YARD AND GARDEN.

Spring Notes of Timely Interest.

Tomatoes do not need rich ground.

Green peas occupy the ground about 70 days.

Sow redishes about ten days apart for a succession.

Trim the dead leaves and dry runners from strawberries when planting them.

Use the knife at once on the appearence of black knot on plum or cherry trees.

Rich ground, strong plants and good culture are the surest remedies against lice and worms infesting cabbage.

In planting raspberries and blackberries cut the present canes away entirely, or branches will start from them which will never fruit profitably, and will divert the nutriment that should go towards making strong new canes.

Extending the Season.—Some years the summer is none to long for Lima beans. A start of several week may be secured for them by planting the seed under glass, on inverted sods a foot square, transferring them to the garden when hot weather sets in.

Warfare Against the Insects.—In the orchard no quarters must be given to the enemy. The tent-caterpillar's presence is easily detected, as the dew on the nest in the morning shows them up conspicuously. Every sign of their existance should be destroyed, as can easily be done when they are small. Borers in the trunks near the ground must be probed or cut out. The curculio will begin its work at once, and must be met by shaking the trees and catching the insects on a cloth and killing them.

Flowers and the Lawn.

Crocuses attract honey bees.

Cover small seed very lightly.

Excessive wetness of the seed bed may induce rot.

Evergreens may be planted several weeks later than deciduous growths.

In slipping the cactus lay the cuttings in a dry place a day or two before placing in sand.

April and May are the best months to prune ornamental evergreens.

Camellias in pots suffer greatly from dryness of soil sometimes without its being detected, as the leaves never flag on such account. Be sure to soak the ball at every watering.

Angle worms in beds of earth, or the lawn, may be destroyed by freely sprinkling with lime water. Made as strong as possible it will not hurt the plants.

Sickly Pot Plants.—If there should happen to be some yellow leaved sickly looking plants in the collection, turn them from the pots, wash the soil from the roots carefully, and repot again into perfectly clean porous pots, a size smaller than those they stood in, using light earth. Trim back the top a little at the same time, and with common care they will soon commence picking up if there is any good in them.

Box Edging.—If this presents a bare and straggling appearance, it should be divided and reset. The old plants ought to make plenty of cuttings, which should be six or eight inches long each. A trench may be opened by thrusting the spade into the ground, with its back against a line that has been set to show the course of the new edging. In the trench the cuttings should be placed against the side towards the line and so closely together that the foliage will form a continuous line. Pack in the earth firmly, and water freely for two or three weeks.

OF GREAT VALUE TO VOCALISTS.

UNIONVILLE, Westchester Co., N. Y., August 20, 1883.

I had carelessly exposed myself and sustained a very severe and tight cold on my chest and in my throat. I procured Allcock's Porous Plaster and applied one on the chest, well up on the throat and relief came readily; the soreness of my chest was removed, and my vocal organs were kept clear the entire past winter, enabling me to fulfill public engagements in different parts of this country. No more may be said than that Allcock's Porous Plasters, if applied by afflicted vocalists, will greatly assist their vocal rendition in public. B. FRANKLIN CHURCH.

MACHINERY.

HAVING DISSOLVED PARTNERSHIP and permanently closed the Chestnut Street Iron Works, I desire to inform my old patrons and the public generally, that I am still in the business, being located in the Penn Iron Company's Works, North Plum street, where I am making Iron and Brass Castings of every description, and will be pleased to serve all who may favor me with their patronage. From 40 years experience in the business and using the best material and employing the best mechanics, I am satisfied I can guarantee entire satisfaction. Castings made from a mixture of iron and steel which are more reliable for strength and durability than the best cast iron known. V teeth roll pinions, rolls and rolling mill work a specialty. Castings made of very soft iron, and brass castings of every description. I have all the patterns of the well and favorably known Mowrer Corn and Cob Crusher, refitted and improved. Also on hand, mills completely fitted up or in parts, to replace old ones which have been in use for years, guaranteeing them to give satisfaction.
