TUESDAY EVENING, MARCH 8, 1881.

READING SIGNS IN THE SKY. THE WAY FOR EVERY MAN TO BE HIS OWN WEATHER PROPHET.

Clouds that Foretell Storms and Other Promise Fair Weather—Sattles that are Fought by Misty Squadrous in the Sky.

New York Sun. "It's easy enough to be a weather prophet. All you've got to do is to keep your eye on the sky, and it will be a very sly storm indeed that steals a march on

The speaker was a gentleman living on Columbia Heights, Brooklyn, who has done a good deal of sky gazing, but who says he has no desire for public reputation as a weather-wise man.

Look out of this south window. Do you notice those long, narrow misty-looking clouds in parallel rows that seem to be advancing upward from behind Staten Island with the precision and steadiness of a line of battle? They are the advance guard of an approaching storm. The barometer has not given the slightest sign, and it probably will not until that skirmish line has reached the zenith, which may take hours, and yet I am as certain that a storm is coming as though I saw the rain

"Do you mean that you can foretell a storm by the clouds sooner than by a barometer?"

"Anybody can. These winter storms, especially, announce their approach sometimes two or three days in advance. Whenever you see those parallel stripes of cloud rising in the southwest and moving in ranks slowly across the sky, you may be sure that wet or snowy weather is at hand. Why should not the clouds foretell the weather? There cannot be a storm or any considerable change of weather without clouds, and there is almost as much difference perceptible in clouds as in faces, if people would but notice them closely. "Do clouds always foretell storms?"

"No, some clouds give assurance of fair weather. A very little practice will en able anybody to read this language of the clouds. It is more like studying a language than you would suppose. You know in Latin a change in the termination of a word changes its meaning. Just so a change in the form of clouds changes their meaning. It is no mere chance work, but a certain change always means the same thing. If 'cirri' turn into 'cirro-strati,' every meteorologist knows what that means just as well as the boy at the head of the Latin class knows the difference between 'Hie' and 'Hujas.'" "Then the clouds are not all of one

kind ?" "By no means. About eighty years ago Luke Howard, an Engrish Quaker, whose business required him to take long walks in the open air, completed a classification of clouds that has ever since been in general use. One of the most wonderfui phenomena ever witnessed in the sky led Howard to study the clouds. This was the great dry fog of 1783, that overspread the whole of Europe and part of Asia and America, reaching to the summits of the Alps and lasting from one to pouring rain hides the landscape. of the world was thought to be at hand.

"Howard noticed that there were three principal kinds of clouds, which he called cirrus, cumulus and stratus. Anybody can see the difference between these clouds at a glance. The cirrus is the highest of all clouds. You must have often seen it in the form of white filaments, sometimes called 'mare's tails' and 'cat's tails.' Stretched across the blue sky like delicate lace work, it is very beautiful. Travelers say that on the summit of lofty mountain peaks, from which they could look down upon the heavier clouds, they have seen these wispy cirri floating overhead apparently as far away as when seen from the earth. In calm summer evenings long after sundown, these clouds may be seem reflecting the most delicate tints of color from the last rays of sunlight that illuminate the higher regions of the atmos-

"The cirri are composed of little crystals of ice. These clouds and their deri vatives cause the halos that are sometimes seen about the sun and moon. It was probably cirro-strati that caused the great display of moon dogs and circles the other day at Denver. Cirrus clouds indicate both storms and clear weather, according to their appearance. If they appear in their most delicate forms after stormy weather, they are a sign that a period of settled weather is at hand. When they show themselves in parallel streaks after fair weather has lasted for some time, they are the first indication of approaching change. Cirri, when greatly tangled and knotted, show stormy weather close at band. If their borders grow faint and indistinct, there is rain coming.

"Cumulus clouds are characteristic of summer. The farmers call them thunder heads when they poke their smooth, white rounded summits, glittering in the sun like silver, above the horizon. In that form they are the forerunners of local thunder storms. These mountainouslooking clouds sometimes actually exceed the greatest peaks of the Andes or Himalayas in size. When cumulus clouds disappear in a warm, pleasant day, not very large, distinct though soft in outline, and resembling cotton balls, they indicate continued fair day weather. On the other

hand, when they grow larger, darker and more formidable looking they foretell storms. Just before a rain they sometimes seem to throw off little fleecy clouds around their edges. Goethe, the great German poet, who was fond of studying the clouds, said that as long as cumuli have sharply defined borders and a white color a continuance of good weather may be expected. Cumulus clouds often form soon after sunrise and temper the heat of a midsummer day. If they gradually disappear toward evening the weather will remain serene, but if as the sun goes down they grow darker and more numerous, then look out for rain. The cumuli are the capitals, or condensed summits of invisible columns of vapor rising from the earth. They do not attain nearly so great a height as the cirri. Cumuli are generally from half a mile to two miles high. Cirri vary in height from two or three miles to six or eight.

