seventeen-year locust would make its appearance next summer. He said the time of its appearance would be in 1885. He did not believe either, that | they have carefully considered the subject locust or other insects would be by the severe weather.

Wm. H. Brosius also thought the insects were doing very well during their hiber- annual income of about \$30,000-said innation. One inch below the surface of the earth is very little below the freezing point.

and an income of about 20,000 and income nation. One inch below the surface of come derived from a congressional land grant, donating lands to our state for special educational purposes. The inter-

Calvin Cooper was much pleased with what Dr. Greene had said about the horse and called special attention to the cruelty of placing frozen iron bits in their mouths. He advised that the bits should be covered with leather, or if this was thought to be too much trouble, dip the bit into water before placing it into the horse's mouth; The iron will be thus immediately covered with a thin film of ice, which will prevent it from adhering to the skin of the

S. P. Eby, esq., endorsed all Dr. Greene said in behalf of the horse, but did not think the frost would kill the insects. He inclined to the opinion that locusts and other insects had holes far below the sur face, into which they could retreat when the winter became cold. It is well known that worms and the summer locustsdave such retreats.

fact that all insects were killed when But the ignorant management of these they were exposed to a temperature a few farms by the college, and their niggardly

posed to the severest cold.

Mr. Linville said that Prof. Rathvon that "experimental farms" or "experand other entomologists held that cold weather will not kill the insects, whose terms of life extend beyond a single year. but that they are often destroyed by wet weather. Mr. Linville agreed with Dr. the State college has utterly failed to do its Greene in all he had said in regard to the plain duty in this matter, we would sugsociety were voted to Dr. Greene.

on apple culture, which will be found on

our inside pages. S. P. Eby, esq., knew a gentleman in the northern part of this county, who had winter apples grown in his own orchard, that were as good as any grown in north-ern New York. Twice a year he washes his trees with lye from hard wood ashes, and cultivates and manures the ground around the trees. The orehard is an old one life and lies on a slope facing the northheast. Mr. Eby favored high lying grounds for orchards and believed in lib-

eralirrigation. John Resh had tried an experiment with his orchard which might be worth mentioning. The orchard was in grass ing of barnyard manure, and on top of the manure he had spread the earth which he which he was creeting. This was done to kill the sod and prevent it from appropriating to itself the fertilizing properties of the manure. He regarded the experiment

Calvin Cooper mentioned a case in his was effectually killed by being planted with tobacco.

What are the Relative Values of Whent, Bran and Corn for Feed? John C. Linville read the following paper in reply to a question referred at the last meeting.

semewhat on the object we wish to attain by feeding. Corn contains a large per- by the management of the college. centage of carbhydrates and a small amount of albuminoids. Wheat bran is Reist, Wm. New Large fourth or one-third bran and the remainder | Philadelphia on Wednesday. cornmeal. Thousands of cattle and hogs are fed in the West on corn alone. But these animals are unhoused and exposed Metzler, of Sporting Hill, this county. It Horses suffer from cold, and lose flesh to the inclemency of the weather. A large was large, juicy, well preserved and pleas-proportion of their food is burnt up in the ant to the taste, but not very highand fat rapidly if exposed too long and system to maintain the animal heat. In flavored. that case, perhaps, corn, with its large proportion of carbhydrates, is as good a feed as any.

An excellent daily allowance for a mileh

cow in winter consists of four quarts of cornmeal and four quarts of brau, with a

valuable concentrated feed for young stock and milch cows. Every one knows the great value of oats for horse-feed. This is due in a great measure to the large amount of nitrogen they contain.

