

Evening ILLUSTRATED Ledger

TUESDAY
May 18, 1915

THE CAMERA MAKES CLEARER THE NEWS OF THE DAY FROM HOME AND OTHER LANDS

"THE PARLIAMENT OF MAN" IN ACTION

A picture taken from above of the "curbstone cabinet" which is deciding the fate of nations in front of the Ledger bulletin board. As each piece of news is announced the discussion embraces it. The debaters are often surprisingly well informed in matters political and military.

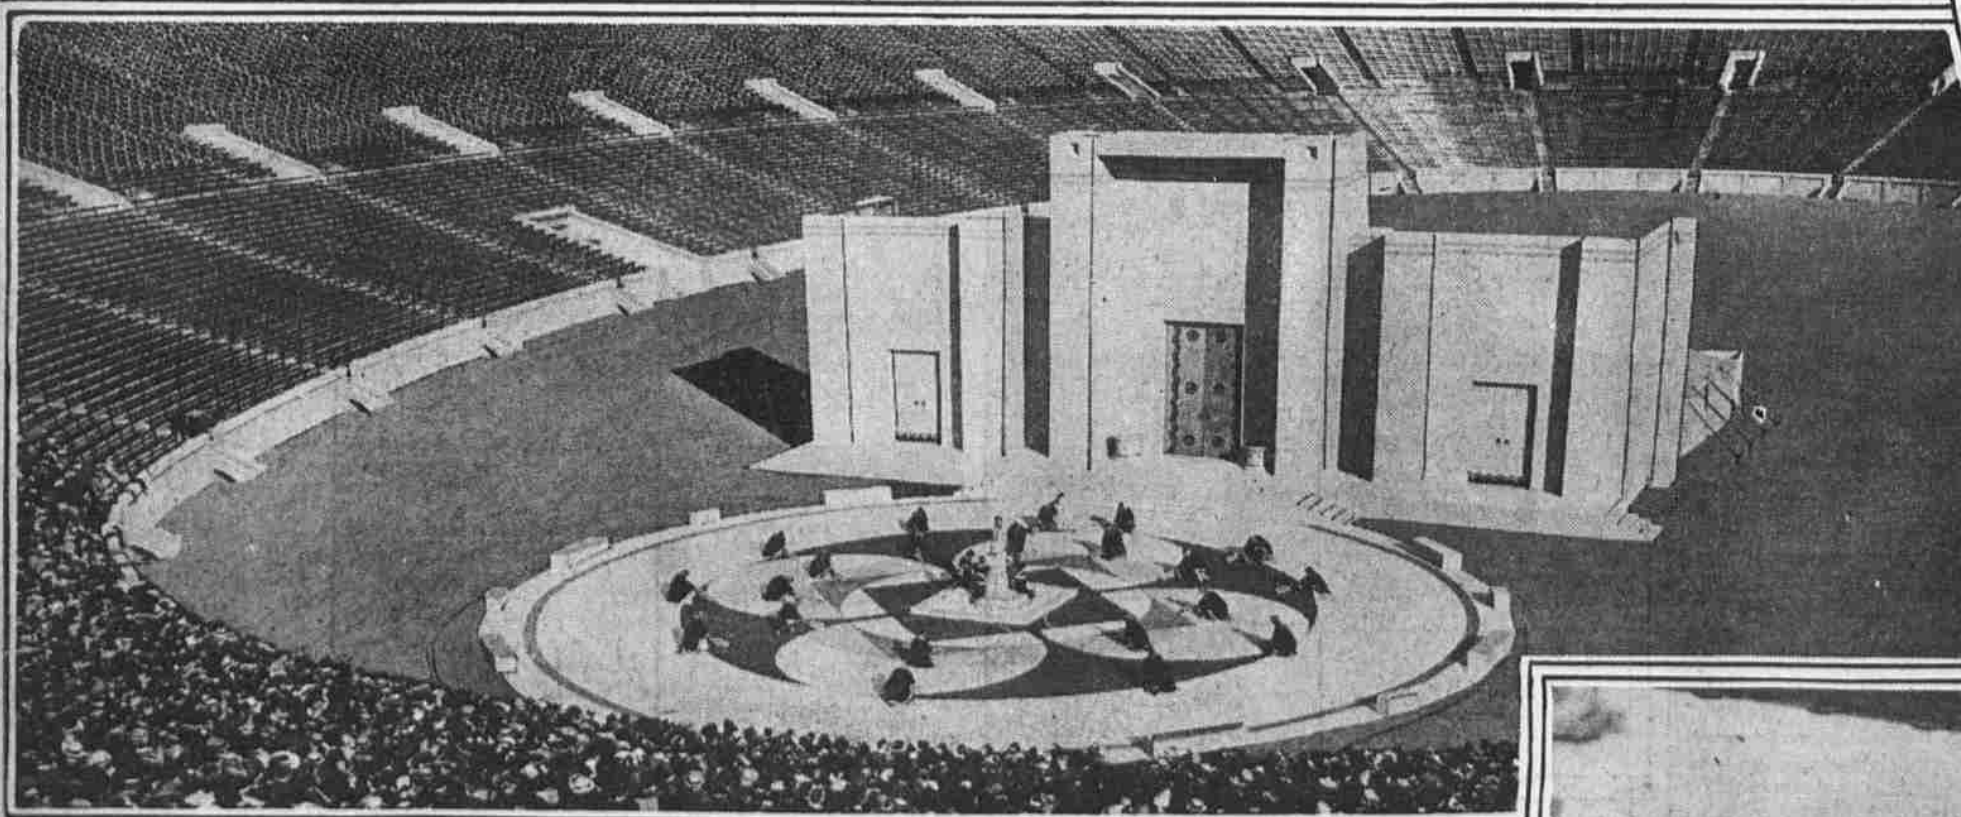

A COIGN OF VANTAGE FOR THE TRAFFIC COP
The policeman shown in this picture is patentee of the comfortable stand he is occupying. He is also proprietor of a hotel in Newport, R. I., where this snapshot was made. The platform prevents wet feet in stormy weather.

