A world with no rival enterprises and ambitions struggling upward; a world of eternal contentment in statu quo, would be a lotus enter's dream of changeless rest and nothingness.

Another Bunco Game by Councils DIRECTOR PORTER'S committee commends the work thus far accomplished toward making Holmesburg a model House of Correction, and advises many wise extensions in policy and organization. It recommends a dining room for the inmates in place of serving meals in the cells. It recommends running water and electric lights in the confinement quarters. It recommends the complete segregation of the women's department and many improvements therein. It recommends the exclusion of min rs and the establishment of better medical and psychopathic care for the sick and feeble-minded inmates. And it recommends that Councils do its obvious duty by appropriating funds to carry out the law of 1913, which provides

support for the dependent families of in-

How tiresome that phrase is getting: "By failing to make the necessary appropriation, Councils has-!" The trail of it is over phase after phase of public work. It is not merely a question of insufficient funds, of pitiable appropriations for playgrounds, hospitals, housing and police work. Here, as in many another case, it is the deliberate old trick of killing an act by providing no funds for its enforcement. Philadelphia has a law, a very fine law. But what earthly use is it, so long as the teeth are missing? Such conditions reach the height of the idiotic. They reflect on the mentality of lawmaking; they reflect on the mentality of lawmakers, and they reflect on the mentality of voters who let themselves be buncoed year after year by

The System Is Worth What It Costs THE conference between the consumers Land the Philadelphia Vegetable Growers' Association to discover who gets the difference between the wholesale and the retail

price of vegetables will have little difficulty in learning all about it.

such thimble-riggers.

The consumer pays for the convenience of having his potatoes and peas and beans delivered at his kitchen door when he wants them and in as small quantities as the needs equire. The telephone company gets part of the money, because every green-grocer has to have a telephone for the convenience of his customers. It is easier to send the order by telephone than to go to the store. The clerk who takes the order over the phone gets some more of the money, and the other clerk who fills the order gets more and the delivery boy also has to be paid by the consumer, and he has to pay also for the upkeep of the horse and wagon or the automobile used in delivering the goods. The middleman, who supplies to the corner grocer a large or small quantity of vegetables as he requires, also gets his share, and he is entitled to it. And so on, through the long chain of men that connects the farms with the kitchens, every man takes his toll.

And, after all, the consumer does not pay so much for his vegetables bought under the present system of distribution as they would cost him if he had to spend half a day going into the country to the producers to buy direct, if he counts his time as worth anything. We cannot have all the conveniences of the present system without paying for them. The majority of housekeepers think the conveniences are worth what they

And if the producers should attempt to make their deliveries direct to the consumers, they would doubtless discover that they would have to charge about what the retailers now get and that their margin of profit would not vary much from the present figures.

Mexico Needs a College President

THAT "authoritative announcement" of the state of mind in which the Administration is approaching the Mexican problem leaves much to be desired.

We are told that the real purpose of the revolution was accomplished a year ago when Huerta was everthrown and that the succooding events have not been in reality revolution at all, but mere factional fights.

This begs the whole question. Huerts was not overfhrown by his opponents in Mexico. If he had been let alone by the United States he might still have been in power. Huerta was starved out by President Wilson, who decided that no man whose hands were tainled with murder should be allowed to remain at the head of the Mexican Govern-The Mexicans have no such bigh signifiards. They are accustomed to summary executions and to the triumph of milltary dictators. And elections to them are merely a formal proceeding for registering the will of the roan on top. There never was a real election while Dian was President Those who offered themselves as candidates in opposition usually found it convenient to leave the country before the voting. The purpose of a Meximu revolution is to seize the control of the government and not to cust some one who is in control. This is the separate fact, and there is no use in tering to blins: it. The success the Administration acts as if it upderstood this conflicten the scener will at start on a strangatforward policy.

If it were not for the confused thinking

revealed in the statement about the "real purpose of the revolution." It would be possible to regard more hopefully the last of the group of sentences explaining the Mexican situation, which declares that the first problem to be solved is to find for a provisional President a man who represents the cause of the original revolutionists against Huerta.

As a matter of fact, the first problem to be solved is to find for provisional President a man with the will to restore order and the executive ability and military genius to make his will effective. It matters not whether he was in favor of Huerta or opposed to him, or whether he was in favor of Madero or supported one of the revolutionists who plotted the overthrow of the visionary weakling whose election every one who knew Mexico was confident would be followed by anarchy.

