The Paint differs from the so-called Mineral Paints of the day, which are principally Ochres and Clays colored, and are entirely worthless.

Silver's Plastic Paints are purely Metalic, containing no Alumin or Clay.

They are levigated finely, mix readily with Linseed Oil, (without the trouble of grinding.) and flow under the brush as freely as the best White Lead.

These Paints excel all others in body, or cover-

in sees raints excel an others in body or covering properties, one pound of which will cover as much surface, as two pounds of White Lead.

There are four natural colors, viz. Black or Slate, Blown, Olive and Chocolate.

Directions.—This Paint flows readily under the brush and its covering property is increased by using it mixed as thickly as possible with pure Lin-

using it mixed as thicky as possible with pure Lin-seed Oil; as the Paint is the lasting or protecting body and the Oil simply the medium or agent in spreading it.

Dear Sir: You ask me for my opinion of "Silver's Mineral Paints," which you have put on my Machine Shop and Planing Mill. I give you with pleasure my full and hearty recommendation of it tive of Fire communicating from Chimeys, or from adjoining buildings. The Paint which you put on my roofs, has now besome as hard as slate, and I feel as secure from Fire, in this direction, as is possible. A few weeks after the roofs had been painted, I made an experiment on two or three shingles by placing them in the furnace under the boilers; the result was, that the portion uncovered was entirly consumed, while the painted par was apparently sound, though upon examination the wood was found to be charred; the Paint however was firm and but little blistered. I consider this as severe a test as your Paint can be put to, and under the circumstances I do not hesitate to commend it as an invaluable preventive against Fire. Respectfully, &c.
