CLEAN FIELDS AND HEAVY CROPS.

Some Suggestions About Cultivation. Country Gentleman.

There are two drawbacks in the methods largely adopted by the farmers of this country in the cultivation of their crops during the first half of the season. These methods involve a needless expenditure of labor and permit an extensive growth of weeds. The surface of the soil is not broken or stirred often enough. A frequent pulverization would accomplish two very important uses, namely, the destruction of young weeds and an increased growth of the crops. We have shown on former occasions the importance of destroying weeds just as they are commencing growth, and even before they have reached the surface of the ground, when the minute and tender sprouts are broken by a ton of the pulverizing instrument. The experiment was tried a few years ago of passing the steel rake weekly over a given measured surface in the garden, and allowing alongside an equal acre to become covered with a growth of weeds from six inches to a foot high before killing them. A record was made by the watch of the time consumed by each method. During the two months of growth it was necessary to pass the steel rake eight times over the surface; but this was done so rapidly that only one half of the time and labor were consumed than were required to clear out once the tall weeds from the growing crop. The crop made one-half more growth by the first method, and the seeds of the weeds in the surface soil were thoroughly destroyed by the eight operations of the farmer, on whose rich fields about 50 bushels of corn per acre were obtained by ordinary management, assures us that by passing the cultivator once a week between the rows, until the corn was as high as the horse's back, he had increased the crop to between 60 and 70 bushels per acre.

Hostetter's Bitters is the specific you need. For sale by all Druggists and Dealers generally. my1-1mded&w