A principal object in feeding grain and other concentrated feed is to increase the value of our manure piles. According to a table prepared by Dr. J. B. Lawes, of Rothamstead, England, it would seem that the manure from one ton of wheat bran is worth more than that from two tons of corn meal; that the manure from one ton the owner. The thills are too close and of linseed-cake is worth that from three rub or the harness is too tight and unyield- tons of corn meal, and the manure from ing. Always watch the condition of the one ton of decorticated cottonseed-cake is skin, and if you see the hair wearing off worth more than that from four tons of cornmeal. Dr. Lawes estimates the value put some softer and more pliable material of a ton of decorticated cottonseed-cake as manure, after being fed to animals, at

Manure is valuable in proportion to the nitrogen, phosphoric acid and potash it contains. From 85 to 95 per cent. of these valuable fertilizers are voided in the excrements of the animals and with proper care may be utilized. A large amount of the carbonaceous matter is burnt up in the animal and lost, but it is of little or no Dr. Greene, Johnson Miller and Wm. H.

Brosius spoke in commendation of the views of the essayist.

Fallen Apples. "Should fallen apples be allowed to remain on the ground?" was a question referred to Calvin Cooper for answer. He answered, "No; many of them contain insects or the eggs of insects; they should be gathered and burned and thus the insects will be destroyed; or they may be fed to the pigs, as even imperfect or partly rotten apples contain some nutri-

Cultivation of Corn. On motion of Casper Hiller "the cultivation of corn" was chosen for discussion at next meeting and Mr. Hiller was appointed to open the discussion.

The Agricultural College.

President Witmer stated that he had received a letter from Thomas M. Harvey inviting him and as many others as could make it convenient, to attend a meeting of agriculturists to be held in the club room at the Farmers' market, Philadelphia, to consider what is best to be done in regard to the palpable failure of the Pennsylvania College of Agriculture to meet the wants for which it was organized and endowed. The letter was accompanied by a report of a committee of the Eastern Experimental Farm club on the Pennsylvania State college and its relation to the experimental farms.

Report of Committee

Your committee respectfully report that referred to them, and desire to say: Tha the Pennsylvania State college is now and has been for several years in receipt of an est of the sum accruing from the sale of these lands was placed by our Legislature, under certain conditions, to the use of this college. One of the conditions especially affecting us as farmers was: that in consideration of the receipt of this annual income the college should agree to "establish, conduct and maintain three experimental farms"-which condition the college accepted without reserve. But your committee are free to say, that having an intimate knowledge of the manner in which the Eastern farm was "conducted and maintained" by the college, that such maintenance was not in accordance with the terms or spirit of the legislative act above referred to.

When the experimental farms were first started, the intelligent farming community took a marked interest in them, the East ern farm being principally stocked and Dr. Greene asked whether it was not a equipped by citizens of Chester county. degrees below the freezing point.

Casper Hiller said they would not.

Many of them deposit their eggs under the bark of trees and their larva in coccons ex
institutions are a disgrace to the commonwealth. But your committee fully believe imental stations," properly conducted and maintained, can be made of great value to agriculturists and to the people generhorse. On his motion the thanks of the gest that you petition the Legislature to society were voted to Dr. Greene. Casper Hiller read an instructive essay to, and secure it by setting aside one-third part of this income for the conduct and maintainance of such farms or stations; and further, as the college has shown such incompetancy in the management of such stations, that the portion so set aside shall be under the control and direction of the State Board of Agriculture with such restrictions and regulations as the Legislature in its wisdom may see fit.

Your committe are willing to go still further, and say that inasmuch as the college trustees have so injuriously changed the character of the college from its original design as the "Farmers' High school," as devised by Dr. Elwyn and other emient men, and inasmuch as unfortunate location and previous bad management have always made it unpopular, and with and upon this he had spread a liberat coat | no probable hope for future usefulness or popularity; and inasmuch as large sums have been spent upon this institution withdug from the cellar of a new building out any adequate return, therefore, we which he was creeting. This was done to mend the Legislature to substitute some better managed or more popular institu-tion as the recipient of this land grant fund, by endowing a professorship of agriculture and the mechanic arts; or in neighborhood in which a valuable orchard such manner as the Legislature may deem best. · All of which we respectfully submit Jno. I. Carter, Job H. Jackson, Thos.

M. Harvey, Benj. W. Swayne, Sylvester D. Linvill, Milton Conrad.
