### Lancaster Intelligencer.

WEDNESDAY FVENING JAN. 31, 1883,

MONSTER SNAKES. the Different Kinds Found

Tropical Regions. "I took that fellow with a lasso," said a naturalist, who recently returned from a collecting tour in South America, pointing to a magnificent snake skin more than twenty-two feet in length that hung from the wall of his study, "and in this wise," he continued, observing the look of incredulity upon his visitor's face. "I was way up the Amazon, and being anxious to get a large snake I offered a reward for one, and soon heard of a big fellow that had been seen about three miles from where I was. I immediately moved into the neighborhood, and after we had scoured the country several days the boy I had with me came running through the bush in great excitement, saying that a big boa and the saubas (auts) were having a fight. The saubas, by the way, are foraging ants that put to flight man and beast. When they enter a house the owner steps out and runs for his life, and when I came up to the snake I found it in a similar fix. It was a magnificent speci men. It had swallowed some exceedingly

large animal, and, while almost unable to

move, had been attacked by the auts. The

grass, bushes, twigs and leaves were black

two the great reptile would lift itself in the air and sway about savagely, but only to fall back again. I saw that the ants would destroy it in an hour, so I sent my boy back to the village to get a rope, and took to the trees myself. "In half an hour be returned with 20 men. I made a lasso, and, getting near the snake, succeeded in throwing it over his head, but I became fairly covered with auts so that I had to rush away and roll in the bush to rid myself of them. However, we all rallied, manned the rope, and managed to drag the snake out of his retreat and away from ants. It was so sluggish under this rough treatment that I was able to place my pistol within six

inches of its head when I shot i'. I soon

had it in camp and the skin taken off. I

wanted the skeleton also, but the natives

stole it in the night and my specimen

went for stews the next day. Boa meat is not bad, and is very generally eaten in many localities.

Very few people can be made to beheve that snakes attain the sizes mentioned by naturalists. Nevertheless, gigantie snakes do ex st. In Borneo, Mr. St. John measured snakes twenty-six feet | freely answered. in length. Mr. Bates, the naturalist, measured in South America many water boas that were twenty feet long, but the largest stake ever reported to have been seen by a Laropean of unquestioned veracity was that vouched for by the wellknewn botanist. Dr. Gardener. The monster had swallowed a horse, and had soon afterward been drowned by being swept down a river by an overflow, and when found after the settling of the water it was hanging in a tree. It presented a most remarkable spectacle, being forty feet long and distended to an enormous bulk. These screents are often called Temocratehailia, meaning 'fighting with ive men.' A skin of one formerly in the British museum is thirty five feet long. Andanson observed a snake in Senegal that was 50 feet in length and 2; in diameter, while Waterton tells us that a Spaniard showed him a skin at Argostara, the capital of Orinoco, that from its thick ness he judged to have been that of a serpent seventy feet long. Baldaens, the author, found scrpents in Ceylon thirty six feet in length, and in Java he saw one that had swallowed a stag entire. Owen, in his 'Natural History of Scrpents,' gives the length of one as tifty feet, and Father Gamilla, in his 'History of Orinoco,' refers to serpents forty feet long; so that it would seem fair to suppose that snakes do attain what might be called gigantic dimensions. On the Rio Branco the traders and natives report that snakes swallow full sized cattle, and this can be readily perceived. The horns, of course, are not swallowed. The snakes lie in a lethargic condition until they drop off. " A case came to my hearing" continued the naturalist, "of a curious accident occasioned by a snake that had swallowed a deer. A native pinching the body, and

cut it, when the monster writhed and

hurled its head at the man with so much

force that the projecting horns penetrated his lungs and killed him. Mr. McLeod,

who was the historian of the 'Voyage of

the Aleeste,' was captured and kept a

prisoner for many months at Whidah, or

the coast of Africa, and he states that he observed snakes nearly sixty feet in length. Tales of fabulous snakes are common in

history. Valerious Maximus, quoting Livy, refers to the alarm into which the

Roman army was thrown by an enormous

serpent that had its lair on the banks of

the Bagradus, near Utica. This snake,

according to Pliny, was 150 feet long.

Bontius refers to snakes in the Asiatic

Islands that exceed 36 feet in length, and

mentions that he has seen persons eating

the flesh of large hogs captured by and taken from snakes. "The great camoudi snakes of South America have a habit of hauging from trees over the water with portions of their bodies concealed, so that they would be easily taken for the great vines that grow so luxuriantly in these forests, and in this way they obtain much of their prey that comes unsuspiciously along, even human game not being neglected. Kingsley re lates an occurrence where four young women were bathing in a lagoon and one of them felt herself pulled from behind. At first she thought it a prank of one of her companions, but the form of an enormous snake soon appeared. It had fastened its teeth to her bathing dress but the others succeeded in frighting it off. When they are gorged with food they coil up closely and resemble a stump, and a case is known of a native having made the mistake of sitting down upon one with results astonishing to both seat and sitter. Waterton in referring to the camondi snakes says that specimens from thirty to forty feet long have been killed and that the Spaniards of Brazil positively affirm that in the unfrequented districts these serpents sometimes attain a length of seventy feet, and will destroy the largest and strongest bull. They call them mata toros which means literally 'bull killers.',

\*.\*"In choosing alles, look to their power as well as their will to aid you." In choosing a remedy for bowel, liver and kidney diseases, try Kidney-wort and you will never regret it If you are subject to ague, you must be sure to keep your liver, bowels and kidneys in good free condition. When so, you will be safe from all attacks.
