CHAMBERSBURG, April 28, 1849.

MR. HENRY E. LEMAN :- Your favor of the 25th inst., is at hand, and in reply say that the Grind-stones we run with Wortz's wheel are from 5 to 6 feet high, 9 to 12 inches thick, weighing from 3 to 5000 lbs. We formerly used an undershot wheel 12 feet wide and 14 feet high. Our head in an ordinary stage of the water is about 3 feet, 3 or 4 inches. Sometimes much less than that. With the old wheel we run two grindstones. In the same place we have now four of Wortz's wheele (3 36 place we have now four of Wortz's wheels (3.36 and 1 40 inches,) running four grindstones and one trip hammer weighing about 80 lbs. with less water and doing more work in the same time. In regard to the quality of the wheel for the purpose of grinding, it is far superior to any I have ever used or seen used, and for a low head I believe it is the heat wheel in user-during the wheel with curve, which or seen used, and for a low head I believe it is the best wheel in use-during the whole winter (which has been unusually cold) we have not been affected at all with the ice, and in high water at a stage which would stop the old wheel entirely, we now find no inconvenience from back water. Any fur-ther information on the subject I will be happy to communicate, or it you could make it convenient

to visit Chambersburg I will take great pleasure in showing you the wheels. Respectfully, yours, THOS. CARLILE.
