EDUCATIONAL.

MEETING OF THE SCHOOL BOARD.

Levy of School Tax—Report of Book Committee—Sale of Property Authorized—City Superintendent's Monthly Report, &c.

A stated meeting of the board of directors of Lancaster city school district was held last evening, the following members being present: Breunen Brosius, 'Byrne, Carpenter, Cochran, Eberman, Erisman, Evans, Haas, Hartman, Jackson, Johnston, Levergood, Marshall, McConomy, Morton, Oblander, Reimsnyder, Rhoads, Ringwalt, Richard Sanson, Schrebel, Slaymaker, Smeych, A. J. Snyder, E. G. Snyder, Spurrier, Warfel, Westhafer, Wilson, Christian Zecher.

President Baker being absent Mr. Warfel was called to the chair. The minutes of last meeting were read and approved.

Mr. Evans from the finance committee, presented the following bills, which having been examined and approved by the committee, were ordered to be paid: C. H. Barr, books and stationery, \$14.84; Wm. Wolschen, tree boxes, \$127; C. Cooper, shade and ornamental trees, \$105.50; Allen A. Herr, principal city regulator, for regulating lot for Manor street school building, \$4; J. F. Lewis & Co., merchandises, \$2.87; F. Lewis Noll, brooms, \$3.25; Coho & Wiley, coal, \$88.

Mr. Evans also presented the following resolution, which was adopted: Resolved, That for the year commencing with the 1st day of June, 1882, the rate of taxation for school purposes, in the Lancaster city school district, shall be assessed three mills on the real and personal estate of the district, and on all other subjects of taxation, at the rate fixed by law; and that all persons who shall pay their taxes, on or before the first day of August in said year, an abatement of three per cent. shall be allowed, and after that date, until the first day of September following, the full amount will be required; and to all taxes remaining unpaid at that time five per cent. shall be added.

Committee Reports.

Mr. Brosius, from the book committee, presented the following report: To the president and directors of the Lancaster city school district: GENTLEMEN: In obedience to the requirements of section 16 of the rules of the board your committee on text books and course of instruction respectfully report:

That an examination of the course of instruction prescribed in the curriculum of the boys' and girls' high school has convinced your committee that some changes therein are demanded by the highest interest of the school; and they therefore suggest, with the consideration of the board, the following alterations: For the first year in the boys' high school, in the English course, omit Greek, Latin and natural philosophy, and introduce botany, book-keeping and drawing, composition to be had on a separate sheet. The mathematics of the first year to be limited to arithmetic and algebra.

For the second year, omit Greek, Latin, natural philosophy and physical geography, and introduce natural history, English literature, etymology and drawing. Composition to be a hereinafter provided. The mathematics of the second year to be limited to algebra and geometry.

For the third year, omit Greek, Latin, history and political science and introduce rhetoric, geology, chemistry and drawing. Mathematics of the third year to be limited to geometry and trigonometry.

For the fourth year, omit Greek, Latin, elocution and philosophy, and introduce a strong, more philosophical and physical geography, rhetoric and drawing. The classical course shall consist of the foregoing, with the following substitutions, to wit: In the second year, Latin for etymology, and Greek for geology.

In the third year, Latin for etymology, and Greek for geology.

In the fourth year, renew of mathematics for astronomy and moral philosophy, and Greek and Latin for rhetoric and drawing.

The modern course shall consist of the English course, with the following substitutions, to wit: In the second year German for English literature.

In the third year, German for geology. In the fourth year, German for rhetoric.

The drawing prescribed in the foregoing courses of study shall be geometrical and mechanical exclusively after the first year.

In the girls' high school, for the first year, omit etymology, natural philosophy and physical geography, and introduce drawing and botany. Composition and reading to be as hereinafter provided. The mathematics of the first year to be limited to arithmetic and algebra.

For the second year, omit natural philosophy and rhetoric and introduce English literature, natural history and etymology. Composition to be as hereinafter provided. The mathematics of the second year to be limited to algebra and geometry.

phly, Rhetoric, Physical Geography, Constitution U. S., Drawing.

Optional Studies—Second year: French, German, Latin. Third year: French, Latin, German. Fourth year: French, German, Latin.

To meet the requirements of the foregoing changes in the course of instruction, your committee recommend the adoption of the following text books, to wit: Hooker's Natural History, Ray's Astronomy, Dana's Geological Story, Hooker's Chemistry, Sheppard's First Book on the Constitution.

Your committee also recommend that the old edition of Well's Natural Philosophy be exchanged for the "New," provided it can be done without expense to the pupils. Respectfully submitted, MARIOTT BROSIOUS, W. A. WILSON, J. M. JOHNSON.

