A great saving in Seed. as less is required with this Drill, than any other now in use. This Drill has been in use for three years, and wherever introduced, has won a reputation equiled by none. It has taken between Thirty and Forty First Class Premiums in 1858, at the various State and County Fairs, where it was in competition with other Drills. Among which are Indiana, Ohio. Pennsyl-vania, Now Jersey, Maryland, and Virginia State Fairs; also the HUDLY Fair Class Premium in the state Fairs; also the HUDLY Fair Class of the data Richmond, Virginia, and many County Fairs. The following are some of it advantages: First. The tedth are so constructed with Rubber Springs, that when they come in contact with roots, rocks, stumps or any other obstructions, not over eighteen Inches high, they spring back, pass over, and immediately reguin their former position, without stoppage or injury to the Drill, avoiding the necessity of stopping to put in Wooden Pins, is the case in other Drills. Newly cleared land can be seeded with this Drill as well as an old field. So perfect is the spring, that the Drill can be drawn across a railroad track without damage to the Machine. The spring can be set to drill the hardest kind of ground without yield-ing, but will suddenly yield where it meets s firm obstruc-tion. Second. The arrangement of distributing the seed is

tion. Second. The arrangement of distributing the seed is Second. The arrangement of distributing the seed is composed of two Vulcanized Fulber Rollers, revolving together, which discharge the seed not intermittingly or in bunches, but in a constant stream, without CBOCXINO or BRAANNG the grain. No irregularity of ground or fast or slow motion of the team will vary the quantity sown to the arcc. The quantity sown to the acre is regulated by a slide, to any desired amount in a moment's time, even while the Drill is in motion. It cannot be choked by straws, or white caps being in the Wheat, as the rollers will carry it through.
