EAT A LOT OF ICE CREAM Seventy-two thousand eggs and 22,000

pounds of butter were included in the con-tracts recently awarded by the Board of City Trusts for Girard College, where 1525 boys are now enrolled. But that quantity is ordered for only the next three months. Some idea of the great quantity of food con-sumed by the boys at the college is con-tained in the fact that in a single year they eat 247,842 eggs and 54,1981/2 pounds of butter.

The largest single item, however, in the ateward's list is milk. Girard College boys drink lots of milk. In one year they drank 408,380 quarks, representing an expenditure of \$35,080.54, which was an increase of about 70 per cent, over the consumption the previous year.

These statistics do not include the ice ream consumption. Ten thousand one hundred and fifty-three quarts of ice cream were eaten in 1914, representing a finan-cial outlay of \$3214.97, or more than 100 per cent. more than was spent for this

lainty in 1913. The steward's list contains practically verything in the category of foods, even ea, the use of which by the younger boys has been discontinued. That fact explains the largely increased consumption of milk, which also is frequently used for the midorning school lunch for the boys in the rimary department. The First Chief was very strong in his statement .hat the first American expedition was not an attempt to catch bandits.

"In spite of friendly words," said the General, "there has been no real co-operation on the part of the Americans. The taking of heavy cannon and all the impedimenta for a campaign into Mexico was not for bandits only. The Mexican people, who have waited patiently for three months, believing in the words of the United States, now believe that these words were not sincere, and are becoming indignant."

The First Chief repeated that Mexico does not want war, and that no attempt has or will be made by Mexico to cross into the United States. But he stated;