Mr. Hartman, from the property committee, reported that for the contract for the erection of the new school building on Manor street had been awarded to Wm. W. Wolschen, for \$7,515, and that the work was being pushed forward by the contractor.

Mr. Smeych, from the special committee on trees, reported that the committee had purchased a large number of trees and planted them in the school grounds.

The monthly report of the city superintendent was read as follows: LANCASTER, PA., MAY 4, 1882. To the Board of Controllers: GENTLEMEN: The city superintendent submits the following report of the public schools for the month of April: Number of pupils enrolled, 4,006; average attendance, 3,475; average per centage, 84. The number of visits made by directors was 56, as follows: J. W. Jackson, 3; D. Smeych, 1; Luther Richards, 16; H. R. Breunen, 3; Rev. C. Reimsnyder, 3; Dr. H. Carpenter, 1; J. M. Johnston, 14; P. McConomy, 1; J. M. Johnston, 1; J. W. Byrne, 7. The city superintendent made 108 visits to the schools.

Your attention is called to the fact that the course of study for the high schools, as printed in the book of rules, has not been adhered to, no doubt, because it was found impracticable to do so; but as we are now drawing near to the close of the present term, and as it is made my duty to see to it that the rules and regulations of the board are observed, I would suggest that the changes necessary in the course of study for these schools be made before the opening of the next school term.

Under our rule all notes of admission to the public schools ought to be given by directors. It often happens, however, that parents, thinking the superintendent the proper person, apply to him; and not unfrequently directors send applicants to him for examination in order to ascertain to what grade and school they should be sent. Under these circumstances I would suggest the adoption of a rule authorizing him to give notes of admission to all pupils applying to him and entitled to receive them. This will not in any manner interfere with the giving of notes by directors when applied to, but will simply enable the superintendent to do the same without violating the rules.

A rule authorizing him in cases of difficulty between teachers and pupils, to transfer pupils from one school to another of equal grade, would give the proper sanction to the practice which has prevailed more or less for the last two years, and would often prevent more serious troubles.

It affords me great pleasure to report that Andrew's Lunar-Tellurian, recently purchased, is an excellent instrument. It has been in daily use, as will be seen by the following circular sent to the principals of the secondary schools: The city superintendent will give lessons on the globe to the pupils of the A. class, secondary schools, as follows: Monday, 8 a. m., Miss Huber's; 5 p. m., Miss Carpenter's. Tuesday, 8 a. m., Miss Bundel's; 5 p. m., Miss Erbacher's. Wednesday, 8 a. m., Mr. Levergood's; 5 p. m., Mr. Gates. Thursday, 8 a. m., Mr. Matz's; 5 p. m., Mr. Lichty's. Friday, Miss Powers'. Very respect fully, your obedient servant, R. K. BUEHLER.

That part of the city superintendent's report of last month, relative to the organization of a city teachers' institute, was taken up, and after being discussed briefly by Mr. Warfel, who left the chair for the purpose, was on his motion indefinitely postponed.

Violating the Rules.

Mr. Byrne called attention to the fact that in violation of the rules of the board some of the teachers had closed their schools during the street parade of Forepaugh's circus, and that some children whose parents supposed them to be in school, were trampled upon and hurt in the crowd. He did not object to the children seeing such street parades, but he thought if the schools were to be dismissed on such occasions, the dismissal should be by order of the board and then parents would know their children were not in school, and would take proper measures to keep them out of harm's way.

Dr. Levergood said to teachers who closed their schools ought to be named. Mr. Slaymaker named the High school and the Rockland street school as being closed on that day, and suggested that a reduction be made in the teachers' salaries for that day.

Mr. McConomy thought the board ought not to be too hard on the teachers and pupils who wanted to see the show, as some venerable directors had also taken occasion to see it—some of them at very considerable cost, (referring to Dr. Levergood, whose gold watch was stolen at the circus).

Spoke upon the subject, showing that pupils were absent with the consent of parents; that in some of the schools not a half dozen pupils were present, and that the subject was not of sufficient importance to make a fuss about. The matter then dropped.

Mr. Hartman called attention to the fact that the North Mulberry street school property is now unoccupied and unproductive. It is not likely that its board or any other one will ever build school houses upon it, as the board owns larger and better lots in the immediate vicinity. He moved that the property committee be authorized to advertise the property for sale and sell it if a proper price be offered.

Dr. Carpenter opposed and Mr. Smeych favored Mr. Hartman's proposition, which was finally agreed to by a vote of the board.