Mexico needs just now the kind of a benevolent despot who sits in the Fresident's chair in any one of the great American universities, a man with a firm hand and an iron will who will go about his work unterrified by any ructions in the faculty.

Pennsylvania's Labor Famine

THE glut in vegetables doesn't extend to Liabor. For the first time in a good many years there is literally more work than workers in the most important of Pennsylvania industries, mining, steel making and the metal trades in general. The vice president of the Carnegie Steel Company says: "The greatest labor famine industrial Pittsburgh has ever known is on its way." Where 300 men a day applied for jobs at Homestead a few months back, only 20 make application now, and the plant needs far more.

The Philadelphia office of the Federal Labor Bureau reports much the same situation in the metal trades hereabouts. Early in the year the bureau received 200 applications from metal trade workers a day; now the average has dropped to 10. Any machinist can get work.

Such "war prosperity" does not seem as yet to have penetrated deep into many other industries, while even the metal working factories farther west are still waiting for big war orders of the sort the East has drawn. Obviously the condition is local. Obviously every effort of organization is needed to relieve the stringent labor market here and benefit workers in other parts of the country. Just as obviously an institution like the Federal Labor Bureau is of extreme importance and utility in such circumstances. It cannot spread the prosperity over other parts of the country and other industries, but it can bring the men in to fill the jobs that are waiting. It can relieve both the stringency here and conditions of inemployment in other sections and trades. Fluidity of labor is a prime necessity of modern industry. This is a good time to take steps to secure it.

A Footnote on Preparedness

TT IS frankly impossible for any man to I prove that an adequate navy and a thoroughly maintained army would keep this country out of war. It is just as impossible for the pacifist to deny that without these safeguards the country is at the mercy of the world, or of any part which finds itself both belligerent and prepared.

That being so, a comparison of values is necessary. The British naval appropriation for 1914, amounted to \$250,000,000. The estimated military expenditure of the German Empire for the corresponding time was \$300,-000,000. These are the maximum appropriations of Europe. The singular and instructive thing about them is that together they represent the cost to England alone of running the war for one month.

No. There is no guarantee that by spending as much, or ten times as much, this country would be kept at peace. But it is made clear in the gaunt and sinister fires of Europe's purgation that unless we spend freely now we shall be called upon to spend much and bitterly later on. If we refuse to prepare, we are none the less preparing-for disasters!

East Bows to the West

No LONGER may the conservative East assert its athletic superiority over the progressive West. Twice this summer the two sections have measured their skill, speed and strength. And both times the West has

Last month we sent a team of our best tennis players to the Pacific coast only to see them slaughtered. Then, to show us that the result was not due to a fluke, the Westerners came East and are still engaged in the pleasant task of cleaning up our best Only last week we sent a carload of the best track athletes we could collect to the A. A. U. championships at San Francisco. The Middle West did likewise. Assuming that the population of the United States is evenly divided by a line drawn through Indiana, the Western half demonstrated its supremacy. Of the 19 events on the program the West furnished the winners in 11.

What does it mean? Simply this, that the Western universities and clubs are now getting the crop of athletes whose development started with the introduction of Eastern athletic methods into the Western public and private schools. Western hustle and courage have done the rest. It is now correct to say that westward the course of athletic supremacy takes its way.

How's your gold supply?

To jit or not to jit, that is the dilemma. Why do baby contests correspond with the

'silly season"?

At any rate nobody can say the Russians aren't skilful retreaters.

Every tramp this summer is not necessarily a Belgian refugee. A little piqued at the attention Warsaw

got last week, Gorisia threatens to totter a "Complaints of mosquito nuisance stung city bureaus to action." "Stung" is the

word. If "big navy" sentiment is growing in the West, then the country has learned a thing

"Man accused of burglary said to have posed as honest workman." Did any one say "plumber 17

"Ex-Senator Lorimer's favor sought by fillings candidates for office." It's in the newspapers, so it must be true.

If Uncle Sam ever gets out a rival to the Allies and Teston's state papers, it will doubtless be called a Negtral Tint Book.

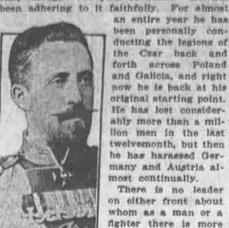

The wuman's "torch of victory" has moved over from New York to New Jersey and is headed in this direction for purposes of illumination on or about November 3.