PREPARED FOR GAS BOMBS

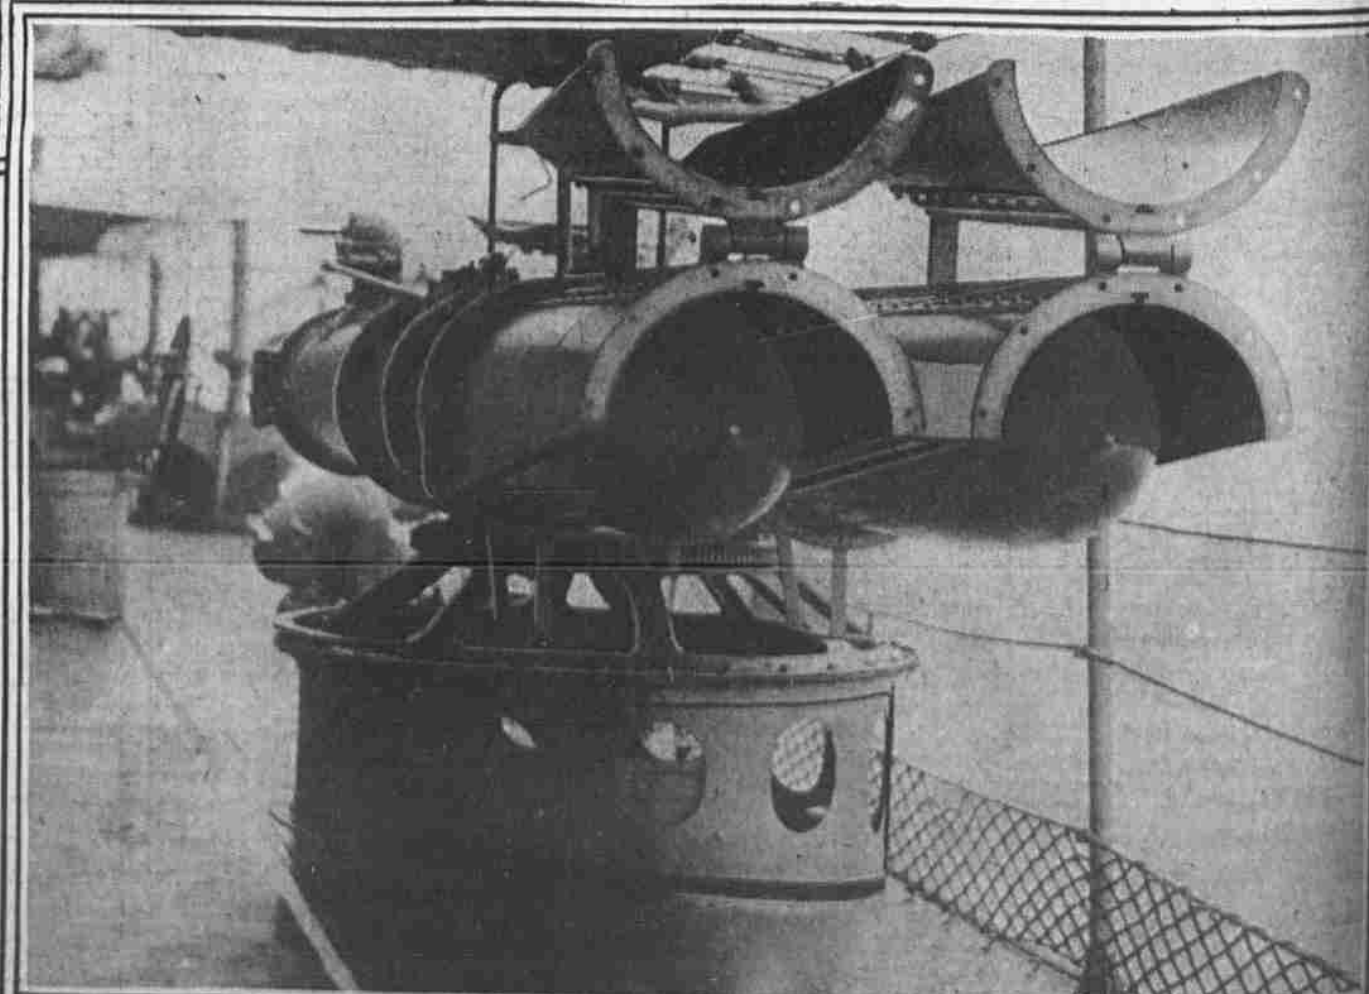

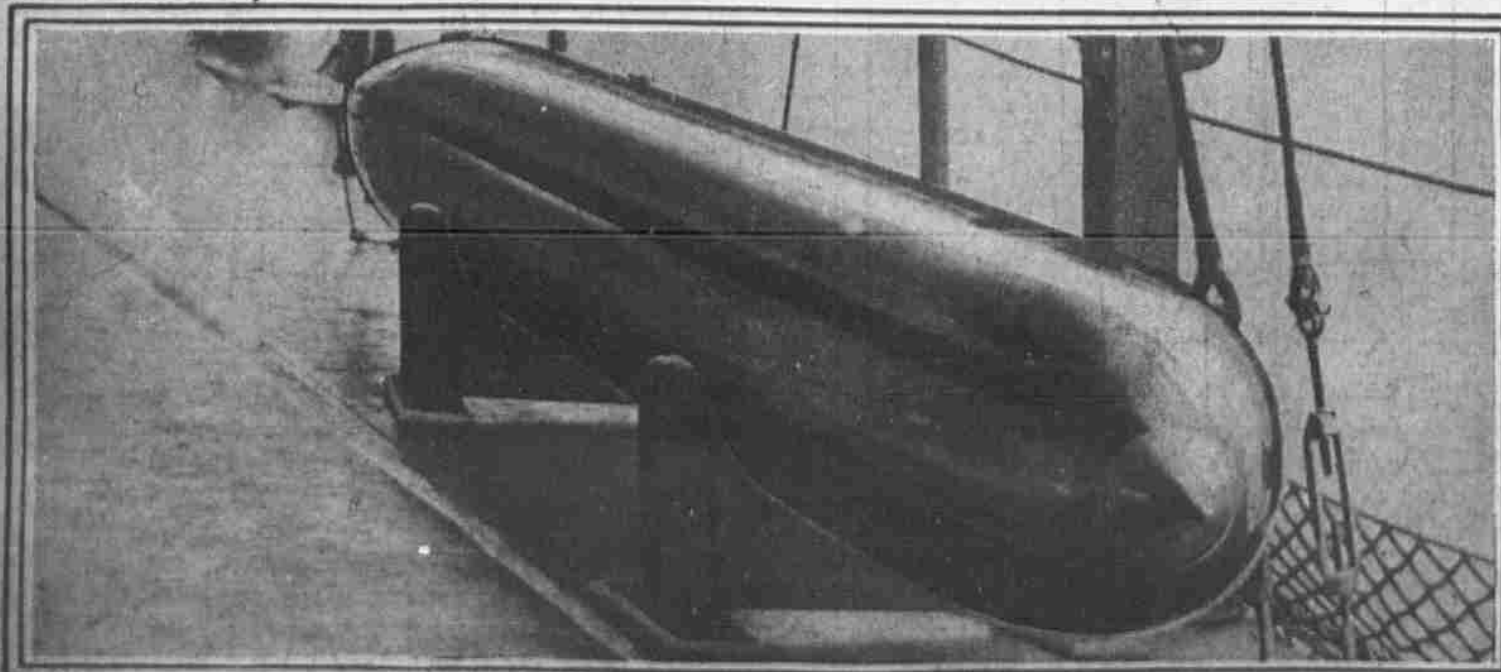

The pad of cotton wool has been so treated that it prevents the inhalation of asphyxiating gases which the Germans are using to overcome the British in Flanders.

A GREEK PLAY IN A MODERN STADIUM

Photo by Underwood & Underwood

Granville Barker and his company of players gave Euripides' "Iphigenia in Tauris" at New Haven Saturday. This picture shows the full stage in the middle of the Yale bowl, and the crowd in the foreground. The same play will be presented by the University of Pennsylvania within a short time. The site will be in the Botanical Gardens.

TORPEDOES AND TORPEDO TUBES AS MOUNTED READY FOR ACTION ON DECKS OF BATTLESHIP TEXAS

One of the sights which drew the fascinated gaze of visitors to the ships of the North Atlantic fleet, at New York, was the deck torpedo tubes of the dreadnought Texas. The picture on the right above shows the bottom half of the hinged tubes raised as to show the deadly missiles lying in their resting places like larvae in a wasp's nest. The torpedoes are set in motion by compressed air, their course being kept true by means of their rear propellers and gyroscope attachments. On the left is a typical torpedo of the short, blunt type favored by the American navy.