Schools to be Closed.

Mr. Breunen called attention to the fact that Whit Monday came on the 29th and Decoration Day on the 30th of May, and as they were both holidays he moved that the schools be closed during those two days. The motion was agreed to.

Mr. Brosius inquired of the clerk what rule he had in view when he decided that the report of the book committee must lie over.

After an interchange of opinion by several members it was decided that the report should not lie over as an amendment to the rule, but should be taken up for action at next meeting.

Amending the Rules.

In consequence with the suggestion of the city superintendent in his report, Mr. Cochran moved to amend the rules so as to give the city superintendent, as well as directors, authority to give permits to pupils to enter the schools, and also authority to transfer pupils from one school to another, when the interests of the school seem to require it. The amendments lie over, under the rules for future action.

Adjourning.

TOBACCO GROWING.

Manures and their Application.

"G. A. R." in Country Gentlemen.

As has been stated in a previous article, the farmers of Lancaster county have learned to prize manure and to practice economy in making and saving it. Large quantities are now shipped from Philadelphia, which, with the large home supply consequent on the customary system of stock keeping, provides fertilizers sufficient for the wants of the tobacco fields. Commercial fertilizers are used only in moderate quantities, and the tobacco growers have learned from experience that nothing has yet been found so suitable for fertilizing tobacco land as barnyard or stable manure. Horse manure is unquestionably the best, but cow manure if well rolled and used in sufficient quantities answers the purposes well.

It may be asked, what the objections are to commercial manures. I answer, mainly from my own experience in using them for tobacco in the Chemung valley, that they are not well adapted to the requirements of the plant in all soils. There are certain kinds of soil upon which a good brand of fertilizer would doubtless produce good results, and might be used with profit to a grower. I have found them of little value in heavy clay or gravelly loams, such as are commonly used for tobacco in this valley and in Lancaster county. Barnyard manure has other desirable effects upon heavy soils besides furnishing the elements of fertility. It has a chemical action, and when used in fairly large quantities renders the soil "lively"—loose and friable, making it more easily cultivated and better adapted to the wants of the tobacco plant. The same effects are produced by the use of the manure, which is in fact the results of many of the Lancaster growers exercise almost unnecessary care in manuring their tobacco fields or patches. It is common to see fields which have been planted in harrowed and worked as if prepared for corn, with small even-sized heaps of manure placed in the alternate rows—seven or fourteen feet apart each way. The object of this is that the manure would be spread evenly, which is indeed an important point. I have found that by harrowing land after having spread the manure as evenly as possible, the same result is secured and the manure pulverized and evenly distributed.

Plowing and Ridging.

As the tobacco plant is a rapid grower, and matures its crop in a short period of time, too much attention can hardly be given to fitting the soil. The more the soil can be turned and stirred, the more thoroughly will it be pulverized and the more fully the manure incorporated through it. If the soil is stubble land it is usually plowed in the fall, and again in the spring as early as its condition will allow, and again still later, or shortly before planting time. If a timely soil is to be planted with tobacco, I should prefer to plow it early in the spring so that it may be partly rotted by the time the plants are set out. In this case a thorough cultivation and harrowing should be given preparatory to marking and ridging for the plants. Clover ground usually leaves the soil in excellent condition when turned down, and may be left until late in May before being plowed, which will give it time to make considerable growth of top, which will prove advantageous to the soil and to the tobacco. In all cases, whatever the nature or condition of the soil, it should be reduced to fineness on the surface by use of the harrow and roller. Next in order is to work off the patch into rows by three or one-half or four feet apart, with a corn marker. Tobacco in Lancaster county is usually planted in rows four feet apart and are about two feet apart in the row. I think this the best distance for setting the plants on strong soil, and where the large growing seed is used, and are grown. With Havana seed, the rows should not be more than three or three and a half feet apart at most, and the plants may be set nearer together in the rows.

When the rows are marked out they are passed over with a cultivator with the shares adjusted so as to throw the earth into a ridge directly over the marks. These ridges are then rolled down with a light roller having cleats nailed on at the proper distance apart to form marks in which the plants are to be set. In small patches the

hills or "spats" may be made with a hoe. I have in use a ridger and roller combined, consisting of an Allen roller cultivator, to which is attached a single roller thirteen inches in diameter, with two small knobs fastened at equal distances upon the top surface. This makes an excellent implement for the work, and saves one passage over the field in the preparation. This size of roller in theory would make the marks for the plants about twenty inches apart, but an allowance must be made for the slipping of the roller as it passes over the soil, which makes my roller work very nearly two feet apart.