RUSSIA'S HERO IS THE CZAR'S RIVAL

Grand Duke Nicholas the New Autocrat-Despite Reverses, He Is the One Man to Whom the Country Looks for Success.

By EDWARD R. BUSHNELL GRAND DUKE NICHOLAS, commanderrespectable meaning into that old adage:

He who fights and runs away will live to fight another day. That seems to be the Grand Duke's carefully thought out plan of battle. He has

whom as a man or a fighter there is more romance than the Grand Duke Nicholas.

In military genius he is considered the peer of them all. Indeed, if he had under him an army as well trained as that of Germany or France, a different tale might have been told of the operations on the Eastern front.

A Jovian Figure of a Man

Physically the Grand Duke is a commanding figure. He stands 6 feet 5 inches in height and is magnificently proportioned. Not only that, but artists attribute to him the possession of perfect facial features.

The Grand Duke has achieved his greatness in the face of tremendous obstacles. His physical attractiveness and his mental capacity made him an object of envy to the rest of the royal family. Alexander III, then the Czar, could not abide the sight of this youthful Jove, his cousin, when he contrasted him with his own puny, dull-eyed sons. The kingly bearing of the Grand Duke was the more pronounced as he grew into young manhood, when statesmen and peasants instinctively bowed before his regal bearing.

Alexander III hampered the progress of Nicholas and limited his activities to the cavalry, and it did not make him feel any better when the Grand Duke made his cavalry force the best in Europe. It was not until the present war broke out that the Grand Duke had his chance. Authorities differ concerning the means by which he secured command. It is pretty well understood that Czar Nicholas himself wished to lead his troops as supreme commander. Whether he was forced by the situation to offer the post to Grand Duke Nicholas or whether, as is stated in some quarters, the Grand Duke arbitrarily took command himself, is not clear. At any rate, it is known that the Grand Duke at once issued manifestoes on his own authority to both the Jews and the Poles which the Czar was compelled to respect.

The New Autocrat

So cleverly has the Grand Duke, though handlcapped by insufficient munitions, kept Germany and Austria engaged that his word is law in military matters. When the Czar is in Petrograd the Cabinet Council holds daffy sittings with him. But the Czar is not supreme. The war party backs the Grand Duke almost to a man, and the Czar dares not obstruct their plans.

To Grand Duke Nicholas must be given credit for having once saved the Czar. At the close of the disastrous war with Japan the country seethed with revolution and anarchy. The Czar was ready to flee, but the Grand Duke took command of the army, started a long line of political prisoners on their way to Siberia and by his complete reorganization of the military system restored order and saved the Czar. But little gratitude was shown him by the Czar, who, once his own safety had been secured, stripped the Grand Duke of most of his authority.

There exists in Russia a feeling that the issue of this bloody war may result in the

seating of the Grand Duke Nicholas on the throne. The throne has long been stained with blood, and it would not be difficult to conceive of a situation that would give the Grand Duke his opportunity. Should Russia. be overwhelmed, the people might eastly take their revenge on the Canri and if Russia wins. it will be due to the military ability of the Grand Duke Nicholas. That explains why the Coar is watching internal politics quite as closely as the developments of the war. It is also said to explain a return of the Czarina and her daughters to public prom-

The Grand Duke comes from a military family. His father, Nicholas Nicolaiwitch, was famed for his exploits as a soldier, but he had no standing in court. About the only legacy he left to his famous son was his magnificent physique and his debts.

The Grand Duke contracted a morganatio marriage with the widow of a merchant millionaire, though he was in love with the Princess Anastasia of Montenegro, then married to the Duke of Leuchtenberg. Almost immediately after the Princess secured a divorce the Grand Duke announced his plans for his marriage to her. The present Grand Duchess is of quite as striking appearance as the Grand Duke himself, and on more than one occasion has created a furore by her appearance at various court functions.