"The stratus is most common at night and in winter. Those long ranks of clouds that I pointed out to you in the southwest and which show a coming northeast storm, are a variety of stratus. They always appear in the form of stripes or broad, low curtains, covering more or less of the sky. The night stratus is formed of mists from swamps, rivers, and moist ground. It generally rises and changes into small cumuli on summer mornings. The other kind of stratus, appearing at considerable heights in the fall, winter. and early spring, is, as I have said, an invariable forerunner of stormy weather.

"These three kinds of clouds do not al ways appear in their simple forms. They are frequently mingled together, and four varieties of these derivative clouds have been distinguished. The cirro-cumulus consists of little roundish white clouds, floating at a high elevation, and often resembling a flock of sheep resting upon the blue background of the sky. In winter these clouds frequently appear before a thaw. Between summer showers they accompany increased heat. They are com-

mon in dry weather. "The cirro-stratus commonly appears in

stormy weather. When it settles down into a thin veil, covering the sky, and making the sun and moon look dim, it is certain to be followed by snow or rain. You will see it in that form following those streaks that are now rising in the southwest and covering the sky before the storm comes.

"Did you ever see a battle in the clouds? The cirro-cumuli and cirro-strati are natural enemies. The first named is a fair weather and the last a foul-weather cloud. When they meet, as they some times do after a summer storm has partial ly cleared, there is war in the sky. The cloudy squadrons encounter in mid-heaven to settle the question whether sunshine or storm shall prevail. If the cirro-cumuli succeed, the weather will clear; if the cirro-strati are victorious, there will be more foul weather. It is a war of destruction, and the battle usually ends by the total disappearance of one or the other of the two kinds of cloud, all assuming the

form of the successful party. "Cumulo-stratus is the grandest of all clouds, and so it is the appropriate forerunner of great storms. If you ever hap-pened to go up the Hudson when a thun-der storm was gathering in the Catskills you must have seen this cloud dropping on the mountain tops and hiding the great peaks like a vast curtain. Whenever you see these clouds looming up, you may be sure that a violent change in the atmos-phere is close at hand. The cumulostratus consists of a layer or foundation of dark-colored stratus cloud nearest the earth, surmounted by bulky piles of very dense cumulus, not white and smooth like the fair weather cumulus, but rough, dark

and threatening, "One of the grandest sights in the world is the majestic march of the cumulo stratus clouds across a hilly country district in advance of a violent stoom. Animals, as well as men, are intimidated by the fearful appearance of the heavens, and show their fear by trembling and hurrying to places of shelter. These clouds commonly make their appearance first in the northwest, rising black and threatening above the horizon. Soon the rumbling of heavy thunder is heard, and as the clouds approach the zenith, blotting out the sun. fitful gusts of wind arise, followed by periods of oppressive calm. Sometimes a whirling motion is seen in the clouds. Then look out! If a black funnel seems to drop from the cloud to the earth, it is a tornado, and nobody can tell what damage it may do. The cumulo-strati fortell a storm several hours in advance. The longer they linger near the horizon the more violent the storm is apt to be.

"The last class, or rather sub-class, of clouds is the nimbus or black rain cloud, which spreads over the heavens just as the storm begins. It is made up of a mixture of all the other kinds, and appears in every storm, but is seen in its most characteristic form in a thunder storm. Sometimes it approaches within a few hundred feet of the earth, and at other times it is 2,000 or 3,000 feet high. While it always appears black or gray from beneath, it is, in fact, surmounted by a snowy white cap of cirrus or cumulus. I have sometimes, in the hills of central New York, seen from an elevated station the passage of a storm through a distant valley. The glittering upper surface of the clouds then presents a beautiful appearance, while underneath they are dark and forbidding, and the

"On account of the mixing together of three months, according to the locality.

"On account of the mixing together of the greatest terror prevailed, and the end the various classes of clouds; it is sometimes difficult to accurately distinguish them apart. A little, practice, however, will enable any observant person to detect the prevailing characteristics. Indications vary slightly for different localities, and some knowledge of local peculiarities is therefore necessary. Any one who watches the clouds can form many weather rules for himself that he will find at least as trustworthy as the predictions of Old Probabilities,"

> Troublesome Children that are always wetting their beds ought no to be scoided and punished for what they cannot help. They need a medicine having a tonic effect on the kidneys and the urinary organs. Such a medicine is Kidney-Wort. It has specific action. Do not fail to get it for them.—Exchange.

We Believe That if everyone would use Hop Bitters freely there would be much less sickness and misery in the world; and people are fast finding this 0.1, whole families keeping well at a trifling cost by its use. We advise all to try it.—U. & A. Rochester, N. Y. m2-2wd&w

MEDICAL.

HOSTETTER'S CELEBRATED

Invalids who have lost but are recovering vital stamina, declare in grateful terms their appreciation of the merits as a tonic of Hostetter's Stomach Bitters. Not only does it impart strength to the weak, it corrects an irregular acid state of the stomach, makes the bowels act at proper intervals, gives ease to those who suffer from rheumatic and kidney troubles, and conquers as well as prevents fever and ague. ague.