No Friend of Western Culture

The Grand Duke is an intensely religious man and Slavic to the core. He is one of the few men in Russia's official life who never became the slave of vodka or the ballet dancers. One of his ideals is that Russia shall not be contaminated with the ideals and manners of western Europe. He has always contended that Russia possessed & racial genius capable of developing without the aid of outside culture. This probably accounts for the popular impression that the Grand Duke is a reactionary. The strategy of the Grand Duke has been

the close study of military authorities. Considering the handicaps he had to overcome and the great superiority of the Teutons in munitions and military training, his performances are acknowledged to have been a tremendous success. It is true that he has lost an unheard-of number of men in killed, wounded and prisoners, but more marvelous yet is the manner in which he has carried on his daring invasions and still been able repeatedly to extricate his armles,

That neither Russia nor the Allies are cast down over the reverses on the eastern front is accounted for on the assumption that this sort of a campaign had been carefully planned. But it is a question whether or not the Russians are entirely pleased with the present situation. We were told by London during the first Russian invasion and the subsequent retreat that all this was being done to keep the Teutonic forces engaged in the East while the Allies drove the Germans back on the West. The Russians have done their part, but they can't see what advantage the Allies on the West have taken of their activity. It is a situation difficult enough to tax the patience of even the optimistic Russians.

THE CZAR IS A PROHIBITIONIST

The Tresveniki, a Russian sect that preaches nothing but temperance, drew up a great peti-tion, which, after ten weeks of the war and of enforced sobriety, was presented to the Czar, a petition for the prohibition of vodka forever. a petition for the prohibition of vodks forever. It seemed preposterous to ask the Czar for complete prohibition in the face of Russia's tremendous war debts. The Czar had promised that no more vodka should be sold until the end of the war, and that promise had been greeted with great satisfaction. But the impossible happened. The Czar not only received the petitioners, but answered them in the significant

"I had already decided on total prohibition before I read your petition."—Stephen Graham, in the World's Work.

HILLS

I never loved your plains!— Your gentle valleys, Your drowsy country lanes And pleached alleys

I want my hills!-the trail That scorns the hollow .-Up, up the ragged shale Where few will follow;

Up, over wooded crest And mossy bowlder, With strong thigh, heaving chest, And awinging shoulder.

So let me hold my way, By nothing halted, Until, at close of day, I stand, exalted,

High on my hills of dream— Dear hills that know me! And then, how fair will seem The lands below me!

How pure, at vesper-time, The far bells chiming!

God, give me hills to climb, And strength for climbing!

—Arthur Guiterman, in Scribner's.

POLA SINCE THE ANCIENT COLCHIANS

Austria's Naval Stronghold, Fortified on Modern Plans, Has a Varied History and Has Figured in Many Wars.

By ADALBERTO CAPORALE

I founded by a party of Colchians who had started in search of Medea, the sorceress, daughter of their King and famous now through Euripides' well-known tragedy, is today the naval stronghold of Austria, on the Adriatic Sea-a base which many naval authorities deem impregnable-or comparatively so, if there are degrees of impregnability. Certainly Pola, which for more than half a century has been a menace to the Italian coasts on the Adriatic, is so strongly protected by a chain of powerful forts and by the Brioni Islands guarding the entrance to the bay, that the Italian first, the commander-in-chief of which is the daring Duke of Abruzzi, has not attempted to train its guns on the city, and it has not been attacked otherwise than by a dirigible belonging to the Italian navy.

The military value of Pola was recognized as early as the time of the reign of Augustus. when the Romans attacked the city because it had sided with the Republicans, conquered it and made of it a fortified port. For five canturies the city belonged to the Romans, and nosily was annexed to the Byzantine empire. Belisarius used it as a base for his operations against the Goths who menaced Italy. Doge Morosini, of Venice, subjugated Pola to the control of the republic in 1148, but 44 years later it was conquered by the Pinans, who held it only a short time, for Enrico Dandelo, new Dogo of Venius, succeeded in taking it from the Pisans, only to be burned later on by Jacopo Tiepolo after an unsuccessful rebellion. After it had been the chief viotim of the wars between the Venetians and the Genoese. at the beginning of the 19th century, Napoleon got possession of the Istrian pontnsula by the treaty of Presburg, and sent a famous engineer. Beautemps-Reaupre, to select a hay in

the Adriatio See which could be made a naval

hase. The engineer selected Pols, but his

views were not accepted by Napotson, and

FTHE city which is believed to have been | and began to fortify the splendid bay, which on account of its being inclosed almost like a take and of offering only a narrow channel as entrance, and, furthermore, of being protected by the Brioni Islands, appeared as an ideal base of the Austrian navy, by which the Vienna Govenment had planned to hold the mastery of the Adriatic. The plan, however, was held in abeyance until 1856, when the work of building there a navy yard was begun. The fortress is therefore a comparatively modern one and has the advantage of being free of old and obsolete works on which to rely for defense. Later on Pola was connected to the interior of the peninsula and to Laibach and Flume with two double-track railroads, and a shippard was built there, giving work to nearly

Buch was the rapid development of Pola, foilowing its transformation into a naval base, that its population, which in 1868 was 16,324, had increased in 1910 to 70,500 inhabitants.

The interior of the bay is divided in two by a small Island, the northern part being the commercial port and the southern half the navy yard. The defensive value of Pola is increased by the fact that the nearby coast cannot be easily approached, and therefore the landing of troops north or south of the fortress is utterly difficult, if not impossible. Pola really dominates the whole northern section of the Adriatic Sea, where, on the Italian side. Venice is able only to defend herself and not to serve as a base for offunctive operations against the eastern shore. The Rulian fleet, however, has birchaded the whole Austrian coast, and the Austrian warships are compelled to remain in their bese, under cover of the powerful game crowning the heights around Pols. Will they come out, as they did in 1800 under Admiral Tegethoff, and give battle to the Duke of Abruant Or will the Italians, after overcoming the enemy's resistance on the Careo Plateau. invest the fortress from the land and the sea seven years inter Austria compled the pentusula | and starve the Austriana?

SIXTY THOUSAND WEEDS AND MORE

How to Get Aong With Them in the Suburbs-They're a Good Deal Like Folks-Coaxing Crops With Song a Proposed Method of Agriculture.

droop and wither.

You need not venture far afield in agriweeds. If you pot a plant or start a window box a host of unwelcome little strangers will bob up to greet you. Adolphus Commuter, taking his first crack at gardening, begins to learn in the latter weeks of June that there is an amazing multitude of seeds and root growths in the soil that he did not put there. Generally, he just rolls up his sleeves and goes after them, remarking the while. Occasionally he is a bit brash in his method of extirpation and up come his crops with the weeds. In the course of a decade or so he is able to discriminate with some small degree of skill.

There are codies of weeds. Darwin never got the run of more than a fraction of them. In the course of centuries all the legions of betanists the world over have listed only about 30,000 of them. It is estimated that there are easily twice that number and more crosses and hybrids appearing all the time. Yes, the weed family is large and varied, and, to many, pestiferous. You will never get along smoothly with them until you learn to deal with them philosphically. You will never get them all out, and if you should (by some miraculous method of manicuring) you may count on a fresh host of them blowing over from your neighbor's garden. Sweet-warbling birds will visit your premises, no matter how small or humble, bearing presents of more weeds. Rodents, canines and felines carry them to you. The balmy breezes of spring are as replete with them as they are crammed with microscopic and ultra-microscopic germs.

A Curious Oversight of Nature

Mean germs and mean weed seeds browse along in the air currents hand in hand. You inhale the weed seeds as you inhale the germs, but owing to a lack of sunlight and plant food and other benign essences in your midst you do not break out with a rash of bull nettle or prickly lettuce. It is a wonder that tramps do not sprout some of the hardy varieties of weeds, but there is no record of such an occurrence in the botanical archives, though I did read once of a hermit who grew a fuzzy coat of moss.

There are good and bad weeds, just as there are good and bad germs. As a matter of fact there are differences of opinion here and there as to just what weeds are. Some call them plants out of place, or butters-in among your pure breds, whereas others just set their teeth and refer to them as consarned pests. The common dandellon and ox-eyed daisy have a high place in the popular fancy because of their decorative qualities, but when they invade your lawn they are not so charming. Italians are extremely fond of dandelion greens, and you will see them going about in the springtime digging them up and filling canvas bags with them. I have a small lawn and invite all the dandelion lovers who come by to help themselves, but when they have filled their bags and gone on their way it seems that they have left a scandalous quantity of dandelions behind them.

Decorative Poison Ivy

Really the best thing to do in the case of weeds is to accept them as inevitable. There are human weeds just as there are weeds in plant life. If we can subdue our egotism sufficiently we can see pretty clearly that we are all weeds one way or another. We confine some of our more insidious weeds in prisons and our sociologists are forever trying to do something with the seed of these weeds. The whole theory of eugenics is based upon the theory of haphagard weed production. If we study each garden weed we pull up we need not strain the imagination to find some human analogy. There is the sprawly purslane, or pusley, which grows like a tangle of worms. "Mean as pusley" is a common simile in many farming communities, and there are few of us who have not in the course of years had some Neighbor Pusiev.

When you get right down under the skin of it, weeds are a whole lot like folks. The

ARMOR FOR SOLDIERS

Sir Arthur Conan Doyle Advocates Old

Roman Uniform.

Sir Arthur Conan Doyle writes in the London

Times advocating the use of protective armor

for soldiers attacking over open grounds. He

"As a man faces the hestile rifle fire his fore-

head and heart are the only points presented which are certainly vital. The former would

be protected by such a helmst as the French have evolved; the second should be covered by a curved plate of highly tempered steel, not more than a foot in diameter. With this simple light equipment the two centres of life are safe.

"A wound in the abdomen is no longer cer-tain death, thanks to the advances of surgery, but a third curve of steel st-apped across the ribs to the hip bones would ifford protection.

"But granting that individual life would be saved, this does not bear upon the capture of positions, since so many would fall wounded that the weight of the attack would be spent

before the stormers reached the trenches. For this, armor which would give complete protec-tion is needed, and since the weight of this is

"I picture a great number of plates held to-gether like the shields of the Romans, pushed by men who would crouch behind them.

by men who would crouch behind them.

"When one is disabled it can readily be dropped and the gap closed. Others could be fixed sideways upon wheels and used upon the fixed sideways upon wheels and used upon the fixed sideways upon wheels and used upon the fixed of the advance to prevent enflading fire.

"One 'tortoise' would attract the concentrated fire of the artillery, but as each company or platoon forms its own, these numerous armorplated bodies could rush with small loss over the space already chared as far as possible of obstacles and so have some chance of reaching the enemy's line, not as an exhausted fragment, but a vigorous atorning party with its numbers intact."

IN PRAISE OF CROQUET

Croquet is, doubtless, a mid-Victorian game, and that is the worst that can be said of it.

and that is the worst that can be said of it. It is gentle, polite, unstrenuous. The principals without retaxing her dignity. The athlete and the octogenerian may manipulate the maliet with squal skill. It is again for every one, a game which pleases without wearying, which kills time without killing energy, which brings one into the open but not inte undue perspiration.

inte undue perspiration.

In these days croquet is poob-pooled. Goif, with its long, rapid "blices," is popular; tennis, with its hoppings and skippings and its wavings of arms, is highly commended. But crequet is scorned as mellycoddish and effeminate.

nate.

In most things the escape from Victorian frippery and prudery and quiescence is a bleating. But eroquet deserves to be retained or resuscitated. For the tired man or woman who seeks wholestone and restful recreation, there is nothing better than a folid contest and the wickets under the apple trees. It is a property of contests and the wickets under the apple trees. It

pushed in front upon wheels.

than a man can readily carry, it must be

weed problem a joyful rather than a distressing and hopeless subject. the Victorians accomplished was in the war of mildness. A touch of mildness in these mal rushing times would be a definite benefit. When one is tired of reading or talking about the war, what could be a better contrast or refreshment than a game of croquet?—Cleveland Plais-Dealer,

NATIONAL POINT OF VIEW General Hindenburg has done enough to aim him a very respectable rank among the world's areat soldiers.—Springfield Republican

Fortunately, American mechanical genius is such that it will not be necessary to import from Europe any improved submarines that may be needed,—Washington Star.

Woman averywhere are taking more interest woman everywhere are taxing more into in aquatic accomplishments than ever before Natatoriums and swimming schools are receiving unwonted patronage. It is now considered to be just as important to know how to swim as it is to know how to play tennis, dance or to run an automobile,—Cincinnati Enquire

As between the Government of England and the Government of the United States, the peepis of the United States are with their own Government, just as they are with their own Government where the difference is with the German Government.—Kansas City Star.

Now is the time for some constructive all! rine under American traditions and budges principles. Anything less will make Government subsidy all the more likely.—Chicago Tribune.

In the face of the court decision that Julys Lindsey is in contempt, the common verdict will be that he has on his side to sustain, confe-

and encourage him the principles of integrill-fidelity and honor, and if he should be required to serve a term in fail, the servitude will be his everiasting credit and will constitute an el-ject lesson in teathing the boys in his count is ancity of confidence and virtue of fidelity. Nashville Tennessecan.
